## 1.0 INTRODUCTION

### 1.1 PURPOSE

The purpose of this document is to describe the tests applied by NTS Canada to demonstrate compliance of the SDID1010-3-2 from Wireless Dynamics Inc. to FCC Part 15 Subpart C section 15.225 for Intentional Radiator and the equivalent sections of Industry Canada's RSS 210 Issue 5

## 2.0 EUT DESCRIPTION

### 2.1 CONFIGURATION

#### Description of EUT

	Name	Model	Revision	Serial Number
EUT	SDID Card	SDID1010		01, 02
Classification	Low Power Transmitter			
Size (m)	NA			
Weight	NA			
Power	3VDC			
Description	13.56 MHz RFID Reader			

### 2.2 MODE OF OPERATION

The SDID1010 was tested while in a Reader/Writer mode with worst case results reported. For Radiated emissions the EUT was checked in three orthogonal planes with worst case results reported. The EUT was also checked at the three available data rates for worst case. For testing purposes the SDID card was plugged into an extender board to present a worst case emissions signature (no shielding from host system).

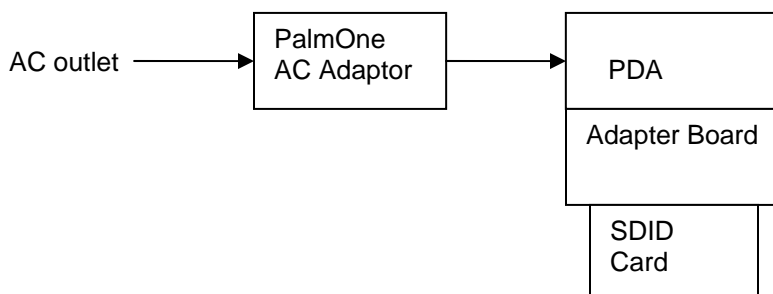

## 3.0 SUPPORT EQUIPMENT

### 3.1 CONFIGURATION

All support equipment information was supplied by the client and was not verified by NTS.

The test results contained in this report refer exclusively to the product(s) presented for testing. The test results do not cover models or products not referred herein. This test report should not be published or duplicated in whole or part without permission from the testing body and the customer.

NTS Product Integrity Laboratory, 5151-47<sup>th</sup> Street N.E. Tel: 403-568-6605, Fax: 403-568-6970

**Note :** To present the worst case test configuration an extender board (passive) was used to expose the SDID1010 card, so that the emission level would not be dependent on the shielding of this device.

### A.5. Test Method

The EUT was placed on a non-conductive table 0.8 meters above the ground plane. The table was centered on a motorized turntable. The emission levels were maximized by rotating the turntable through 360 degrees, a measurement antenna was positioned at a distance of 10meters as measured from the closest point of the EUT, and scanned from 1-4 meters.

A spectrum analyzer with peak detection was used to find the maximum field strength during the scans. The EUT was tested in 3 orthogonal planes, with the worst case results being reported.

The test results contained in this report refer exclusively to the product(s) presented for testing. The test results do not cover models or products not referred herein. This test report should not be published or duplicated in whole or part without permission from the testing body and the customer.
