

Differences between NBB Radio Control Transmitter HyPRO 6, HyPRO 8

-Letter of Attestation-

The differences are only related to the maximum number of joy sticks available. The HyPRO 6 version provides up to 6 joy sticks. The HyPRO 8 version provides up to 8 joysticks.

In both versions the joy sticks are interconnected by the same printed circuit board 2.100.1236. The PCB holds connection patterns for the placement of 6 respective 8 joy sticks.

We confirm that the all electronic boards (layout, BOM etc.) remain the same with both versions. Details see additional documentation for this matter.
