To delete one or all numbers on the speed list

1. select “Contact” in the main menu
2. select “speed List”
3. choose “Erase” or “Erase All” in “Option”

Using the vCard - VCard exchange

The vCard allow you to exchange phonebook entries via SMS with others whose handsets support Smart Messaging.

Set Reception Mode

The handset support two vCards reception mode, ‘**On phonebook**’ or ‘**Prompt**’.

‘On phonebook’ means when you receive a new vCard, the handset will save the contact information directly on your phonebook, and if the entry with the same contact name exists already in your phonebook, it will be overwritten without prompt. After the contact information has been saved to phonebook, the vCard received will be deleted.

‘Prompt’ means the handset will prompt for a new vCard’s incoming. The handset will popup a dialog to ask you whether read the message right now, and your phone sounds, and  is shown on the display. If you have both unread SMSs and vCards,  is shown on the display instead.

Your phone holds up to 120 vCards.

Read vCards

If your phone is turned on when it receives a vCard, your phone sounds an alert or vibrates and  is shown on the display (if you have unread SMSs,  is shown on the display instead.). You have a choice of reading the message immediately by pressing “View” key or reading it later by press “Back” key. When you press “View” key, the display will show the content of the vCard message if there is only one unread vCard message. Otherwise, the display will show the vCard message list.

To read a vCard

4. Enter ‘Message’ and select “8: Multimedia Box”.

5. Select “2 vCard”

If a vCard message is unread, there is a  flag before the item in the message list. Otherwise, the flag is .

6. You can select a vCard by scrolling “↑ ↓” keys and press “Option” to choose “View”. The vCards shown are sorted by the time they received.

7. You can read the vCard’s content by scrolling “↑ ↓” keys.

8. If you want to save this vCard's contact information, press "Save". If a contact entry with the same name exists, your phone will prompt to ask you whether to overwrite the existed entry.

Send a vCard

You can send a vCard through your phone.

To send a vCard;

1. Press "Contact" key at the idle state, and select the contact entry you want to send by scrolling "↑ ↓" keys.
2. Press "Option" key, and select "Send as vCard", then press "Select".

3. All contact details lists on the display, and each with a check box. You can select a detail to send by scrolling "↑ ↓" keys, and then press "Option" key to add/delete it into/from to-be-send data, or add all details into to-be-send data by selecting "Un/Select", "Select all" menus.

4. When you finish selecting the details to send out, press "Option" key and select "Ok" menu, then press "Select" key, you can input addresses which will receive the vCard. You also can press 'Option' key and select the 'Search' menu to select a contact entry to send this vCard to. The

selected contact's mobile phone number will be displayed.

5. If the contact entry is set to 'private', you must enter the correct lock code before you send the vCard.

6. Send out the vCard via SMS by pressing "Option" key, and selecting the 'Ok' menu, and you phone will send the vCard to the address you have inputted.
7. If the vCard has been sent to an address successfully, your phone will display 'Message Sent!'.

Send all of your phonebook

You can send out all of your phonebook via vCards. To make a batch-send;

1. Press "Menu" key at the idle state, and enter contact menu.
2. Select "Send all as vCards" menu.
3. Input the address you want to send the phonebook to, and then press "send" key. You can only input one address to make the batch-send.
4. Your phone will prompt to ask you whether you are sure to make the batch-send.
5. Press "Ok" key to confirm.

6. The send status will be displayed. Reference:

“Sending” means the current status is sending.

“2/3” means the phone is sending the second contact entry in phonebook.

“Success!” means the previous contact entry in phonebook is sent out successfully. If there are errors in sent, your phone displays

and your phone try to resend the vCard up to 10 times. If the vCard can't be sent successfully in the end, this batch-send will be paused. You can continue this batch-send by press “Continue” key. You can manually pause a batch-send by press “Pause” key too.

You also can break a batch-send by pressing the “Break” key.

Delete vCards

You can delete vCards one by one or delete all vCards at once.

To delete a vCard;

1. When you read vCards, Select the vCard you want to delete by scrolling “↑ ↓” keys. If you want delete all of the vCards, select any one vCard.
2. Press “Option” key, and select “Erase” if you want to delete this vCard, or select “Erase all” if you want to delete all of the vCards, then press “Select”.
3. Your phone will prompt to ask you whether sure to delete the vCard or delete all the vCards.

4. Press "Ok" key, the vCard(s) will be deleted.

1. Select “Call Setup” menu item

2. Select “Voice Privacy” menu item

3. Select an option , and then select “OK” to save.

To set up CSP

CSP: long distance code to be inserted in long distance calls. If you enable a carrier selection code, this code will be inserted to the long distance calling number which originate from the phone.

1. Select “Settings” in main menu

2. Select “call setup”
3. Select “CSP”
4. Select “Preferred Code” to add carrier codes you prefer. there can be 5 codes in the list at most. The max length of each code is 2.

5. Select “Enable/Disable” to set up CSP.

6. Select “New Carrier” to enable a carrier code which is not in the preferred list.

7. Select "Preferred Code" to enable a carrier code which exists in the preferred list.

8. Select "Disable" to disable carrier code.

9. Select "Status Checking" to check the current status of CSP.

Viewing Phone Information

To view your phone number

1. Select "Phone Info" menu item.

4. Select "Phone Number".

5. Editing the number, then save, or cancel if you just want to view the number.

To view the version of software installed on your phone

1. Select “Settings” in main menu
6. Select “Phone info”
7. Select “S/W version”

Enable Key guard

Enable user to lock the keypad during phone’s idle status.

1. Select “Keyguard” menu item.

8. Select “Off” to disable key guard. Or select “Customize” to enable key guard.

Network Service

Enable user to set call diverting and call forwarding.

Turning call diverting on/off

1. Select “Network Service” menu item.

9. Select “Call diverting” menu item.

3. Select an option and then select "ok" to enable the function.

Turning call forwarding on/off

1. Select "Network Service" menu item.

10. Select "Call forwarding" menu item.

3. Select an option and then select "ok" to enable/disable the function.

vCard Receiving Prompt

Giving prompt when receiving a vCard.

1. Select "vCard" menu item.

2. "On Phonebook" means not giving the prompt when receiving a vCard, and save it to phonebook directly.

Chapter 6 Using the Phone Tools

Phone tools menu includes schedule, alarm clock, calculator,tip calculator.

Using the Schedule

You can use schedule to associate an alert with an event.

To add a schedule

1. select “Tools” from main menu
2. select “Schedule”
3. select “add new”

4. edit the date, then press “OK” to save.

5. add the description, then press “Ok”

6. set the time, then press Ok

To delete the schedule

1. select “Tools” in main menu
2. select “Schedule”
3. select “List All”
4. select the item you want to delete
5. select “Erase” in options

Using the Alarm Clock

To set the alarm time

1. select “Tools” in main menu
2. select “Alarm Clock”

3. select “set” in Option

4. set alarm time, then press Done

To turn off the alarm

1. select “Tools” in main menu
2. select “Alarm Clock”
3. select “Disable” in Option

Using the Calculator

Calculate

1. select “Tools” in main menu
2. select “Calculator”.

3. Enter the number.

4. Select option to select an operator.

5. Enter another number.

6. select “=” operator to get the result.

Using the Tip Calculator

To calculate a tip

5. select “Tools” in main menu
6. select “Tip Calculator”, and enter bill amount.

7. select the rate

8. press left soft key ,and get the result.

5. select "Option" soft key.

6. select "Split" option to split the payment.

Chapter 7 Keypad Service Provisioning

This is a hidden menu, and you can enter it by pressing ‘#*0204’.

This is protected by SPC1. The default is “111111”.

Program NAM1, NAM2, or SPCs

Select the menu “Service program” and press ‘Select’ key.

After you input the SPC2, you can program NAM1 or NAM2. The default is “222222”.

To program NAM 1

select NAM 1

There will be many parameters to be input one by one. The next will bring up when you press “Ok”, and the value you input will be stored. You can back to the previous parameters by pressing “Back” key.

The MIN Lock is set to “Enable” as default. When you input a new MIN, it must meet the criterias stored in the MIN Lock table. Otherwise the phone will prompt “Invalid MIN!”.

If you want to change the MIN Lock setting, you must input SPC3 firstly.

The SPC3 is “333333” as default.

To program NAM 2

select “NAM 2” and it is almost the same as programming NAM 1.

To change SPCs

Select SPC

You can change SPC1 or SPC2 and set the max tries of SPC1 or SPC2.

The phone will reboot when you exit the 'Service program' menu.

Abbrev.NAM

You can program with the active NAM. The following parameters can be changed: MIN, MDN, Home SID, Primary CH A and Secondary CH A.

The phone will reboot if you changed any parameters.

System NAM Setting

To select preferred

Select the preferred for the active NAM.

To set the active NAM

You can set witch NAM to be activated. If the current active NAM is locked, you must unlock it before you set the other NAM to be active.

To lock/unlock the active NAM

The phone will reboot when quit the 'System' menu if you have changed the preferred or the active NAM.

Test Screen

This menu will display some system parameters such as Rx Power, Tx Power, Pilot Pn, EC/IO, etc. While the test screen is active, you can dial a number and end a call through the keypad. When in a call, the test screen will be taken to the front to show the parameters.

Factory test mode

This is also a hidden menu, and you can enter it by pressing “#*0203”.

Note: You can quit 'Keypad' test by press right soft key twice.

Chapter 8 Health and Safety Information

Exposure to Radio Frequency (RF) Signals

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission (FCC) for the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on the safety standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies.

The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

The exposure standard for wireless phones employs a unit of measurement known as Specific Absorption Rate (SAR). The SAR limit set by the FCC is 1.6 W/kg.¹

SAR tests are conducted using standard operating positions specified by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output of the phone.

Before a new model phone is available for sale to the public, it must be tested and certified by the FCC to insure that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on body) as required by the FCC for each model. While there may be differences between SAR levels of various phones and at various positions, they all meet the government requirement.

The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found on the FCC website (<http://www.fcc.gov/oet/fccid>) after searching the FCC ID printed in the label on the phone.

The highest SAR value for this model phone when tested for use at the ear is 1.58 W/kg, and when worn on the body, as described in this user guide, is 1.00 W/kg.

¹ In the U.S. and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

For Body Operation

To maintain compliance with FCC RF exposure requirements, use only belt-clips, holsters or similar accessories that maintain a 2.0 cm separation distance between the user's body and the back of the phone, including the antenna, whether extended or retracted. The use of belt-clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

For more information concerning exposure to radio frequency signals, see the following websites:
