RE: Xirrus Model XS-3500-4

Dear Examiner:

The Xirrus model XS-3500-4 product software will only allow the user to select channels and power levels that have been tested and approved for use in the respective country. Specifically, product shipped in the United States is designed to only use channels 1 to 11 in the 2400 MHz band and channels 36 to 64 or 149 to 161 in the UNII band.

Due to the design of the product software, and the fact that the maximum transmit power for each channel is hard-coded into each radio, the user is unable to select a channel outside of the approved range. Even if the user were to request a higher power level, the radio firmware will limit the output power to the approved level.

Sincerely,

**XIRRUS, INC.**
