Note: the only way to stop charging when charging starts is to plug charger out, please try to use power socket which is convenient for plug in and plug out.

1.6 SAR

The SAR limit of USA (FCC) and Canada (IC) is 1.6 W/kg averaged over one gram of tissue. Device types M1211 has also been tested against this SAR limit. The highest SAR value reported under this standard during product certification for use at the ear is 0.273 W/kg and when properly worn on the body is 0.433 W/kg. This device was tested for typical body-worn operations with the back of the handset kept 1.5cm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 1.5cm separation distance between the user's body and the back of the handset. The use of beltclips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

1.7 Accessories

The M1211 phone support below accessories, they are only optional, you can buy from your vendor.

Haier Mobile

Headset.

USB cable.

2. Function introduction

2.5.4 Number (123)

The input is operated directly in text area.

Press number keys from [0] to [9] directly to add corresponding number to edited text area.

2.6 Phonebook

The phone support phonebook function so that you can save often used number and message into SIM card or phonebook on phone, it also provide looking up, adding, modifying, deleting, direct dialing, sending message and other functions at the same time.

Note: when it is ust turned on, phonebook cannot be used because it is initialization, so please wait for a moment.

Classification of phonebook

Phonebook is classified into class: phonebook on SIM card (capacity depends on SIM card) and phonebook on phone (support 500 name card records). The record of two phonebooks is mixed together but operation of them is different. Right of call record on SIM card is a icon like SIM card. Right of phonebook on phone is the default type icon.

- Phonebook on SIM card

Every record in SIM includes a name and a number.

Haier Mobile

- Phonebook on phone (smart phonebook)

Every record in smart phonebook is called 'Name card'. A name card can include

following information:

- Name (40 bytes at most)
- Number (a name card can include five numbers at most, type can be repeated. Maximal length of every number is 21 bytes, where if number length is 21 bytes, first byte must be kept as '+', the other 20 bytes can be "0-9", "*", "#", "w", "p".)
 - ◆ Default number type (If record of SIM card is copied or moved to phone, number will be placed in this area)
 - ◆ Mobile
 - ◆ Office number
 - ◆ Home number
 - ◆ Fax number
 - ◆ Bp call number
- E-mail (50 bytes at most)
- Notes (50 bytes at most)
- Post Address (50 bytes at most)
- Post code (10 bytes at most)

Every name card (when user creates it) should include name (nonnull), and must include a piece of other information at least.

In phonebook of phone, you can group namecard. Groups have Default, Home, Friend, Colleague, Society, Private (you can modify the name of group and corresponding group icon). Different group can be distinguished by different ring.

2.6.1 Looking up

You can enter mixed list of phonebook of SIM card and phone by this menu. Firstly, you can input the front character of the name to be looked or directly press [OK] to enter list. If input character and it exists in list, list scrolls to the first position that meets requirements. Otherwise, display from the first one.

Use skill: press[Down] in stand-by state to enter phonebook list directly.

Haier Mobile

Enter name list, you can move to the records use the character as head by first character of name, then continue press [Up]/[Down] to browse.

Such as key [2], Characters on key [2] only include 'A', 'B' and 'C'.

So when press [2] in phonebook list[A record means the record whose first character is A]:

When first press, if there have records whose first character is A, then move to the first record of A, if there no records whose first character is A, then move to the first record of B, if there no records whose first character is B, then move to the first record of C, if there no records of C, then stay original position. If there have records of A,B,C, then first press 2, move to the first A record, press 2 again then move to the first B record, press 3 again, then move to first C record. If press 2 key after press another key, it will repeat these process.

2.6.2 Add new number

SIM card

If current storage is SIM card, then open a name editor firstly, input name, press [OK], open number editor, input code and press [OK] again to complete the input of a record.

Phone

If current storage is phone, open a name editor firstly, input name, press [OK], here enter name card field option list, you can select different type of information (such as number, e-mail, etc.), press [OK], input information, press [OK] again to complete the input of a record. You can add different field to newly created name card, set default field and do grouping and other operations.

Note: newly created record will be placed in Default group, user can reset it later.

2.6.3 Phonebook list

2.6.3.1 Operation of phonebook list

Phonebook list displays name list, left of the name is the type icon of the record, if it is SIM card record, it is SIM card icon, if it is phone record, then it displays the default number of the phone.

Select some name in the list, you can do following operation by soft option menu on left:

- IP dial: if you still don't IP service number, prompt you to insert it firstly, then do IP dial.
- Send message: send message to default numbers of selected records.
- Send name cards: you can sent selected record in text format by message. *(Note: because length of message is limited, too much record information may be lost*

Haier Mobile

during sending.)

- Change (name): change selected record (name)
- Delete: delete the selected record.
- Change picture (if the name card has associated picture):

Enter picture class list, only the picture that is not bigger than 128×128 will appear, every breadth is on every screen, turn [Up]/[Down] key to select, and press [OK] for confirmation. When some name is associated with a picture, when he call by any stored number or dial any number of the person, corresponding picture will appear on phone.

- Cancell picture (if the name card is associated with a picture):

After prompt you if will cancel and confirmation, cancel association between the name card and picture.

- Set up picture (if no associated picture is set to the namecard):

Change name, delete, change, send name card, display, add new code.

2.6.4 Capacity query

if you select capacity query, you will get capacity information about SIM card and phonebook. It include:

- Used quantity
- Total capacity
- Usage percent

2.6.5 delete all

you can clear all record in SIM card or phonebook by the operation, once it is clear, records can't be resumed, so it need confirmation before clear.

2.6.6 Copy all

SIM card to phone

Only capacity of phonebook is not full, copy one by one is able, you can copy as much as you can until all are copied or capacity of phonebook is full.

When copying, to every record in SIM card, copy its name and number to phonebook, and set number in SIM card as the default number (default field) of the name card.

Phone to SIM card

Only capacity of SIM card is not full, copy one by one is able, you can copy as much as

Haier Mobile

you can until all are copied or capacity of SIM cards is full.

One name card in phonebook can have five number at most, the operation will copy all numbers to SIM card, every number will occupy one record of SIM card. These records have same name that is from the name field of name card.

In addition, if there is no number field in phonebook, jump over the record and copy next record.

2.6.7 Move all

It is similar with above copy all, but after copy, original record will be deleted.

To selected phonebook record, if the record include non-number field (such as e-mail, record, address and post code field), these field will be kept. If selected smart phonebook record only has number field, the record will be deleted after all correspondent fields are moved to SIM cards.

2.6.8 Group set

To 6 group, you can change group name, or set the picture of the group.

2.6.9 Selection of storage position

if you select a kind of phonebook type (SIM card or phone), when you add new numbers, they will be saved to the phonebook of the corresponding type.

2.6.10 IP service number

The function is used to store IP service number you input so that you can dial IP call but need not to input again.

- Only after input IP service number is supported by registered operator, you can dial normally.
- You can look or edit the number.
- When phone change new SIM cards, it will automatically clear all save IP service number.
- Phone has no any check to the IP service you input, you need to confirm it is correct by yourself.

2.6.11 Individual information

You can send, display, change and delete individual information of phone owner here.

Change individual information

According to prompt, you can input different field here. If no, press [OK] to jump directly.

Delete individual information

Haier Mobile

You can clear the individual information of phone owner, which means clear all fields of owner information.

Send individual information

You can send your individual information in text format by message.

(Note: because length of message is limited, too much record information may be lost during sending.)

Display individual information

Display all owner information input in advance, it can be looked up by [Up]/[Down].

2.8 Transfer between phone and PC (optional)

PC Sync software is strong phone information management software, you can use PC Sync software to back the information in your phone by a matching data cable and a computer.

Note: PC Sync is not the standard fittings of the phone, you need to purchase the software and matching data cable from your providers.

PC Sync software mainly realize the synchronization and backup of six kinds of information, which include wallpaper, ring, phonebook, message, MMS and Mp3.

2.8.1 Use preparation for PC Sync software

2.8.1.1 System requirement

To install and run PC Sync software, you need:

- A computer: Pentium200MHz or above processor
32MB or above RAM
Windows 95/98/Me//2000/XP operating system
At least 40 MB or above harddisk space
- A data cable: connect PC and phone

2.8.1.2 Connection of phone and PC

1. Confirm phone is turned on, connect data cable to phone;
2. Connect the other end of the data cable to the USB interface of PC.
3. enter Fun/Connet to PC, display "PC connected"

2.8.2 Use PC Sync software

Before upload and download any files, must confirm data line is correctly connected and connection between PC and phone is successful.

2.8.2.1 Wallpaper

You can use PC Sync software to open a picture file that is saved on PC and to be download to MS, and can zoom in, zoom out, intercept some part of picture or resize it to view fram, and rename

Haier Mobile

it to download to phone later, also can delete or save pictures in phone on PC by PC Sync software.

After successful connection, saved pictures information and blank position of phone will be displayed on list frame, you can select a picture to delete or select a blank position to download new picture, the result is new download picture is used to overwrite original picture on the position.

2.8.2.2 Rings

You can use PC Sync software to open a MIDI, VMD and AMR file saved on PC and to be downloaded to MS, and can try it before download it, then rename it and download it into phone. You also can use PC Sync software to delete rings kept in phone from PC.

After successful connection, downloaded rings information and available blank for new rings of phone are displayed in list frame. You can select a ring to delete or select a blank to download new rings. Surely, you can also select a used position to download, the result is that new downloaded ring overwrites original ring.

2.8.2.3 Phonebook

By phonebook management function, you can synchronize the phonebook on PC and phone 通 so that they have same content; you can also transfer phonebook from phone to PC for browse, or create, delete, change phonebook on phone, then download to phone or keep it in file format on PC; if phone is missed, and contact in phonebook is lost, don't worry about it, you can transfer phonebook file kept in PC to PC software to browse, change, add, delete, then download to any phone that successfully connected to PC.

To change phonebook of phone on PC Sync software, the precondition is to transfer phonebook on phone to PC, then change it, then download them to phone again.

Phonebook kept in phone has two kinds of storage position, one class is stored on SIM card, the other class is stored on phone, contact stored on SIM card can only keep one number, but contact saved in phone can save many number. When phone book on phone is transferred to PC, storage sheet in list frame will show if it is saved in SIM card or in phone.

2.8.2.4 Message

Note: structure and name under this menu is set into SIM card by network provider. Different STK provider may provide different service. Some SIM card don't support STK service, which cannot be changed.

STK (SIM TOOL KIT) allows smart SIM operate its own application software.

STK can receive and send GSM message data to take the function of interface between SIM card and message, at the same it also allow SIM card to operate its own application software. These function often display on the phone screen that can be activated by software. Used friend text menu to replace mechanical "dial-receive-answer" to allow you process complicated information index operation.

STK is the increment operation of SIM card, provide development environment. Which is a simple and easy-operation platform. Phone supporting the STK card can provide extra STK menu, content of menu is read from STK card from mobile, you cannot change. According to the type of STK, content of menu may be not fixed, it can be change by network operator.

The phone support increment operation provided by STK, different operator provide different type of operation.
