1. Purpose of tuning up
2. How is it used ?
3. Equipment used/Setup

Purpose of tuning up

- Make sure the measured maximum output power 8.8 dBm and shall be within the calibrated tolerance ± 0.5 dBm.
- The constellation error shall meet the requirements for OFDM modulation .
- The transmit symbol clock frequency tolerances shall meet the requirements for OFDM modulation.
- The transmit center frequency tolerances shall meet the requirements for all modulation types.

How it is used ?

- Using RF cable to connect IQ-Flex and the antenna port of DUT.
- Insert the DUT to PC interface.
- Run Test S/W -> ART
- Run IQ-Flex, and select standard for measurement.
- Input the Cable Loss Factor -> External Attenuate.
- Do the test items and record the reading.

Equipment used/Setup
