

HDMI CEC Control

After connecting the camera with TV-System, you may view pictures taken with the camera on the TV screen and operate the camera with your TV remote control to view and edit all images.

-  It is required that the TV-System supports HDMI CEC.
-  After the camera is successfully connected with TV-System, other buttons of the camera except the Power button cannot work, with the LCD staying dark.
-  Please refer to TV manual for relative settings of TV-System.

When shooting with stacked filters attached, the corners of the photo may turn dark (vignetting effect) because the filter holder blocks light from reaching the camera image sensor; especially, at wide angle zoom control settings. Please take test shots and review the results when using stacked filters. (Filter size : Φ 52mm)

Please enter the new password on smart device after changing wireless network password. Some models of smart device will remember the wireless network password previously entered, so please clear the old password on smart device manually before connection (For different models, this operation may be varied, please subject to your user manual).

iOS System

ANDROID System

HDR- High Dynamic Range

HDR captures three photos taken at different exposure levels and combines them into one photo. This optimizes all the details of the object or scene in the photo. Even the features in darker areas can be viewed clearly. (The following pictures are an example of HDR composition.)

Underexposed

Normal exposure

Overexposed

WDR- Wide Dynamic Range

For high light, intense sunlight, or environments with artificial light, WDR allows smart algorithm to correct shadows surrounding a subject. This makes it easier to distinguish details in darker areas of the photo.

With WDR enabled video, clear images are provided when there are not only very bright areas, but also very dark areas in the camera's field of view. (The following pictures are an example of WDR.)
