SONOS

A Statement of Conformity for the DFS Client Device

The Sonos PLAY:1 wireless communication is restricted to the 2.4 GHz channels when operating in a standalone or stereo pair configuration. The Sonos PLAY:1 cannot initiate any 5 GHz wireless transmissions, this includes transmissions for beacons and support for ad-hoc peer-to-peer modes.

Sonos PLAY:1 when paired to the Sonos PLAYBAR is automatically configured as a DFS client device. The Sonos PLAYBAR (master) initiates and controls all 5 GHz wireless communications with the Sonos PLAY:1.
