USA

FCC ID: SDV480ICT
New Product Name: 480i CT

Federal Communications Commission,

Aastra Telecom Inc. would like to request a new FCC application for our 480i CT Cordless IP Phone product.

The new 480i CT product consists of RF components from our existing certificated CM-16 base and cordless handset product (FCC ID: SDVCM16).

The changes made to the new product are as follows:

- We have merged the original CM-16 base RF components into the base plastics of our 480i IP Phone to create the 480i CT Cordless IP Phone.
- The same RF module in the base and handset, frequencies, etc have been maintained from the CM-16 product.
- The physical CM-16 handset was not changed at all. Only the CM-16 handset software was changed to improve the telephony user-interface for the consumer.
- No changes were made to the RF characteristics between the base and handset compared to the existing CM-16 product.

Since the physical CM-16 handset was not changed, we have referenced the previous CM-16 SAR report. Updated schematics and parts lists accompany this application to support this request.

Please contact me if you require any further information.

Regards,

James Wong
