

APPENDIX H – TUNE UP PROCEDURE

Test Configuration of Equipment under Test

The EUT has been tested under continuous transmitting mode.

All tests are performed at Low channel , Middle channel, High channel.

The field strength of spurious radiation emission for CDMA was measured at EUT stand-up position (H mode) and lie down position (E1 , E2 mode).

During all testings, EUT is in link mode with Base Station emulator (8960 Series 10) at maximum power level.

Frequency range has been investigated : Radiated emission has been measured from 30MHz to 12.75GHz.
