#### 1.0 GENERAL

#### 1.1 Purpose

The purpose of this report is to demonstrate compliance with Part 2 Subpart J, and Part 90 Subpart I of the FCC's Code of Federal Regulations for a Class 2 Permissive Change.

The objective of the Class 2 Permissive Change is to add the 464.6625 MHz - 464.7125 MHz band to the filing. There are no hardware or power changes on the product.

# **1.2 Product Description**

The 520Q is a transceiver module that is configured using an RF interface. The unit provides wireless communication capability to a variety of register read, TouchCoupler water meters and TFRs.

The 520Q can be connected to one or two meters simultaneously each of independent type and protocol. The device will communicate via the Sensus fixed wireless telemetry network to provide meter readings and diagnostic data from the meter to the utility provider via radio.

Manufacturer Information: Sensus Metering Systems, Inc. 639 Davis Drive Morrisville, NC 27560

Test Sample Serial Numbers: 14003036 (Radiated Emissions), 14003008 (RF Conducted)

Test Sample Condition: The unit was in good operating conditions with no physical damages.

#### 1.3 Test Methodology

#### **1.3.1** Configurations and Justification

The 520Q was tested in accordance to WT Docket No. 11-56, DA 11-1316 which waives 47 CFR 90.203(j) from the test requirements. The 520Q provides multiple modulations formats/modes all of which were evaluated and the worst case data are presented were applicable.

For the RF conducted measurements, the EUT was modified with a temporary RF connector at the antenna port. Compliance for the frequency behavior is documented during the original certification effort and this test was not repeated during this evaluation.

For radiated emissions, the EUT was evaluated in the orientation of typical installation.

The evaluation for unintentional emissions is documented separately in a verification report.

# 1.3.2 In-Band Testing Methodology

The EUT band of operation is provided in the table below.

| CFR Title 47 Rule Part | Frequency Band of Operation<br>(MHz) |
|------------------------|--------------------------------------|
| 90                     | 451.0375 – 454.0                     |
| 90                     | 456.0 - 462.5375                     |
| 90                     | 462.7375 – 463.7875                  |
| 90                     | 464.6625 - 464.7125                  |

The evaluation effort addresses the additional band of 464.6625 MHz – 464.7125 MHz. Based on the requirements set forth in accordance 47 CFR 2.1046-2.1057 as stated above, the methodology in selecting the places to test in the available bands of operation is outlined in the following table.

| CFR Title 47 Rule Part | Frequency Band of<br>Operation<br>(MHz) | Location in the<br>Range of Operation | Approx. Test Freq. |
|------------------------|---|---------------------------------------|--------------------|
| 90                     | 464.6625 - 464.7125                     | middle                                | 464.6875           |

# 1.4 Emission Designators

The 520Q transmitter produces seven distinct modulation formats as documented in the original filing. The 464.6625 MHz – 464.7125 MHz band uses two modulations. The emissions designators for the modulation types used by the 520Q transmitter are as follows:

EMISSIONS DESIGNATORS:

MPass Mode (5 kbps): 5K90F1D MPass Mode (10 kbps): 11K8F1D

# 2.0 TEST FACILITIES

# 2.1 Location

Unless otherwise noted, the radiated and conducted emissions test sites are located at the following addresses.

Advanced Compliance Solutions, Inc. 3998 FAU Blvd, Suite 310 Boca Raton, Florida 33431 Phone: (561) 961-5585 Fax: (561) 961-5587 www.acstestlab.com

FCC Test Firm Registration Number: 475089

# 2.2 Laboratory Accreditations/Recognitions/Certifications

ACS, Boca Raton, Florida, is accredited to ISO/IEC 17025 by ANSI-ASQ National Accreditation Board under their ANAB program and has been issued certificate number AT-1533 in recognition of this accreditation.

## 2.3 Radiated & Conducted Emissions Test Site Description

#### 2.3.1 Semi-Anechoic Chamber Test Site

The EMC radiated test facility consists of an RF-shielded enclosure. The interior dimensions of the indoor semi-anechoic chamber are approximately 48 feet (14.6 m) long by 36 feet (10.8 m) wide by 24 feet (7.3 m) high and consist of rigid, 1/8 inch (0.32 cm) steel-clad, wood core modular panels with steel framing. In the shielded enclosure, the faces of the panels are galvanized and the chamber is self-supporting. 8-foot RF absorbing cones are installed on 4 walls and the ceiling. The steel-clad ground plane is covered with vinyl flooring.

The turntable is driven by pneumatic motor, which is capable of supporting a 2000 lb. load. The turntable is flush with the chamber floor which it is connected to, around its circumference, with metallic loaded springs. An EMCO Model 1051 multi-device controller controls the turntable position.

A pneumatic motor is used to control antenna polarizations and height relative to the ground. The height information is displayed on the control unit EMCO Model 1050.

The control room is an RF shielded enclosure attached to the semi-anechoic chamber with two bulkhead panels for connecting RF, and control cables. The dimension of the room is 7.3 m x 4.9 m x 3 m high and the entrance doors of both control and conducted rooms are 3 feet (0.91 m) by 7 feet (2.13 m).

A diagram of the Semi-Anechoic Chamber Test Site is shown in Figure 2.3.1-1 below:

Figure 2.3.1-1: Semi-Anechoic Chamber Test Site

# 2.3.2 Conducted Emissions Test Site Description

The dimensions of the shielded conducted room are 7.3 x 4.9 x 3 m<sup>3</sup>. Power line conducted emission data is taken using two LISNs; a Solar Model 8028-50 50  $\Omega$ /50  $\mu$ H and an EMCO Model 3825, which are installed as shown in Photograph 3. For evaluations requiring 230 V, 50 Hz, a Polarad LISN (S/N 879341/048) is used in conjunction with a 1 kVA, 50 Hz/230 V EDGAR variable frequency generator, Model 1001B.

A diagram of the room is shown below in figure 2.3.2-1:

# 7.0 SUMMARY OF TESTS

Along with the tabular data shown below, plots were taken of all signals deemed important enough to document.

| Test Parameter                          | Test Summary |
|---|--------------|
| RF Power Output                         | Pass         |
| Occupied Bandwidth (Emissions Limits)   | Pass         |
| Spurious Emissions at Antenna Terminals | Pass         |
| Field Strength of Spurious Emissions    | Pass         |
| Frequency Stability                     | Pass         |

# Table 7-1: Test Results Summary

# 7.1 RF Power Output

# 7.1.1 Measurement Procedure

The RF output of the equipment under test was directly connected to the input of the Spectrum Analyzer through 30 dB of passive attenuation. The resolution and video bandwidths of the spectrum analyzer were set at sufficient levels, >> signal bandwidth, to produce accurate results. The internal correction factors of the spectrum analyzer were employed to correct for any cable or attenuator losses. Results are shown below.

## 7.3 Spurious Emissions at Antenna Terminals

#### 7.3.1 Measurement Procedure

The RF output of the equipment under test was directly connected to the input of the Spectrum Analyzer through 30 dB of passive attenuation. The spectrum analyzer resolution bandwidth was set to 100 kHz below 1000 MHz and 1 MHz above 1000 MHz. The internal correction factors of the spectrum analyzer were employed to correct for any cable, attenuator or filter losses. The spectrum was investigated in accordance to CFR 47 Part 2.1057. Results are shown below.

# 7.4 Field Strength of Spurious Emissions

#### 7.4.1 Measurement Procedure

The equipment under test is placed in the Semi-Anechoic Chamber (described in section 2.3.1) on a wooden table at the turntable center. For each spurious emission, the antenna mast is raised and lowered from one (1) to four (4) meters and the turntable is rotated 360° and the maximum reading on the spectrum analyzer is recorded. This was repeated for both horizontal and vertical polarizations of the receive antenna.

The equipment under test is then replaced with a substitution antenna fed by a signal generator. The signal generator's frequency is set to that of the spurious emission recorded from the equipment under test. The antenna mast is raised and lowered from one (1) to four (4) meters to obtain a maximum reading on the spectrum analyzer. The output of the signal generator is then adjusted until the reading on the spectrum analyzer matches that obtained from the equipment under test. The signal generator level is recorded. The power in dBm of each spurious emission is calculated by correcting the signal generator level for the cable loss and gain of the substitution antenna referenced to a dipole. The spectrum was investigated in accordance to CFR 47 Part 2.1057.

The magnitude of all spurious emissions not reported were attenuated below the noise floor of the measurement system and therefore not specified in this report. Results are shown below.

Table 7.4.2-1: Field Strength of Spurious Emissions – 464.6875 MHz

NOTE: All frequencies not listed were below the noise floor of the spectrum analyzer.

# 7.5 Frequency Stability

# 7.5.1 Measurement Procedure

The equipment under test is placed inside an environmental chamber. The RF output is directly coupled to the input of the measurement equipment and a power supply is attached to the primary supply voltage.

Frequency measurements were made at the extremes of the of temperature range  $-30^{\circ}$  C to  $+50^{\circ}$  C and at intervals of  $10^{\circ}$  C at normal supply voltage. A period of time sufficient to stabilize all components of the equipment was allowed at each frequency measurement. At a temperature  $20^{\circ}$  C the measurements were performed at 85% and 115% of the EUT nominal voltage. The maximum variation of frequency was recorded.

# **8.0 CONCLUSION**

In the opinion of ACS, Inc. the model 520Q, manufactured by Sensus Metering Systems, Inc., meets the requirements of FCC Part 90 Subpart I for the tests documented in this test report, as applicable.
