

# TEST REPORT

**Test Report No. : UL-RPT-RP14585110-116A**

**Customer** : Ubisense  
**Model No / PMN** : UBISENSOR30V1  
**HVIN** : UBISENSOR30V1  
**FCC ID** : SEASENSOR33  
**ISED Certification No.** : IC: 8673A-SENSOR33  
**Technology** : IEEE 802.15.4 f  
**Test Standard(s)** : FCC Parts 15.207, 15.209(a) & 15.249  
Innovation, Science and Economic Development Canada  
RSS-210 10 April 2020 & RSS-Gen Issue 5 February 2021  
**Test Laboratory** : UL International (UK) Ltd, Basingstoke, Hampshire, RG24 8AH,  
United Kingdom

1. This test report shall not be reproduced except in full, without the written approval of UL International (UK) Ltd.
2. The results in this report apply only to the sample(s) tested.
3. The sample tested is in compliance with the above standard(s).
4. The test results in this report are traceable to the national or international standards.
5. Version 4.0 supersedes all previous versions.

**Date of Issue:** 24 March 2023

**Checked by:**

Ben Mercer  
Lead Project Engineer, Radio Laboratory

**Company Signatory:**

Sarah Williams  
Operations Leader, Radio Laboratory

## **1 Attestation of Test Results**

### **1.1 Description of EUT**

The equipment under test was an ultra-wideband location tracking sensor, incorporating a proprietary 2.4 GHz 802.15.4 f based radio.

### **1.2 General Information**

<b>Specification Reference:</b>	47CFR15.249
<b>Specification Title:</b>	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Section 15.249
<b>Specification Reference:</b>	47CFR15.207 & 15.209
<b>Specification Title:</b>	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) – Sections 15.207 & 15.209
<b>Specification Reference:</b>	RSS-Gen Issue 5 February 2021
<b>Specification Title:</b>	General Requirements for Compliance of Radio Apparatus
<b>Specification Reference:</b>	RSS-210 Issue 10 April 2020

 = Complied  = Did not comply			

#### **Note(s):**

1. Duty cycle measurements were performed to assist in the calculation of average levels as the EUT was not constantly transmitting.

### **1.4 Deviations from the Test Specification**

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specification identified above.

## **2 Summary of Testing**

### **2.1 Facilities and Accreditation**

The test site and measurement facilities used to collect data are located at Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom. The following table identifies which facilities were utilised for radiated emission measurements documented in this report. Specific facilities are also identified in the test results sections.

Site 1	X
Site 2	-
Site 17	-

UL International (UK) Ltd is accredited by the United Kingdom Accreditation Service (UKAS). UKAS is one of the signatories to the International Laboratory Accreditation Co-operation (ILAC) Arrangement for the mutual recognition of test reports. The tests reported herein have been performed in accordance with its terms of accreditation.

### **2.2 Methods and Procedures**

<b>Reference:</b>	ANSI C63.10-2013
<b>Title:</b>	American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices
<b>Reference:</b>	KDB 174176 D01 Line Conducted FAQ v01r01 June 3, 2015
<b>Title:</b>	AC Power-Line Conducted Emissions Frequently Asked Questions

## **2.3 Calibration and Uncertainty**

### **Measuring Instrument Calibration**

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

### **Measurement Uncertainty & Decision Rule**

#### **Overview**

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

#### **Decision Rule**

The decision rule applied is based upon the accuracy method criteria. The measurement uncertainty is met and the result is considered in conformance with the requirement criteria if the observed value is within the prescribed limit.

#### **Measurement Uncertainty**

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document “approximately” is interpreted as meaning “effectively” or “for most practical purposes”.

<b>Measurement Type</b>	<b>Range</b>	<b>Confidence Level (%)</b>	<b>Calculated Uncertainty</b>
Fundamental Field Strength	2400 MHz to 2483.5 MHz	95%	±3.16 dB
20 dB Bandwidth	2400 MHz to 2483.5 MHz	95%	±4.59 %
Radiated Spurious Emissions	9 kHz to 30 MHz	95%	±5.32 dB
Radiated Spurious Emissions	30 MHz to 1 GHz	95%	±3.30 dB
Radiated Spurious Emissions	1 GHz to 25 GHz	95%	±3.16 dB
AC Conducted Spurious Emissions	0.15 MHz to 30 MHz	95%	±2.42 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.

## **2.4 Test and Measurement Equipment**

### **Test Equipment Used for Transmitter Fundamental Field Strength, Transmitter 20 dB Bandwidth, 99% Emission Bandwidth & Transmitter Band Edge Radiated Emissions**

### **3 Equipment Under Test (EUT)**

#### **3.1 Identification of Equipment Under Test (EUT)**

<b>Brand Name:</b>	Ubisense
<b>Model Name or Number / PMN:</b>	UBISENSOR30V1
<b>HVIN:</b>	UBISENSOR30V1
<b>Test Sample Serial Number:</b>	0011CE0163C9
<b>Hardware Version:</b>	Build revision D
<b>Software Version:</b>	D4 3.7sp3
<b>Firmware Version:</b>	D4 3.7sp3
<b>FCC ID:</b>	SEASENSOR33
<b>ISED Canada Certification Number:</b>	8673A-SENSOR33

#### **3.2 Modifications Incorporated in the EUT**

No modifications were applied to the EUT during testing.

#### **3.3 Additional Information Related to Testing**

<b>Technology Tested:</b>	IEEE 802.15.4 f	
<b>Type of Unit:</b>	Transceiver	
<b>Modulation Type:</b>	GFSK	
<b>Data Rate:</b>	250 kbps	
<b>Power Supply Requirement(s):</b>	Nominal	48 VDC
<b>Channel Spacing:</b>	750 KHz	
<b>Transmit Frequency Range:</b>	2401.75 MHz to 2481.75 MHz	
<b>Transmit Channels Tested:</b>	<b>Channel ID</b>	<b>Channel Frequency (MHz)</b>
	Bottom	2401.750
	Middle	2442.000
	Top	2481.750

#### **3.4 Description of Available Antenna**

The radio utilizes an integrated antenna, with the following peak gain:

<b>Frequency Range (MHz)</b>	<b>Antenna Gain (dBi)</b>
2400 to 2483.5	2.1

### **3.5 Description of Test Setup**

#### **Support Equipment**

The following support equipment was used to exercise the EUT during testing:

<b>Description:</b>	PoE Switch
<b>Brand Name:</b>	TP Link
<b>Model Name or Number:</b>	TL-SF1008P
<b>Serial Number:</b>	2152073004310

<b>Description:</b>	AC power Supply (PoE Switch)
<b>Brand Name:</b>	Leader Electronics Inc.
<b>Model Name or Number:</b>	NU-F480125-I1
<b>Serial Number:</b>	Not marked or stated

<b>Description:</b>	Laptop PC
<b>Brand Name:</b>	Lenovo
<b>Model Name or Number:</b>	T14
<b>Serial Number:</b>	00329101A316555AA736

<b>Description:</b>	USB Memory stick
<b>Brand Name:</b>	Not marked or stated
<b>Model Name or Number:</b>	Not marked or stated
<b>Serial Number:</b>	Not marked or stated

<b>Description:</b>	Companion device – Location tracking sensor #1
<b>Brand Name:</b>	Ubisense
<b>Model Name or Number:</b>	UBISENSOR30v1
<b>Serial Number:</b>	0011CE015ABC
<b>Hardware Version:</b>	RevC
<b>Software Version:</b>	D4 3.7sp3

<b>Description:</b>	Companion device – Location tracking sensor #2
<b>Brand Name:</b>	Ubisense
<b>Model Name or Number:</b>	UBISENSOR30v1
<b>Serial Number:</b>	0011CED404D6
<b>Hardware Version:</b>	RevC
<b>Software Version:</b>	D4 3.7sp3

**Support Equipment (continued)**

<b>Description:</b>	Companion device – Location tracking sensor #3
<b>Brand Name:</b>	Ubisense
<b>Model Name or Number:</b>	UBISENSOR30v1
<b>Serial Number:</b>	0011CE00BAA1
<b>Hardware Version:</b>	RevC
<b>Software Version:</b>	D4 3.7sp3

<b>Description:</b>	Companion device – Location tracking sensor #4
<b>Brand Name:</b>	Ubisense
<b>Model Name or Number:</b>	UBISENSOR30v1
<b>Serial Number:</b>	0011CEFF004B
<b>Hardware Version:</b>	RevC
<b>Software Version:</b>	D4 3.7sp3

<b>Description:</b>	Companion device – Location tracking sensor #5
<b>Brand Name:</b>	Ubisense
<b>Model Name or Number:</b>	UBISENSOR30v1
<b>Serial Number:</b>	0011CE0163C3
<b>Hardware Version:</b>	RevC
<b>Software Version:</b>	D4 3.7sp3

<b>Description:</b>	Etherent Cables. Quantity 3. Length 1.0 m Etherent Cables. Quantity 1 Length 2.0 m Etherent Cables. Quantity 6. Length 3.0 m Etherent Cables. Quantity 1. Length 5.0 m
<b>Brand Name:</b>	Not marked or stated
<b>Model Name or Number:</b>	Not marked or stated
<b>Serial Number:</b>	Not marked or stated

## **Operating Modes**

The EUT was tested in the following operating mode(s):

- Transmitting continuously with a modulated carrier and maximum power setting on bottom, middle and top channels as required.
- Transmitting non-continuously using the worst case operational duty cycle with a modulated carrier and maximum power setting on bottom channel, for duty cycle measurements only.

## **Configuration and Peripherals**

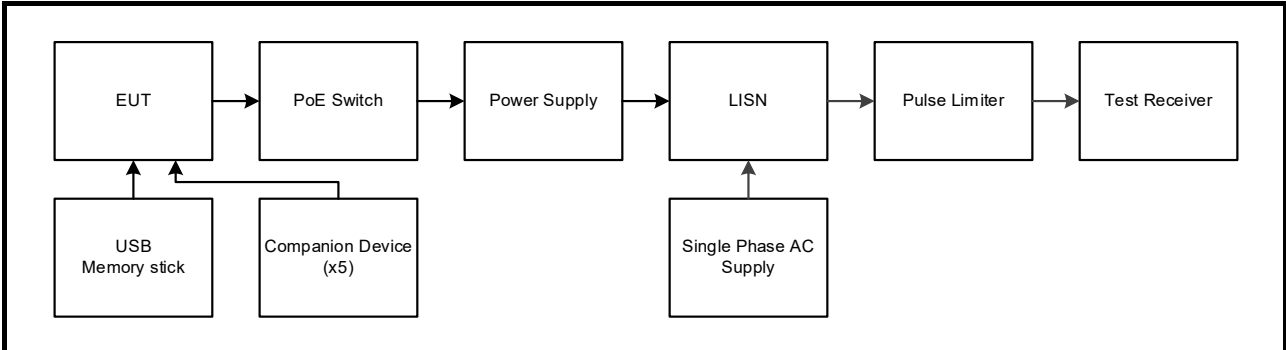

The EUT was tested in the following configuration(s):

- Controlled in test mode using a software application on the laptop PC. The laptop was connected to the EUT via a PoE switch. The application was used to enable continuous transmission and to select the test channels, data rate and packet length as required. The customer supplied test instructions "Test Instruction for UBISENSOR30V1.pdf".
- For radiated measurements, the EUT was positioned in its normal mode of operation and powered from the PoE switch. A USB memory stick and five companion Ubisense UBISENSOR30v1 devices were connected to the EUT to terminated all active ports. The companion Ubisense UBISENSOR30v1 devices were placed under the turntable.
- The EUT was powered by a 48 VDC PoE supply, which in turn was powered by a 120 VAC 60 Hz single phase mains supply.
- The EUT has two antennas used for diversity. All measurements were performed on both antennas individually.
- For AC conducted emissions measurements, the EUT was powered from the PoE switch. A USB memory stick and five companion Ubisense UBISENSOR30v1 devices were connected to the EUT to terminated all active ports. The laptop PC was disconnected once the EUT was configured.

## **4 Radiated Test Results**

### **4.1. Transmitter Fundamental Field Strength**

#### **Test Summary:**

<b>Test Engineer:</b>	Andrew Edwards	<b>Test Date:</b>	11 January 2023
<b>Test Sample Serial Number:</b>	0011CE0163C9		

<b>FCC Reference:</b>	Part 15.249(a)(e)
<b>ISED Canada Reference:</b>	RSS-Gen 6.12 / RSS-210 B.10(a)
<b>Test Method Used:</b>	ANSI C63.10 Section 6.6

#### **Environmental Conditions:**

<b>Temperature (°C):</b>	22
<b>Relative Humidity (%):</b>	42

#### **Note(s):**

1. The final measured value in the tables below incorporates the calibrated antenna factor and cable loss.
2. Measurements were performed in a fully-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 1.5m above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
3. Pre-scans were performed and markers placed on the highest measured levels. The test receiver resolution bandwidth was set to 1 MHz and video bandwidth to 3 MHz. Peak and average detectors were used, sweep time was set to auto and trace mode was Max Hold.
4. Peak Final measurements were performed on the marker frequencies and results entered into the table below. The test receiver resolution bandwidth was set to 1 MHz and video bandwidth 3 MHz. Peak detector was used, sweep time was set to auto and trace mode was Max Hold.
5. \*A duty cycle correction factor was applied to measured peak levels to obtain the average result:

$$\text{Duty cycle correction} = 20 \text{ Log} (1/(28.04 \mu\text{s} / 93.71 \text{ ms})) = 10.5 \text{ dB}$$

**Transmitter Fundamental Field Strength (continued)****Results: Antenna A****Results: Bottom Channel / Peak**

## 4.2. Transmitter Duty Cycle

### Test Summary:

<b>Test Engineer:</b>	Andrew Edwards	<b>Test Date:</b>	13 January 2023
<b>Test Sample Serial Number:</b>	0011CE0163C9		

<b>FCC Reference:</b>	Part 15.35(c)
<b>Industry Canada Reference:</b>	RSS-Gen 6.10
<b>Test Method Used:</b>	ANSI C63.10 Section 7.5

### Environmental Conditions:

<b>Temperature (°C):</b>	21
<b>Relative Humidity (%):</b>	41

### Note(s):

1. In order to assist with the determination of the average level of fundamental and spurious emissions field strength, measurements were made of duty cycle to determine the transmission duration and the silent period time of the transmitter. The transmitter duty cycle was measured using a spectrum analyser in the time domain and calculated by  $20 \log(1/(\text{On Time} / [\text{Period or } 100 \text{ ms whichever is the lesser}]))$

$$\text{Duty cycle} = 20 \text{ Log } (1/(28.04 \mu\text{s} / 93.71 \text{ ms}))$$

$$\text{Duty cycle} = 20 \text{ Log } (1/0.299)$$

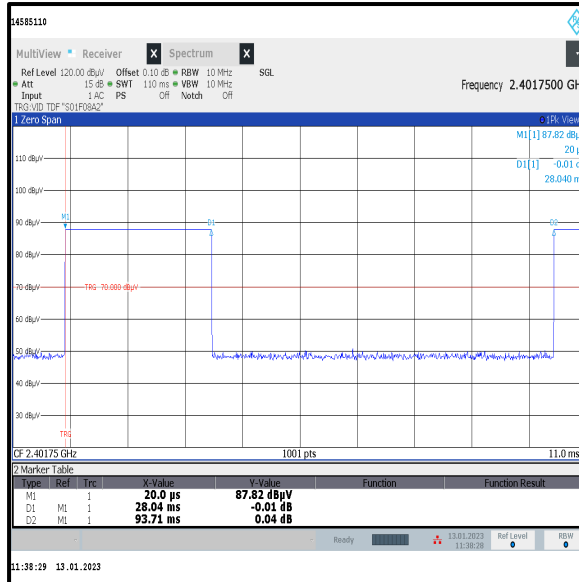

$$\text{Duty cycle} = 10.5 \text{ dB}$$

2. The measurement was performed in a fully anechoic chamber (Asset Number K0001) at a distance of 3 metres.
3. The test receiver resolution bandwidth was set to 10 MHz and video bandwidth to 10 MHz. A peak detector was used, sweep time was set to 110 ms with a trigger offset of -10 ms. The span was set to zero. Markers were placed on the rising edge of the first burst, a delta marker 1 was placed on the falling edge of the first burst and a second marker was placed on the rising edge of the next burst. The results are recorded in the tables below.

**Transmitter Duty Cycle (continued)**

**Results:**

Pulse Duration (ms)	Period (ms)	Duty Cycle (dB)
28.04	93.71	10.5

### **4.3. Transmitter 20 dB Bandwidth**

#### **Test Summary:**

<b>Test Engineer:</b>	Andrew Edwards	<b>Test Date:</b>	11 January 2023
<b>Test Sample Serial Number:</b>	0011CE0163C9		

<b>FCC Reference:</b>	Part 2.1049
<b>Test Method Used:</b>	ANSI C63.10 Section 6.9.2

#### **Environmental Conditions:**

<b>Temperature (°C):</b>	22
<b>Relative Humidity (%):</b>	42

#### **Note(s):**

1. Transmitter 20 dB bandwidth was measured using the marker delta function of a test receiver. The resolution bandwidth was set between 1% and 5% of the occupied bandwidth and the video bandwidth set to 3 times the resolution bandwidth.
2. The test receiver resolution bandwidth was set to 10 kHz and video bandwidth to 30 kHz. A peak detector was used, sweep time was set to auto and the trace mode was Max Hold. The span was set to 3.5 MHz. Markers were placed 20 dB above and below the peak of the carrier. The marker delta function was used to calculate the 20 dB bandwidth. The results are recorded in the tables below.

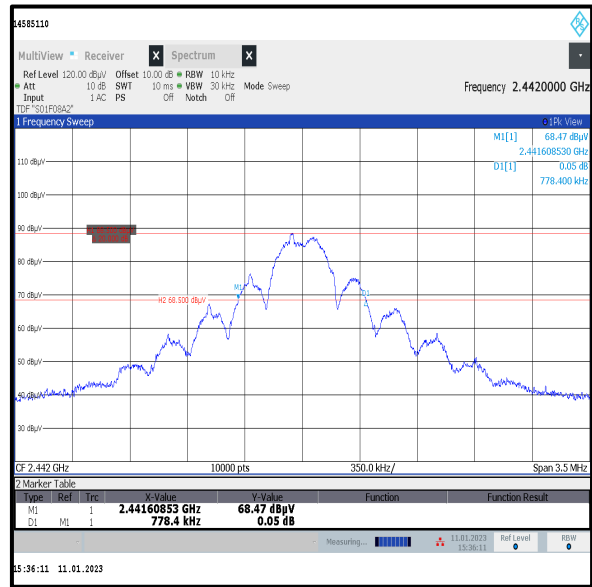

**Transmitter 20 dB Bandwidth (continued)**

**Results: Antenna A**

Channel	20dB Bandwidth (kHz)
Bottom	771.050
Middle	778.400
Top	778.750

#### **4.4. Transmitter 99% Emission Bandwidth**

##### **Test Summary:**

<b>Test Engineer:</b>	Andrew Edwards	<b>Test Date:</b>	11 January 2023
<b>Test Sample Serial Number:</b>	0011CE0163C9		

<b>ISED Canada Reference:</b>	RSS-Gen 6.7
<b>Test Method Used:</b>	RSS-Gen 6.7

##### **Environmental Conditions:**

<b>Temperature (°C):</b>	22
<b>Relative Humidity (%):</b>	42

##### **Note(s):**

1. Occupied bandwidth (99% bandwidth) was measured using a test receiver occupied bandwidth function. The resolution bandwidth was set between 1 % and 5% of the occupied bandwidth and the video bandwidth set to 3 times the resolution bandwidth.
2. The test receiver resolution bandwidth was set to 10 kHz and video bandwidth 30 kHz. A peak detector was used, sweep time was set to auto and the trace mode was Max Hold. The span was set to 3.5 MHz. The test receiver function set the measurements to be made at 99% of the emission bandwidth. The results are given in the tables below.

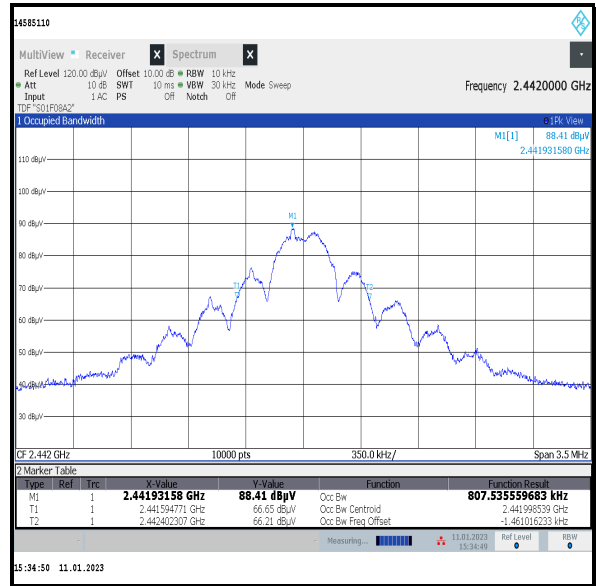

**Transmitter 99% Emission Bandwidth (continued)**

## **4.5 Transmitter Radiated Emissions <1 GHz**

### **Test Summary:**

<b>Test Engineer:</b>	Andrew Edwards	<b>Test Dates:</b>	11 January 2023 & 12 January 2023
<b>Test Sample Serial Number:</b>	0011CE0163C9		

<b>FCC Reference:</b>	Parts 15.249(d) & 15.209(a)
<b>ISED Canada Reference:</b>	RSS-Gen 6.13, 8.9 & 8.10 / RSS-210 B.10(b)
<b>Test Method Used:</b>	ANSI C63.10 Sections 6.3, 6.4 and 6.5
<b>Frequency Range</b>	9 kHz to 1000 MHz

### **Environmental Conditions:**

<b>Temperature (°C):</b>	22
<b>Relative Humidity (%):</b>	41 to 42

### **Note(s):**

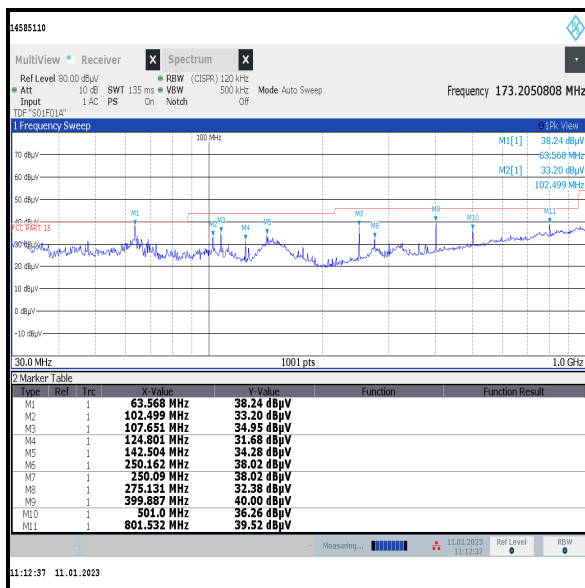

1. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
2. All other emissions shown on the pre-scans were investigated and found to be ambient, > 20 dB below the appropriate limit or below the noise floor of the measurement system.
3. Measurements below 30 MHz were performed in a semi-anechoic chamber (Asset Number K0001) at 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. The limit was extrapolated to 3 metres in accordance with ANSI C63.10 clause 6.4.3 using the method described in clause 6.4.4.2. ANSI C63.10 clause 5.2 states an alternative test site that can demonstrate equivalence to an open area test site may be used for measurements below 30 MHz. Therefore, measurements were performed in a semi-anechoic chamber. The correlation data between semi-anechoic chamber and an open field test site is available upon request.
4. The limits in CFR 47, Part 15, Subpart C, paragraph 15.209 (a), are identical to those in RSS-GEN Section 8.9, Table 6, since the measurements are performed in terms of magnetic field strength and converted to electric field strength levels (as reported in the table) using the free space impedance of  $377\Omega$ . For example, the measurement frequency X kHz resulted in a level of Y dB $\mu$ V/m, which is equivalent to  $Y - 51.5 = Z$  dB $\mu$ A/m, which has the same margin, W dB, to the corresponding RSS-GEN Table 6 limit as it has to the 15.209(a) limit.
5. Measurements between 30 MHz and 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
6. Pre-scans were performed and markers placed on the highest measured levels. The test receiver was configured as follows: For 9 kHz to 150 kHz, the resolution bandwidth was set to 300 Hz and video bandwidth 1 kHz. A peak detector was used and trace mode was Max Hold. For 150 kHz to 30 MHz, the resolution bandwidth was set to 10 kHz and video bandwidth 30 kHz, trace mode was Max Hold. For 30 MHz to 1 GHz, the resolution bandwidth was set to 120 kHz and video bandwidth 500 kHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold.
7. Final measurements between 30 MHz to 1 GHz were performed on the marker frequencies and results entered into the tables below. The test receiver resolution bandwidth was set to 120 kHz, using a CISPR quasi-peak detector.
8. In accordance with ANSI C63.10 section 6.5.4 only the highest six emissions were record the tables below.

**Transmitter Radiated Emissions (continued)**

## **4.6 Transmitter Radiated Emissions >1 GHz**

### **Test Summary:**

<b>Test Engineer:</b>	Andrew Edwards	<b>Test Dates:</b>	12 January 2023 & 13 January 2023
<b>Test Sample Serial Number:</b>	0011CE0163C9		

<b>FCC Reference:</b>	Parts 15.249(d)(e) & 15.209(a)
<b>ISED Canada Reference:</b>	RSS-Gen 6.13, 8.9 & 8.10 / RSS-210 B.10(b)
<b>Test Method Used:</b>	ANSI C63.10 Sections 6.3 and 6.6
<b>Frequency Range</b>	1 GHz to 25 GHz

### **Environmental Conditions:**

<b>Temperature (°C):</b>	22
<b>Relative Humidity (%):</b>	41 to 43

### **Note(s):**

1. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
2. The emission at approximately 2442 MHz is the EUT fundamental.
3. All other emissions shown on the pre-scan plot were investigated and found to be ambient, >20 dB below the appropriate limit or below the measurement system noise floor.
4. In accordance with FCC 15.249(d) / RSS-210 B.10(b) all emissions radiating outside of 2400-2483.5 MHz shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in 15.209 / RSS-Gen 8.9, whichever is the lesser attenuation. In this case 15.209 / RSS-Gen 8.9 limits apply.
5. \*In accordance with ANSI C63.10 Section 6.6.4.3, Note 1, if the peak measured value complies with the average limit, it is unnecessary to perform an average measurement.
6. Pre-scans and final measurements above 1 GHz were performed in a fully anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the test chamber floor in the centre of the chamber turntable. During prescans, all measurement antennas were placed at a fixed height of 1.5 metres above the test chamber floor, in line with the EUT. Final measurements above 1 GHz were performed with the EUT placed at a height of 1.5 metres above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
7. Pre-scans were performed and markers placed on the highest measured levels. The test receiver resolution bandwidth was set to 1 MHz and video bandwidth to 3 MHz. The sweep time was set to auto. Peak and average measurements were performed with their respective detectors.
8. \*\*A duty cycle correction factor was applied to peak measured level to obtain the average result

$$\text{Duty cycle correction} = 20 \text{ Log } (1/(28.04 \mu\text{s} / 93.71 \text{ ms})) = 10.5 \text{ dB}$$

### Transmitter Radiated Emissions (continued)

#### Results: Antenna B

Note: These plots are prescans and for indication purposes only. For final measurements, see accompanying tables.

## 4.7 Transmitter Band Edge Radiated Emissions

### Test Summary:

<b>Test Engineer:</b>	Andrew Edwards	<b>Test Date:</b>	12 January 2023
<b>Test Sample Serial Number:</b>	0011CE0163C9		

<b>FCC Reference:</b>	Parts 15.249(d)(e) & 15.209(a)
<b>ISED Canada Reference:</b>	RSS-Gen 6.13, 8.9 & 8.10 / RSS-210 B.10(b)
<b>Test Method Used:</b>	ANSI C63.10 Sections 6.10.4, 6.10.5 and 6.10.6

### Environmental Conditions:

<b>Temperature (°C):</b>	22
<b>Relative Humidity (%):</b>	43

### Note(s):

- The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
- In accordance with FCC part 15.249(d) / RSS-210 B.10 (b), all emissions outside of the specified frequency band shall be attenuated by at least 50 dBc or the general radiated emission limits in 15.209 / RSS-Gen 8.10 whichever has less attenuation.
- The lower band edge falls in a non-restricted band, therefore 15.249(d) limits have been applied. 15.249(d) states all emissions radiating outside of 2400-2483.5 MHz shall be shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in 15.209, whichever is the lesser attenuation.
- \* The lower and upper average band edge measurements performed using the test method detailed in ANSI C63.10 Section 6.10.5 exceed the limits. The measurements were repeating using the marker-delta method in accordance with ANSI C63.10 Section 6.10.6. An in-band field strength measurement was initially performed. A second measurement was performed using a reduced RBW of 120 kHz which is 1% of the 12 MHz span. The amplitude delta between the peak of the fundamental emission and the emission level at each band edge was recorded. The delta was subtracted from the initial in-band field strength level to obtain the corrected peak band edge levels. The average band edge levels were then obtained by subtracting the duty cycle correction factor from the corrected peak band edge levels.
- \*\* During the marker-delta methods a second marker (M2) was placed on the highest emission level in the adjacent band (up to 2 MHz from the band edge frequency). It was not possible to apply multiple normal and delta markers at the same time. Therefore the adjacent value were calculated as shown below:

Adjacent Delta value: (Delta marker (D1) – (Adjacent marker (M2) - Band Edge marker (M1))

*Antenna A / Lower Band Edge at 2399.914 MHz = (43.4 - (57.6 - 56.6)) = 42.4 dB*

*Antenna A / Upper Band Edge at 2484.186 MHz = (43.7 - (58.6 - 58.1)) = 42.2 dB*

*Antenna B / Lower Band Edge at 2399.989 MHz = (44.0 - (56.3 - 55.2)) = 42.9 dB*

*Antenna B / Upper Band Edge at 2484.349 MHz = (43.2 - (57.1 - 46.4)) = 42.5 dB*

## **5 AC Power Line Conducted Emissions Test Results**

### **5.1 Transmitter AC Conducted Spurious Emissions**

#### **Test Summary:**

<b>Test Engineers:</b>	Alison Johnston	<b>Test Date:</b>	11 January 2023
<b>Test Sample Serial Number:</b>	0011CE0163C9		

<b>FCC Reference:</b>	Part 15.207
<b>ISED Canada Reference:</b>	RSS-Gen 8.8
<b>Test Method Used:</b>	ANSI C63.10 Section 6.2 / FCC KDB 174176 and notes below

#### **Environmental Conditions:**

<b>Temperature (°C):</b>	22
<b>Relative Humidity (%):</b>	44

#### **Note(s):**

1. The EUT was connected to a 120 VAC 60 Hz single phase supply via a LISN.
2. In accordance with FCC KDB 174176 Q4, tests were performed with a 240 VAC 60 Hz single phase supply as this was within the voltage range marked on the EUT power supply (120 to 277 VAC).
3. A pulse limiter was fitted between the LISN and the test receiver.
4. Pre-scans were performed, and markers placed on the highest live and neutral measured levels. Final measurements were performed on the marker frequencies and the results recorded in the tables below.
5. Measurements were performed on antenna A as this was deemed to be worst case.

**Transmitter AC Conducted Spurious Emissions (continued)****Results: Live / Quasi Peak / 120 VAC 60 Hz**

Frequency (MHz)	Line	Level (dB $\mu$ V)	Limit (dB $\mu$ V)	Margin (dB)	Result
0.168	Live	44.9	65.1	20.2	Complied
0.375	Live	42.9	58.4	15.5	Complied
0.465	Live	35.8	56.6	20.8	Complied
0.965	Live	33.4	56.0	22.6	Complied
1.464	Live	33.8	56.0	22.2	Complied
2.067	Live	35.9	56.0	20.1	Complied

**Results: Live / Average / 240 VAC 60 Hz**

Frequency (MHz)	Line	Level (dB $\mu$ V)	Limit (dB $\mu$ V)	Margin (dB)	Result
0.168	Live	34.3	55.1	20.8	Complied
0.380	Live	39.5	48.3	8.8	Complied
0.461	Live	33.0	46.7	13.7	Complied
0.879	Live	31.1	46.0	14.9	Complied
1.473	Live	28.8	46.0	17.2	Complied
2.018	Live	29.9	46.0	16.1	Complied

**Results: Neutral / Quasi Peak / 240 VAC 60 Hz**

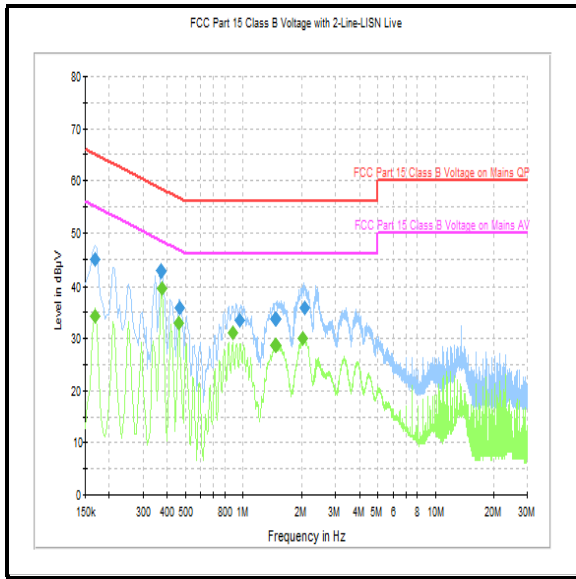

Frequency (MHz)	Line	Level (dB $\mu$ V)	Limit (dB $\mu$ V)	Margin (dB)	Result
0.168	Neutral	46.8	65.1	18.3	Complied
0.209	Neutral	42.6	63.3	20.7	Complied
0.375	Neutral	43.9	58.4	14.5	Complied
1.469	Neutral	33.8	56.0	22.2	Complied
2.396	Neutral	35.5	56.0	20.5	Complied
3.228	Neutral	32.4	56.0	23.6	Complied

**Results: Neutral / Average / 240 VAC 60 Hz**

Frequency (MHz)	Line	Level (dB $\mu$ V)	Limit (dB $\mu$ V)	Margin (dB)	Result
0.168	Neutral	37.2	55.1	17.9	Complied
0.249	Neutral	37.2	51.8	14.6	Complied
0.375	Neutral	40.4	48.4	8.0	Complied
0.461	Neutral	33.4	46.7	13.3	Complied
1.478	Neutral	28.7	46.0	17.3	Complied
2.027	Neutral	29.1	46.0	16.9	Complied

**Transmitter AC Conducted Spurious Emissions (continued)**

**Results: 240 VAC 60 Hz**

**Live**

**Neutral**

*Note: These plots are pre-scans and for indication purposes only. For final measurements, see accompanying tables.*
