

Work Basis

RECEIVER GC18UF

1、 After MCU receives Mouse or Keyboard the data, after handle properly by USB data transfer to PC. or PC by USB data transfer for MCU

2、 After RF IC initialization, has been in the receive pattern, when will receive one to conform to the itself Address database package, an automatic production ACK signal reply will transmit this database package Keyboard or Mouse, and will inform MCU to have receives a database package to wait for that MCU will read.

3、 After RF IC initialization, has been in the receive pattern, when will receive one to conform to the itself Address database package, an automatic production ACK signal reply will transmit this database package Keyboard or Mouse, and will inform MCU to have receives a database package to wait for that MCU will read.
