The VMW03 communicates with the MedicGate (VMG02) and with the MiniGate (VMG03) via RF protocol.

Tested model has carrier frequency 915 MHz.

The EUT is Transceiver based on chipset Chipcon CC1020.

The transceiver uses one channel.

Integral antenna – wire, about 8 cm length.

Output transmission power: -1 dBm (EIRP)

Bandwidth: 50 kHz

Modulation type: FSK.

The EUT's dimensions: 26 cm x 4.5 cm x 2 cm, approx.

The EUT's powered from three 1.5V type 389 silver-oxide batteries.

The EUT's current consumption is up to 40 mA.

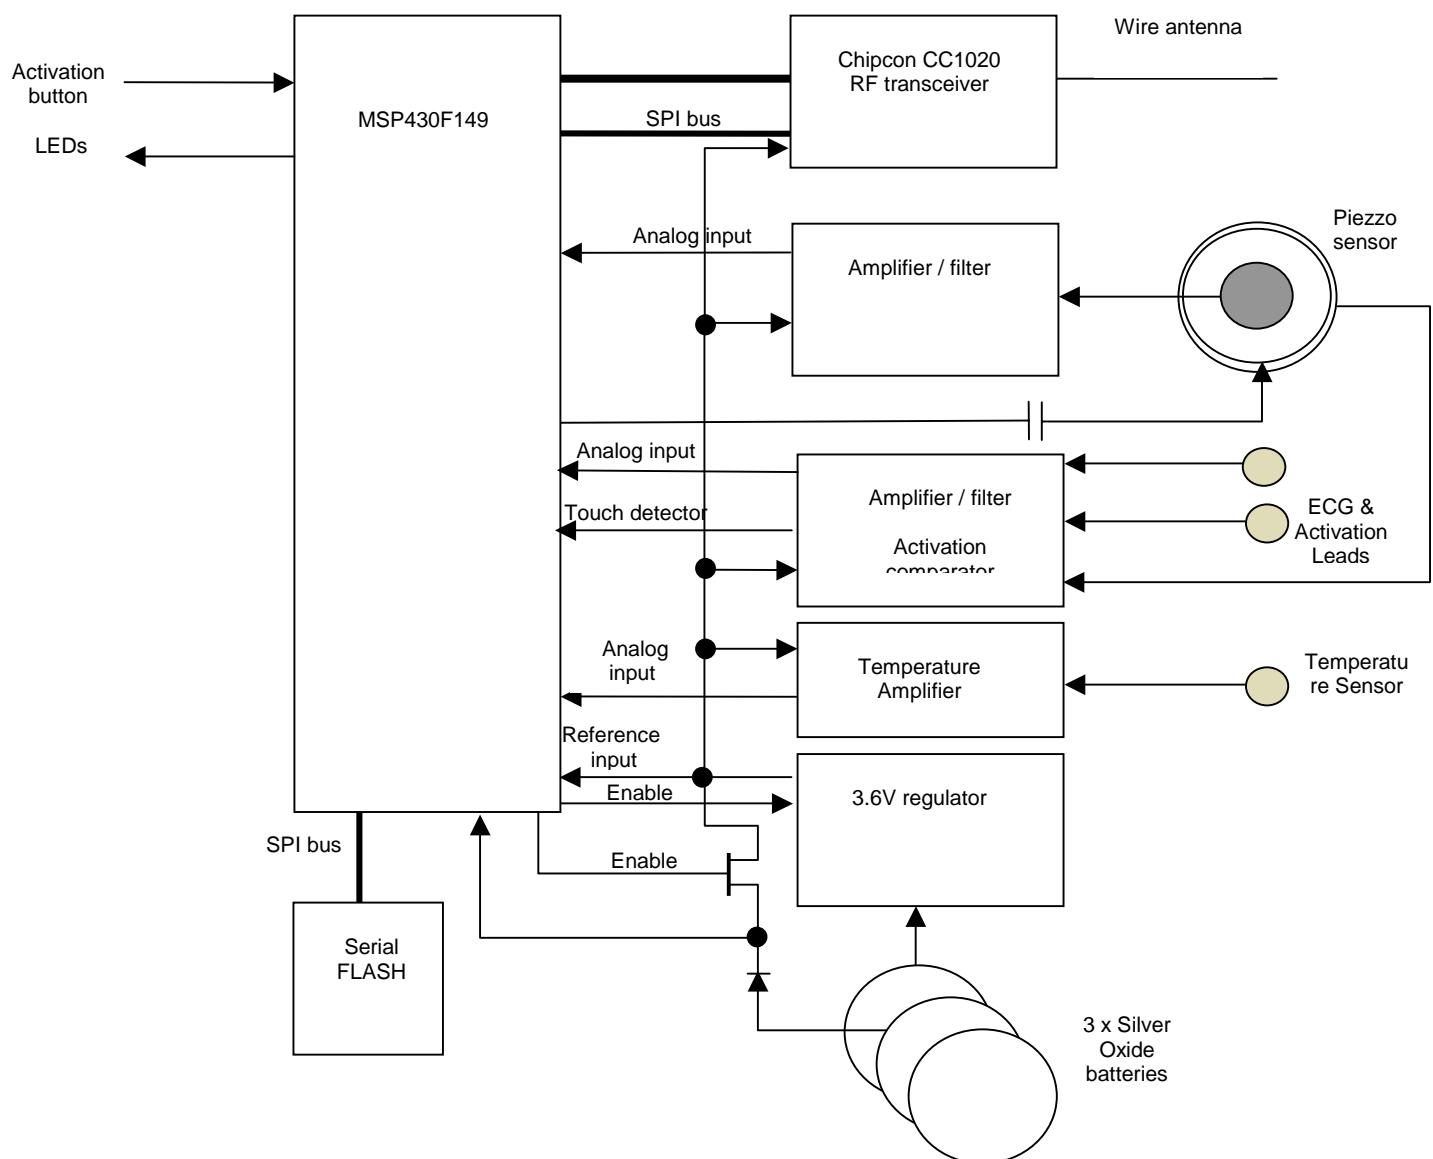

The EUT's block diagram and Tx-Rx block diagram are shown in Figures 1 and 2, respectively. VMW03 external and internal views are presented in Photos 1-2.

## 2. Measurements, examinations and derived results

### 2.1. *Location of the Test Site:*

Preliminary radiated test and immunity tests were conducted at the EMC laboratory of the Standards Institution of Israel in Tel-Aviv.

All other tests were conducted in an Open Area Test Site located at Kibbutz Native Halamed Hai in Emek HaEla, Israel.

### 2.2. *Test condition:*

Temperature: 22 °C. Humidity: 56 %. Atmospheric pressure: 1010 mbar.

### 2.3. *Initial visual check and functional test:*

Initial visual check and brief built- in- test of the EUT was performed before testing.

- No external damages were found.
- The test on the EUT passed successfully.

**Test Report No.:** 8412305151

**Page 10 of 24 Pages**

**Title:** Test on MiniClinic

**Model:** VMW03 (915 MHz)

#### **2.4. Radiated emission test:**

##### **2.4.1. General:**

Per FCC Part 15 Subpart B Section 15.109 / Subpart C Section 15.209.

- \* Initial scans were made using a peak detector but still using the appropriate CISPR 16 (Quasi-Peak) detector IF bandwidth.
- \* A tolerance limit was set 10 dB below the specification limit. Levels above the tolerance limit were retested using the Quasi-Peak detector.
- \* If the result with a Quasi-Peak detector exceeds the specification limit, it is marked with "Fails" in the margin, if it is within the measurement uncertainty, it is marked with a \*\*.

##### **2.4.2. Preliminary radiated emission tests:**

Preliminary radiated measurements were performed in a semi-anechoic chamber at a distance of 3 meters. The EUT was setup in its typical configuration and operated in Rx mode.

The frequency spectrum was monitored. EUT configuration, cable configuration and mode of operation, which produced the maximum level of emission, were documented. A list of frequencies to be tested was prepared.

Scan of preliminary radiated emission test is presented on Plot # 1.

##### **2.4.3. Final measurements:**

The final radiated measurements were performed at the Open Area Test Site.

The EUT was operated as described in clause 1.3.

The EUT was installed on a turn- table.

All measurements at the Open Area Test Site were performed at a 10 m measurement distance.

The Biconilog 30 MHz-2 GHz antenna was used.

The EUT's configuration and mode of operation, which produced the maximum level of emissions, were selected.

The Frequency range from 30 to 1000 MHz was investigated.

The measurements were performed at each frequency found previously and at frequencies at which the signal was 10 dB below the limit or less.

All measurements at the Open Area Test Site were performed at a 10 m measurement distance from the EUT.

The levels were maximized by initially rotating turntable through 360°, varying the antenna height between 1 m and 4 m, rerouting EUT cables and changing antenna-to-EUT polarization from vertical to horizontal.
