Excellence in Compliance Testing

Certification Test Report

FCC ID: SDBM400BV01
IC: 2220A-M400BV01

FCC Rule Part: CFR 47 Part 24 Subpart D
IC Radio Standards Specification: RSS 134

ACS Report Number: 13-2043.W06.1A

Applicant: Sensus Metering Systems, Inc.
Model: M400B-01

Test Begin Date: April 7, 2013
Test End Date: April 19, 2013

Report Issue Date: April 29, 2013

ACCREDITED TESTING

For The Scope of Accreditation Under Certificate Number AT-1533

For The Scope of Accreditation Under Lab Code 200612-0

This report must not be used by the client to claim product certification, approval, or endorsement by ACLASS, NVLAP, ANSI, or any agency of the Federal Government.

Table of Content

1.0 GENERAL

1.1 Purpose

The purpose of this report is to demonstrate compliance with the specific test requirements of Part 2 Subpart J, and Part 24 Subpart D of the FCC's Code of Federal Regulations, and Industry Canada Radio Standards Specifications RSS-134.

1.2 Product Description

The Sensus FlexNet M400B-01 consists of the M400XCVR-00 transceiver, PA module and a high isolation duplexer in a cabinet configuration. The output power of the M400B-01 ranges from 1W to 8W.

Manufacturer Information:
Sensus Metering Systems, Inc.
639 Davis Drive
Morrisville, NC 27560

Test Sample Serial Numbers: C56 (Cabinet), 180503130500008 (M400XCVR-00), SMS5396335800005 (PA), 0000104 (Duplexer).

Test Sample Hardware Revisions:
RF: R3.1, BOMr03 3/8/13
Digital: R3.1, BOMr03 1/15/13

Test Sample Software Revisions:
RF: 2.B
TIP: 2.A
DSP: 1.8
FPGA: 5.9

Test Sample Condition: The unit was in good operating conditions with no physical damages.

1.3 Test Methodology

1.3.1 Configurations and Justification

The EUT was tested for radiated emissions and RF conducted measurements at the antenna port. The evaluation was performed for both low and high power modes of operation. The EUT provides multiple data rates, where applicable data is provided for the configuration corresponding to the worst case.

The radiated emissions measurements were performed up to the 10^{th} harmonic with a 50 ohm termination at the RF output. The unit was evaluated in the orientation of typical installation.

The RF conducted measurements were collected at the RF output via suitable attenuation.

The EUT was also evaluated for unintentional emissions. The results are provided in a separately in a verification test report.

1.3.2 In-Band Testing Methodology

The following is a list of the frequency bands of operation sorted based on the FCC rule parts in which the band is associated.

CFR Title 47 Rule Part	Frequency Band of Operation (MHz)
24D	940.0 - 941.0

1.4 Emission Designators

The M400B-01 transmitter produces four distinct modulation formats. The emissions designators for the modulation types used by the M400B-01 transmitter are as follows:

EMISSIONS DESIGNATORS:

mPass mode (5 kbps): 5K90F1D
mPass mode (10 kbps): 11K8F1D
m4Pass mode (10 kbps): 8K75F1D
m4Pass mode (20 kbps): 17K5F1D

2.0 TEST FACILITIES

2.1 Location

The radiated and conducted emissions test sites are located at the following address:

Site 1
Advanced Compliance Solutions, Inc.
3998 FAU Blvd, Suite 310
Boca Raton, Florida 33431
Phone: (561) 961-5585
Fax: (561) 961-5587

Site 2
Advanced Compliance Solutions, Inc.
5015 B.U. Bowman Drive
Buford GA 30518
Phone: (770) 831-8048
Fax: (770) 831-8598
www.acstestlab.com

FCC Test Firm Registration #: 587595
Industry Canada Lab Code: 4175C

2.2 Laboratory Accreditations/Recognitions/Certifications

Site 1
ACS, Boca Raton, Florida, is accredited to ISO/IEC 17025 by ANSI-ASQ National Accreditation Board under their ACLASS program and has been issued certificate number AT-1533 in recognition of this accreditation.

Site 2
ACS, Buford, GA is accredited to ISO/IEC 17025 by the National Institute of Standards and Technology under their National Voluntary Laboratory Accreditation Program (NVLAP).

Unless otherwise specified, all test methods described within this report are covered under the respective test site ISO/IEC 17025 scope of accreditation.

2.3 Radiated & Conducted Emissions Test Site Description

2.3.1 Semi-Anechoic Chamber Test Site

The EMC radiated test facility consists of an RF-shielded enclosure. The interior dimensions of the indoor semi-anechoic chamber are approximately 48 feet (14.6 m) long by 36 feet (10.8 m) wide by 24 feet (7.3 m) high and consist of rigid, 1/8 inch (0.32 cm) steel-clad, wood core modular panels with steel framing. In the shielded enclosure, the faces of the panels are galvanized and the chamber is self-supporting. 8-foot RF absorbing cones are installed on 4 walls and the ceiling. The steel-clad ground plane is covered with vinyl floor.

The turntable is driven by pneumatic motor, which is capable of supporting a 2000 lb. load. The turntable is flushed with the chamber floor which it is connected to, around its circumference, with metallic loaded springs. An EMCO Model 1051 Multi-device Controller controls the turntable position.

A pneumatic motor is used to control antenna polarizations and height relative to the ground. The height information is displayed on the control unit EMCO Model 1050.

The control room is an RF shielded enclosure attached to the semi-anechoic chamber with two bulkhead panels for connecting RF, and control cables. The dimension of the room is 7.3 m x 4.9 m x 3 m high and the entrance doors of both control and conducted rooms are 3 feet (0.91 m) by 7 feet (2.13 m).

A diagram of the Semi-Anechoic Chamber Test Site is shown in Figure 2.3.1-1 below:

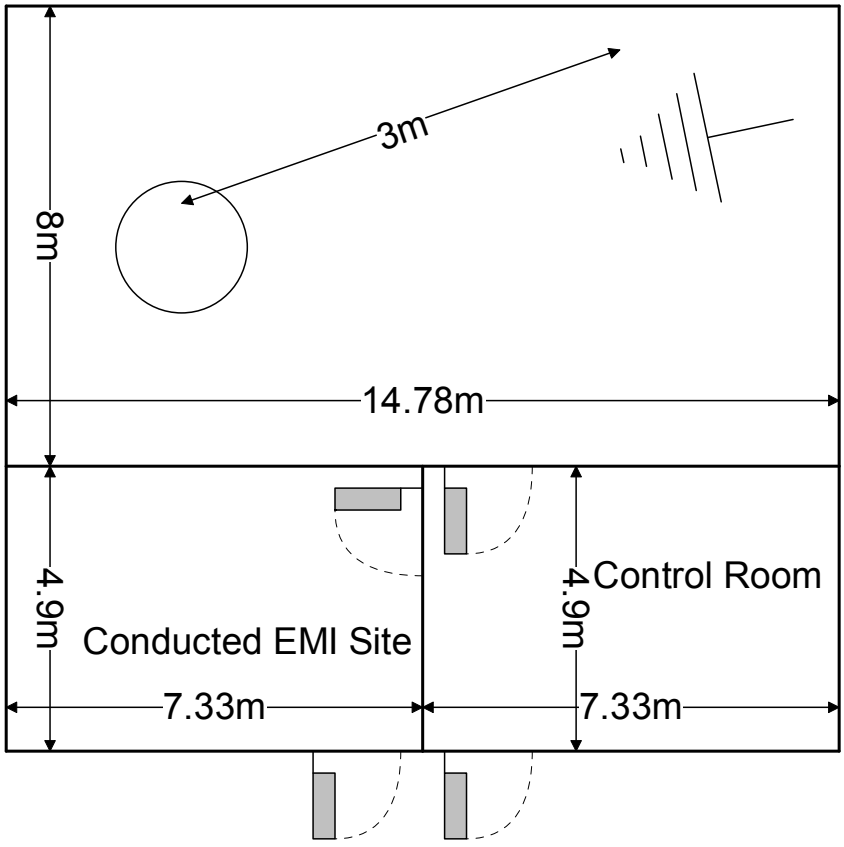

Figure 2.3.1-1: Semi-Anechoic Chamber Test Site

2.3.2 Conducted Emissions Test Site Description

The dimensions of the shielded conducted room are 7.3 x 4.9 x 3 m^3. As per ANSI C63.4 2003 requirements, the data were taken using two LISNs; a Solar Model 8028-50 50 Ω/50 µH and an EMCO Model 3825, which are installed as shown in Photograph 3. For 220 V, 50 Hz, a Polarad LISN (S/N 879341/048) is used in conjunction with a 1 kVA, 50 Hz/220 V EDGAR variable frequency generator, Model 1001B, to filter conducted noise from the generator.

A diagram of the room is shown below in figure 2.3.2-1:

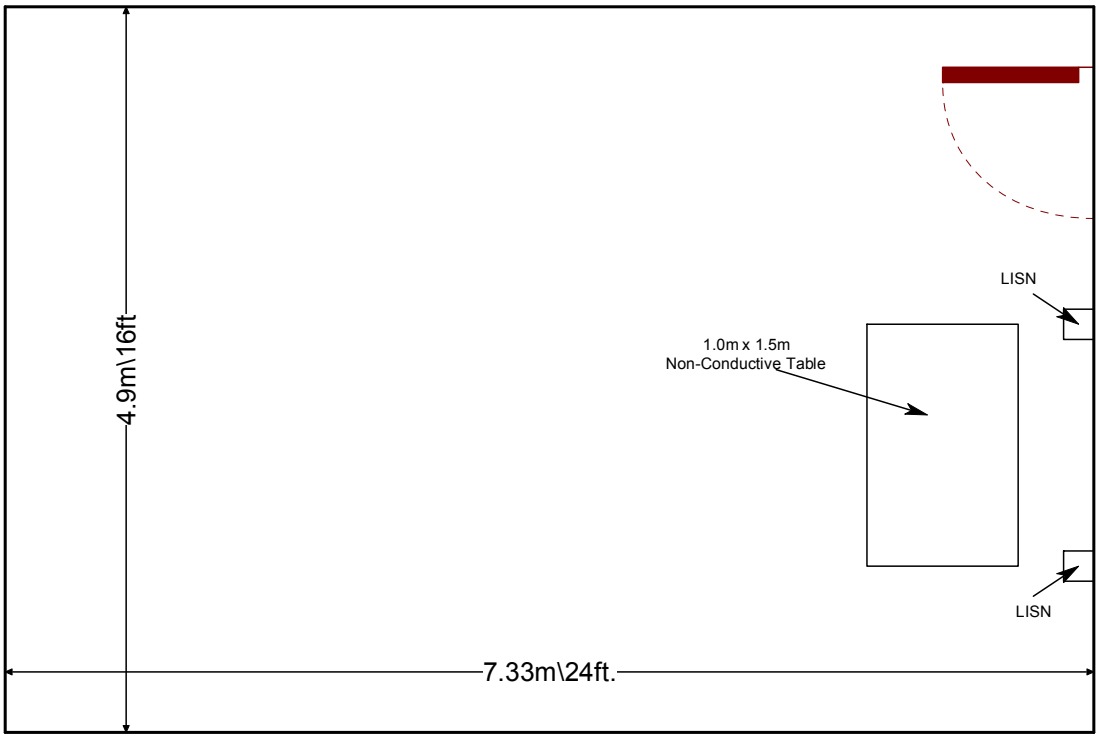

Figure 2.3.2-1: AC Mains Conducted EMI Site

7.0 SUMMARY OF TESTS

Along with the tabular data shown below, plots were taken of all signals deemed important enough to document.

Table 7-1: Test Results Summary

Test Parameter	Test Site	Test Summary
RF Power Output	1	Pass
Occupied Bandwidth (Emissions Limits)	1	Pass
Spurious Emissions at Antenna Terminals	1	Pass
Field Strength of Spurious Emissions	1	Pass
Frequency Stability	2	Pass

7.1 RF Power Output

7.1.1 Measurement Procedure

The RF output of the equipment under test was directly connected to the input of the Spectrum Analyzer through 35 dB of passive attenuation. The resolution and video bandwidths of the spectrum analyzer were set at sufficient levels, >> signal bandwidth, to produce accurate results. The internal correction factors of the spectrum analyzer were employed to correct for any cable or attenuator losses. Results are shown below.

7.1.2 Measurement Results

Table 7.1.2-1: Peak Output Power

Frequency (MHz)	FCC Rule Part	Output Power (Low Power) (dBm)	Output Power (High Power) (dBm)
940.5	24D	29.77	38.51

Part 24.132 / RSS-134 5.4(a)

Low Power

High Power

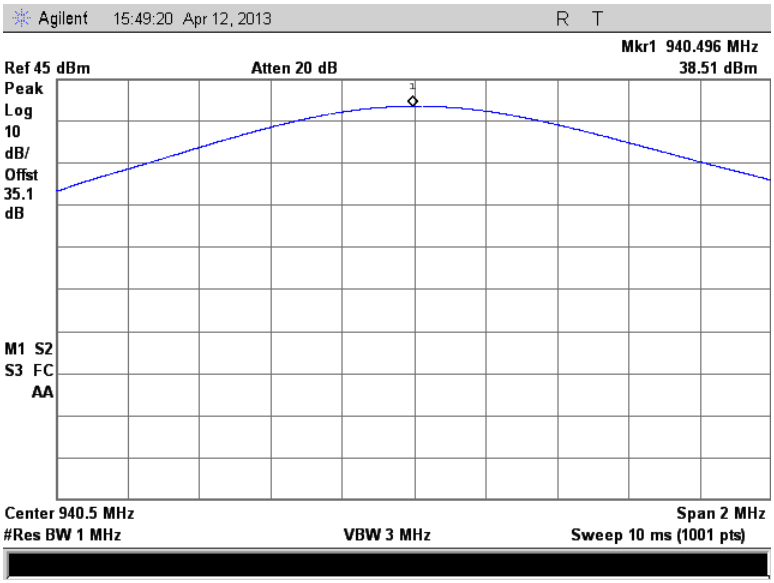

Figure 7.1.2-2: Peak Output Power - 940.5 MHz

7.2 Occupied Bandwidth (Emission Limits)

7.2.1 Measurement Procedure

The RF output of the equipment under test was directly connected to the input of the Spectrum Analyzer through 35 dB of passive attenuation. The spectrum analyzer resolution and video bandwidths were set to 300 Hz and 3000 Hz respectively. The internal correction factors of the spectrum analyzer were employed to correct for any cable or attenuator losses. Results of the test are shown below for all modes of operation.

7.3 Spurious Emissions at Antenna Terminals

7.3.1 Measurement Procedure

The RF output of the equipment under test was directly connected to the input of the Spectrum Analyzer through 35 dB of passive attenuation. The spectrum analyzer resolution bandwidth was set to 100 kHz below 1000 MHz and 1 MHz above 1000 MHz. The internal correction factors of the spectrum analyzer were employed to correct for any cable, attenuator or filter losses. The spectrum was investigated in accordance to CFR 47 Part 2.1057. Results are shown below.

7.4 Field Strength of Spurious Emissions

7.4.1 Measurement Procedure

The equipment under test is placed in the Semi-Anechoic Chamber (described in section 2.3.1) on a wooden table at the turntable center. For each spurious emission, the antenna mast is raised and lowered from one (1) to four (4) meters and the turntable is rotated 360º and the maximum reading on the spectrum analyzer is recorded. This was repeated for both horizontal and vertical polarizations of the receive antenna.

The equipment under test is then replaced with a substitution antenna fed by a signal generator. The signal generator's frequency is set to that of the spurious emission recorded from the equipment under test. The antenna mast is raised and lowered from one (1) to four (4) meters to obtain a maximum reading on the spectrum analyzer. The output of the signal generator is then adjusted until the reading on the spectrum analyzer matches that obtained from the equipment under test. The signal generator level is recorded. The power in dBm of each spurious emission is calculated by correcting the signal generator level for the cable loss and gain of the substitution antenna referenced to a dipole. The spectrum was investigated in accordance to CFR 47 Part 2.1057.

The magnitude of all spurious emissions not reported were attenuated below the noise floor of the measurement system and therefore not specified in this report. Results are shown below.

7.4.2 Measurement Results

Part 24.133 a(1), a(2), RSS-134 6.3(i), (ii)

Low Power

Table 7.4.2-1: Field Strength of Spurious Emissions – 940.5 MHz

Frequency (MHz)	Spectrum Analyzer Level (dBm)	Antenna Polarity (H/V)	Spurious ERP (dBm)	Limit (dBm)	Margin (dB)
1881	-43.40	H	-40.66	-13.00	27.66
2821.5	-30.80	H	-21.89	-13.00	8.89
3762	-55.75	H	-48.12	-13.00	35.12
4702.5	-60.30	H	-58.47	-13.00	45.47
5643	-60.40	H	-49.23	-13.00	36.23
1881	-44.45	V	-41.56	-13.00	28.56
2821.5	-34.45	V	-24.84	-13.00	11.84
3762	-57.30	V	-50.17	-13.00	37.17
4702.5	-60.50	V	-58.02	-13.00	45.02
5643	-60.85	V	-51.43	-13.00	38.43

NOTE: All frequencies not listed were below the noise floor of the spectrum analyzer.

High Power

Table 7.4.2-2: Field Strength of Spurious Emissions – 940.5 MHz

Frequency (MHz)	Spectrum Analyzer Level (dBm)	Antenna Polarity (H/V)	Spurious ERP (dBm)	Limit (dBm)	Margin (dB)
1881	-43.40	H	-41.06	-13.00	28.06
2821.5	-30.15	H	-21.39	-13.00	8.39
3762	-53.40	H	-44.57	-13.00	31.57
4702.5	-60.65	H	-59.32	-13.00	46.32
6583.5	-56.65	H	-42.14	-13.00	29.14
1881	-42.90	V	-39.71	-13.00	26.71

3762	-54.70	V	-45.62	-13.00	32.62

NOTE: All frequencies not listed were below the noise floor of the spectrum analyzer.

7.5 Frequency Stability

7.5.1 Measurement Procedure

The equipment under test is placed inside an environmental chamber. The RF output is directly coupled to the input of the measurement equipment and a power supply is attached to the primary supply voltage.

Frequency measurements were made at the extremes of the of temperature range -30º C to +50º C and at intervals of 10º C at normal supply voltage. A period of time sufficient to stabilize all components of the equipment was allowed at each frequency measurement. At a temperature 20º C the measurements were performed at 85% and 115% of the EUT nominal voltage. The maximum variation of frequency was recorded.

Since the EUT falls under multiple rule parts, the most stringent ppm limit from the different rule parts was applied for the measurements. The results of the tests are shown below.

7.5.2 Measurement Results

Part 24.135, RSS-134 (7)

Frequency Stability

Frequency (MHz): 940.5
Deviation Limit (PPM): 1ppm

Temperature	Frequency	Frequency Error	Voltage	Voltage
C	MHz	(PPM)	(%)	(VAC)

8.0 CONCLUSION

In the opinion of ACS, Inc. the model M400B-01, manufactured by Sensus Metering Systems, Inc., meets all the requirements of FCC Part 24D as well as Industry Canada RSS-134 where applicable.

End Report
