

Vertical Mouse

User Manual

Thank you for choosing this special wireless vertical mouse. Please read the user manual carefully when using this product.

>Contents:

- Wireless vertical mouse -----X1
- User manual -----X1
- USB nano receiver -----X1
- Battery (AA#) -----X1
- CD driver -----X1

>Button Function:

>Features

- Vertical mouse, worm bionic shape design
- Anti-skidding design and built-in weight
- Ergonomic design with removable palm, reduce hand and wrist pain

> Installation

Plug the USB connector for wired mouse (or USB Nano receiver for wireless version) to the USB port in the computer, after detecting successfully it will work normally.

> Specification

DPI	800/1000/1600, DPI cycle is on the bottom of the mouse
Polling rate	125Hz
Working Voltage	1.5V
Working Current	≤ 16mA

> Battery Installation

1. Open the battery cover.
2. Put the battery into the mouse in the correct direction.
3. Install the battery cover.

Note:

In order to achieve the best economical effect, the intelligent power saving technology is adopted. When your mouse stops moving, it will switch to the power saving mode automatically, and as this time pass, it will use less power.

>Receiver Connection

1. Insert the USB Nano receiver to your computer by USB port.
2. After detecting ok by your computer, the mouse can work normally in ON mode.

>Building Up the Connection Between Mouse and Receiver

If your mouse cannot work normally, you can try to build up the connection again between mouse and receiver, as following steps:

1. Take out the Nano receiver from computer and insert again, it will detect automatically for about 15 seconds.
2. Keep the mouse in ON mode and with battery in correct direction.
3. Keep the effective distance within 10 CM between the mouse and receiver.
4. Press the middle button (scroll wheel) and right button at the same time for about 1~3 seconds, then release it. The connection is being built for about 10 seconds.
5. If cannot build up the connection in 10 seconds, please repeat the above steps.

> Usage Tips

- Please switch ON/OFF button to be OFF mode if you do not use the mouse.
- Please take out the battery if you do not use the wireless mouse for a long time, and keep the battery in a cool and dry place.
- Please do not use the battery if leading, discoloration, distortion or any other abnormality happens.
- It will save more power to use the mouse on the light color media than a dark one.

> Debugging Tips

- Check the receiver if is connected to the USB port.
- Check the ON/OFF button if in ON mode.
- Check the battery if is installed in the correct direction.
- Check the batter capacity if is enough.
- Check the effective distance between mouse the receiver and shorten it.
- Rebuild up the connection between the mouse and receiver.

> Working Environment

- The radio signal can penetrate lignin, glass and other non-metallic objects, realizing 360 degree fee transmit. However, it cannot penetrate the metal materials. So please do not put the mouse and the receiver onto the metallic tabletop. The ideal distance is above 20 CM.
- Please be sure there is no big metal between the mouse and receiver, otherwise the connection will be affected. For desktop, USB extending port or front-set USB port is better.
- The receiver should be far away from the monitor, outside discs driver or other electronic products. 20 CM distance is suggested in order to prevent the radio disturbance produced by other electronic products.
- Optical mouse is suitable for operating media wooden, paper or cloth, but not for the lens cover, such as glass and smooth rubber. A mouse pad is needed in such environment.
- The standardized receiving distance we offered is under certain radio disturbance environment, the normal environment are better, the actual receiving distance is higher than standardized, but if mix-machine, motor, electric drill and other strong equipments operating nearby, which may lead to slowly receiving or other abnormality.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interferences in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
-- Reorient or relocate the receiving antenna.
-- Increase the separation between the equipment and receiver.
-- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
-- Consult the dealer or an experienced radio/TV technician for help.
