FCC ID: SH6MDBT42T

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] *·[√f(GHz)] ≤ 3.0

The tune-up power is 5.73 dBm +/- 0dB, therefore the highest tune-up power is
5.73 dBm (3.74 mW) @ 2402 MHz

When the minimum *test separation distance* is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

So,

(3.74mW / 5mm) * (2.402GHz ^0.5)= 1.2

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] * [√f(GHz)] = 1.2 < 3.0

Therefore, standalone SAR measurements are not required for both head and body.

Note:
1. The tune up power referred the AVG power of the test report T200824W09-RP for SAR test exclusion purpose.
