7. MEASUREMENT AND PRESENTATION OF TEST DATA

7.1. Test System

The measurement and graphical data presented in this test report was generated automatically using state-of-the-art technology creating an easy to read report structure. Numerical measurement data is separated from supporting graphical data (plots) through hyperlinks. Numerical measurement data can be reviewed without scrolling through numerous graphical pages to arrive at the next data matrix.

Plots have been relegated into the Appendix 'Graphical Data'.

Test and report automation was performed by [MiTest](#). [MiTest](#) is an automated test system developed by MiCOM Labs. [MiTest](#) is the first cloud based modular test system enabling end-to-end automation of regulatory compliance testing for conducted RF testing.

7.2. Control of Test Item

The EUT was controlled via the Sonos GUI. This gave access to operational channels, output power and antenna port activation. As the device was a 4x4 MIMO all the antenna ports were activated to operate simultaneously during conducted and radiated testing. Duty cycle was fixed as reported in Section 8.3.

The power setting reported in TUVR116-U6_Conducted Addendum Peak Transmit Power is the final power setting found in order to prove compliance for radiated and conducted testing for the Sonos S23.

Output Power

In the case of average power measurements an average power sensor was utilized using connected to each antenna port. Power measurements on all ports were measured simultaneously, the EUT was set to transmit maximum power during the test program (compliant power setting logged for each test mode). As the Duty Cycle was constant (see Section 8.2 Operational Mode Duty Cycle) the duty cycle correction factor was used to correct the power reading.

The lowest data rate for each operational mode was used to exercise the test sample:

802.11a – 6 Mbit/s

802.11n HT-20 – 6.5 Mbit/s

7.3. Operational Mode Duty Cycle(s)

Results for system Duty Cycle for the following configurations are measured and reported below:
