## **Notice**

#### Content

The measurements shown in this report were made in accordance with the procedures indicated, and the emissions from this equipment were found to be within the limits applicable. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them. It is further stated that upon the basis of the measurements made, the equipment tested is capable of operation in accordance with the requirements of the FCC / ISED Rules under normal use and maintenance.

The results shown in this test report only apply to the sample(s), as received, provided by the applicant, unless otherwise stated.

The test results have only been applied with the test methods required by the standard(s).

When confirmation of authenticity of this test report is required, please contact www.hct.co.kr

This test report provides test result(s) under the scope accredited by the Korea Laboratory Accreditation Scheme (KOLAS), which signed the ILAC-MRA.

(KOLAS (KS Q ISO/IEC 17025) Accreditation No. KT197)

## 2. Requirements for Frequency Hopping Device(FHSS) transmitter(15.247)

This LoRa module has been tested by a LoRa Qualification Lab, and we confirm the following:

- 1) This system is hopping pseudo-randomly.
- 2) Each frequency is used equally on the average by each transmitter.
- 3) FHSS operates only during the transmission of the signal, and not while receiving the signal.
  - 15.247(g): The system, consisting of both the transmitter and the receiver, must be designed to comply with all of the regulations in this Section 15.247 should the transmitter be presented with a continuous data (or information) stream.
  - 15.247(h): The coordination of frequency hopping systems in any other manner for the express purpose of avoiding the simultaneous occupancy of individual hopping frequencies by multiple transmitters is not permitted.
  - RSS-247 5.1 (a): The coordination of frequency hopping systems in any other manner for the express purpose of avoiding the simultaneous occupancy of individual hopping frequencies by multiple transmitters is not permitted.

F-TP22-03 (Rev. 05) Page 6 of 69

#### 3. TEST METHODOLOGY

The measurement procedure described in the American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Device (ANSI C63.10-2013, KDB 558074) is used in the measurement of the test device.

#### **EUT CONFIGURATION**

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner that intends to maximize its emission characteristics in a continuous normal application.

#### **EUT EXERCISE**

The EUT was operated in the engineering mode to fix the Tx frequency that was for the purpose of the measurements. According to its specifications, the EUT must comply with the requirements of the Section 15.207, 15.209 and 15.247 under the FCC Rules Part 15 Subpart C. / RSS-Gen issue 5, RSS-247 issue 3.

#### **GENERAL TEST PROCEDURES**

#### **Conducted Emissions**

The EUT is placed on the turntable, which is 0.8 m above ground plane. According to the requirements in Section 6.2 of ANSI C63.10. (Version :2013) Conducted emissions from the EUT measured in the frequency range between 0.15 MHz and 30 MHz using CISPR Quasi-peak and average detector modes.

#### **Radiated Emissions**

The EUT is placed on a turn table, which is 0.8 m above ground plane below 1 GHz. Above 1 GHz with 1.5 m using absorbers between the EUT and receive antenna. The turntable shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3 m away from the receiving antenna, which varied from 1 m to 4 m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the max. emission, the relative positions of this hand-held transmitter (EUT) was rotated through three orthogonal axes according to the requirements in Section 6.6.5 of ANSI C63.10. (Version: 2013)

F-TP22-03 (Rev. 05) Page 7 of 69

#### **DESCRIPTION OF TEST MODES**

The EUT has been tested under operating condition. Test program used to control the EUT for staying in continuous transmitting and receiving mode is programmed.

#### 4. INSTRUMENT CALIBRATION

The measuring equipment, which was utilized in performing the tests documented herein, has been calibrated in accordance with the manufacturer's recommendations for utilizing calibration equipment's, which is traceable to recognized national standards.

Especially, all antenna for measurement is calibrated in accordance with the requirements of C63.5 (Version: 2017).

#### 5. FACILITIES AND ACCREDITATIONS

#### **FACILITIES**

The SAC(Semi-Anechoic Chamber) and conducted measurement facility used to collect the radiated data are located at the 74, Seoicheon-ro 578beon-gil,

Majang-myeon, Icheon-si, Gyeonggi-do, 17383, Rep. of KOREA.

The site is constructed in conformance with the requirements of ANSI C63.4. (Version :2014) and CISPR Publication 22.

Detailed description of test facility was submitted to the Commission and accepted dated March 31, 2022 (CAB identifier: KR0032).

For ISED, test facility was accepted dated April 06, 2022 (CAB identifier: KR0032).

## **EQUIPMENT**

Radiated emissions are measured with one or more of the following types of Linearly polarized antennas: tuned dipole, bi-conical, log periodic, bi-log, and/or ridged waveguide, horn. Spectrum analyzers with pre-selectors and quasi-peak detectors are used to perform radiated measurements. Conducted emissions are measured with Line Impedance Stabilization Networks and EMI Test Receivers. Calibrated wideband preamplifiers, coaxial cables, and coaxial attenuators are also used for making measurements.

All receiving equipment conforms to CISPR Publication 16-1, "Radio Interference Measuring Apparatus and Measurement Methods."

F-TP22-03 (Rev. 05) Page 8 of 69

## 6. ANTENNA REQUIREMENTS

#### According to FCC 47 CFR § 15.203:

"An intentional radiator antenna shall be designed to ensure that no antenna other than that furnished by the responsible party can be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section."

- (1) The antennas of this E.U.T are permanently attached.
- (2) The E.U.T Complies with the requirement of § 15.203

#### According to RSS-GEN(Issue 5) Section 6.8:

The applicant for equipment certification shall provide a list of all antenna types that may be used with the transmitter, where applicable (i.e. for transmitters with detachable antenna), indicating the maximum permissible antenna gain (in dBi) and the required impedance for each antenna. The test report shall demonstrate the compliance of the transmitter with the limit for maximum equivalent isotropically radiated power (e.i.r.p.) specified in the applicable RSS, when the transmitter is equipped with any antenna type, selected from this list.

For expediting the testing, measurements may be performed using only the antenna with highest gain of each combination of transmitter and antenna type, with the transmitter output power set at the maximum level. However, the transmitter shall comply with the applicable requirements under all operational conditions and when in combination with any type of antenna from the list provided in the test report (and in the notice to be included in the user manual, provided below).

When measurements at the antenna port are used to determine the RF output power, the effective gain of the device's antenna shall be stated, based on a measurement or on data from the antenna's manufacturer.

The test report shall state the RF power, output power setting and spurious emission measurements with each antenna type that is used with the transmitter being tested.

F-TP22-03 (Rev. 05) Page 9 of 69

## 7. MEASUREMENT UNCERTAINTY

The measurement uncertainties shown below were calculated in accordance with the requirements of ANSI C63.10-2013.

All measurement uncertainty values are shown with a coverage factor of k = 2 to indicate a 95 % level of confidence.

The measurement data shown herein meets or exceeds the  $U_{CISPR}$  measurement uncertainty values specified in CISPR 16-4-2 and, thus, can be compared directly to specified limits to determine compliance.

| Parameter                                | Expanded Uncertainty (dB)                        |
|--|--|
| Conducted Disturbance (150 kHz ~ 30 MHz) | 1.90 ( Confidence level about 95 %, <i>k</i> =2) |
| Radiated Disturbance (9 kHz ~ 30 MHz)    | 4.14 ( Confidence level about 95 %, <i>k</i> =2) |
| Radiated Disturbance (30 MHz ~ 1 GHz)    | 5.82 ( Confidence level about 95 %, <i>k</i> =2) |
| Radiated Disturbance (1 GHz ~ 18 GHz)    | 5.74 ( Confidence level about 95 %, <i>k</i> =2) |
| Radiated Disturbance (18 GHz ~ 40 GHz)   | 5.76 ( Confidence level about 95 %, <i>k</i> =2) |
| Radiated Disturbance (Above 40 GHz)      | 5.52 ( Confidence level about 95 %, <i>k</i> =2) |

F-TP22-03 (Rev. 05) Page 10 of 69

#### 8. DESCRIPTION OF TESTS

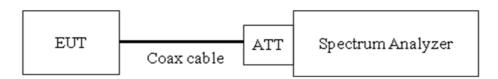

#### 8.1. Conducted Maximum Peak Output Power

#### Limit

The maximum peak output power of the intentional radiator shall not exceed the following:

- 1. For frequency hopping systems operating in the 902-928 MHz band: 1 watt for systems employing at least 50 hopping channels; and, 0.25 watts for systems employing less than 50 hopping channels, but at least 25 hopping channels
- 2. The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi.

## **Test Configuration**

#### **Test Procedure**

The transmitter output is connected to the Spectrum Analyzer. The Spectrum Analyzer is set to the peak detector mode. This test is performed with hopping off.

The Spectrum Analyzer is set to  $(7.8.5 \text{ in ANSI } 63.10\text{-}2013 \& Procedure } 10(b)(6)(i) \text{ in KDB } 558074 \text{ } v05r02)$ 

- 1) Span: approximately 5 times the 20 dB bandwidth, centered on a hopping channel
- 2) RBW > the 20 dB bandwidth of the emission being measured
- 3)  $VBW \ge RBW$
- 4) Sweep = Auto
- 5) Detector = Peak
- 6) Trace = Max hold

F-TP22-03 (Rev. 05) Page 11 of 69

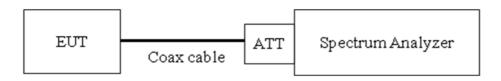

#### 8.2. Conducted Band Edge(Out of Band Emissions)

#### Limit

According to § 15.247(d), in any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits.

#### **Test Configuration**

#### **Test Procedure**

This test is performed with hopping off and hopping on.

The Spectrum Analyzer is set to  $(6.10.4 \text{ in ANSI } 63.10\text{-}2013 \& Procedure } 8.5 \text{ and } 8.6 \text{ in KDB } 558074 \\ v05r02)$ 

- 1) Span: Wide enough to capture the peak level of the emission operating on the channel closest to the band edge, as well as any modulation products which fall outside of the authorized band of operation
- 2) Reference level: As required to keep the signal from exceeding the maximum instrument input mixer level for linear operation. In general, the peak of the spectral envelope shall be more than [10 log (OBW/RBW)] below the reference level.
- 3) Attenuation: Auto (at least 10 dB preferred).
- 4) Sweep time: Coupled.
- 5) RBW: 100 kHz6) VBW: 300 kHz7) Detector: Peak
- 8) Trace: Max hold

F-TP22-03 (Rev. 05) Page 12 of 69

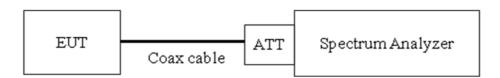

## 8.3. Frequency Separation & 20 dB Bandwidth

#### Limit

According to § 15.247(a)(1), Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater.

#### **Test Configuration**

## **Test Procedure(Frequency Separation)**

The Channel Separation test is performed with hopping on.

And the 20 dB Bandwidth test is performed with hopping off.

The Spectrum Analyzer is set to (7.8.2 in ANSI 63.10-2013 & Procedure 10(b)(6)(iii) in KDB 558074 v05r02)

- 1) Span: Wide enough to capture the peaks of two adjacent channels
- 2) RBW: Start with the RBW set to approximately 30 % of the channel spacing; adjust as necessary to best identify the center of each individual channel.
- 3)  $VBW \ge RBW$
- 4) Sweep: Auto
- 5) Detector: Peak
- 6) Trace: Max hold
- 7) All the trace to stabilize.
- 8) Use the marker-delta function to determine the separation between the peaks of the adjacent channels. Compliance of an EUT with the appropriate regulatory limit shall be determined. A plot of the data shall be included in the test report.

F-TP22-03 (Rev. 05) Page 13 of 69

## Test Procedure (20 dB Bandwidth)

And the 20 dB Bandwidth test is performed with hopping off.

The Spectrum Analyzer is set to (6.9.2 in ANSI 63.10-2013)

1) Span: Set between two times and five times the OBW

2) RBW: 1 % to 5 % of the OBW.

3) VBW  $\geq$  3 x RBW

4) Sweep: Auto

5) Detector: Peak

6) Trace: Max hold

7) All the trace to stabilize.

F-TP22-03 (Rev. 05) Page 14 of 69

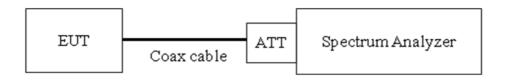

## 8.4. Number of Hopping Frequencies

## Limit

According to § 15.247(a)(1)(i), For frequency hopping systems operating in the 902-928 MHz band: if the 20 dB bandwidth of the hopping channel is less than 250 kHz, the system shall use at least 50 hopping frequencies

## **Test Configuration**

## **Test Procedure**

The Bluetooth frequency hopping function of the EUT was enabled.

The Spectrum Analyzer is set to (7.8.3 in ANSI 63.10-2013 & Procedure 10(b)(4) in KDB 558074 v05r02)

- 1) Span: the frequency band of operation
- 2) RBW: To identify clearly the individual channels, set the RBW to less than 30 % of the channel spacing or the 20 dB bandwidth, whichever is smaller.
- 3)  $VBW \ge RBW$
- 4) Sweep: Auto
- 5) Detector: Peak
- 6) Trace: Max hold
- 7) Allow the trace to stabilize.

F-TP22-03 (Rev. 05) Page 15 of 69

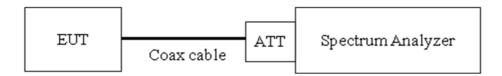

## 8.5. Time of Occupancy

#### Limit

According to § 15.247(a)(1)(i), For frequency hopping systems operating in the 902-928 MHz band: if the 20 dB bandwidth of the hopping channel is less than 250 kHz, the average time of occupancy on any frequency shall not be greater than 0.4 seconds within a 20 second period

# **Test Configuration**

## **Test Procedure**

This test is performed with hopping off.

The Spectrum Analyzer is set to (7.8.4 in ANSI 63.10-2013 & Procedure 10(b)(6)(iv) in KDB 558074 v05r02)

- 1) Span: Zero span, centered on a hopping channel
- 2) RBW shall be  $\leq$  channel spacing and where possible RBW should be set >> 1 / T, where T is the expected dwell time per channel.
- 3) Sweep = as necessary to capture the entire dwell time per hopping channel
- 4) Detector: Peak
- 5) Trace: Max hold

The marker-delta function was used to determine the dwell time.

F-TP22-03 (Rev. 05) Page 16 of 69

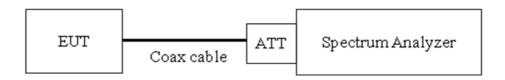

## 8.6. Conducted Spurious Emissions

## Limit

Conducted > 20 dBc

#### **Test Configuration**

#### **Test Procedure**

Conducted RF measurements of the transmitter output were made to confirm that the EUT antenna port conducted emissions meet the specified limit and to identify any spurious signals that require further investigation or measurements on the radiated emissions site.

The transmitter output is connected to the spectrum analyzer.

The Spectrum Analyzer is set to  $(7.8.8 \text{ in ANSI } 63.10\text{-}2013 \& Procedure } 8.5 \text{ and } 8.6 \text{ in KDB } 558074 \text{ } \text{v}05\text{r}02)$ 

1) Span: 30 MHz to 10 times the operating frequency in GHz.

RBW: 100 kHz
 VBW: 300 kHz
 Sweep: Coupled
 Detector: Peak

Measurements are made over the 30 MHz to 10 GHz range with the transmitter set to the lowest, middle, and highest channels.

This test is performed with hopping off.

F-TP22-03 (Rev. 05) Page 17 of 69

# **Factors for frequency**

| Freq(MHz) | Factor(dB) |
|-----------|------------|
| 30        | 20.10      |

# **Test Configuration**

#### Below 30 MHz

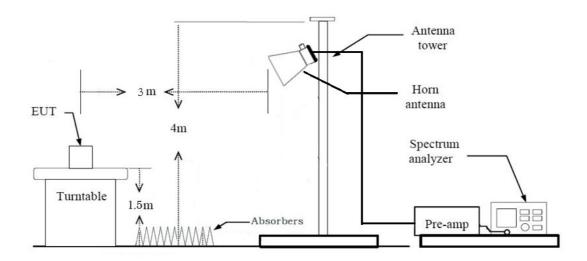

#### 30 MHz - 1 GHz

F-TP22-03 (Rev. 05) Page 20 of 69

#### Above 1 GHz

# Test Procedure of Radiated spurious emissions (Below 30 MHz)

- 1. The EUT was placed on a non-conductive table located on semi-anechoic chamber.
- 2. The loop antenna was placed at a location 3 m from the EUT
- 3. The EUT is placed on a turntable, which is 0.8 m above ground plane.
- 4. We have done x, y, z planes in EUT and horizontal and vertical polarization and Parallel to the ground plane in detecting antenna.
- 5. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level.
- 6. Distance Correction Factor(0.009 MHz 0.490 MHz) =  $40\log(3 \text{ m}/300 \text{ m}) = -80 \text{ dB}$ Measurement Distance : 3 m
- 7. Distance Correction Factor(0.490 MHz 30 MHz) = 40log(3 m/30 m) = -40 dBMeasurement Distance : 3 m
- 8. Spectrum Setting
  - Frequency Range = 9 kHz ~ 30 MHz
  - Detector = Peak
  - Trace = Maxhold
  - -RBW = 9 kHz
  - VBW ≥  $3 \times RBW$
- 9. Total = Measured Level + Antenna Factor(A.F) + Cable Loss(C.L) + Distance Factor(D.F)
- 10. Measurement value only up to 6 maximum emissions noted, or would be lesser if no specific emissions from the EUT are recorded (ie: margin > 20 dB from the applicable limit) and considered that's already beyond the background noise floor.

F-TP22-03 (Rev. 05) Page 21 of 69

## KDB 414788 OFS and Chamber Correlation Justification

Base on FCC 15.31 (f) (2): measurements may be performed at a distance closer than that specified in the regulations; however, an attempt should be made to avoid making measurements in the near field

OFS and chamber correlation testing had been performed and chamber measured test result is the worst case test result.

#### Test Procedure of Radiated spurious emissions(Below 1 GHz)

- 1. The EUT was placed on a non-conductive table located on semi-anechoic chamber.
- 2. The EUT is placed on a turntable, which is 0.8 m above ground plane.
- 3. The Hybrid antenna was placed at a location 3 m from the EUT, which is varied from 1 m to 4 m to find out the highest emissions.
- 4. We have done x, y, z planes in EUT and horizontal and vertical polarization in detecting antenna.
- 5. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level.
- 6. Spectrum Setting
  - (1) Measurement Type(Peak):
    - Measured Frequency Range: 30 MHz 1 GHz
    - Detector = Peak
    - Trace = Maxhold
    - RBW = 100 kHz
    - VBW ≥  $3 \times RBW$
  - (2) Measurement Type(Quasi-peak):
    - Measured Frequency Range: 30 MHz 1 GHz
    - Detector = Quasi-Peak
    - RBW = 120 kHz
    - ※In general, (1) is used mainly
- 7. Total = Measured Level + Antenna Factor(A.F) + Cable Loss(C.L) + Distance Factor(D.F)
- 8. Measurement value only up to 6 maximum emissions noted, or would be lesser if no specific emissions from the EUT are recorded (ie: margin > 20 dB from the applicable limit) and considered that's already beyond the background noise floor.

F-TP22-03 (Rev. 05) Page 22 of 69

#### Test Procedure of Radiated spurious emissions (Above 1 GHz)

- 1. Radiated test is performed with hopping off.
- 2. The EUT is placed on a turntable, which is 1.5 m above ground plane.
- 3. We have done x, y, z planes in EUT and horizontal and vertical polarization in detecting antenna.
- 4. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level.
- 5. EUT is set 3 m away from the receiving antenna, which is varied from 1m to 4m to find out the highest emissions.
- 6. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
- 7. Each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 8. Spectrum Setting
  - (1) Measurement Type(Peak):
    - Measured Frequency Range 1 GHz 10th Harmonics
    - Detector = Peak
    - Trace = Maxhold
    - RBW = 1 MHz
    - VBW ≥  $3 \times RBW$
  - (2) Measurement Type(Average):
    - We performed using a reduced video BW method was done with the analyzer in linear mode
    - Measured Frequency Range 1 GHz 10th Harmonics
    - Detector = Peak
    - Trace = Maxhold
    - RBW = 1 MHz
    - VBW  $\geq 1/\tau$  Hz, where  $\tau$  = pulse width in seconds
      - #The actual setting value of VBW = 1 kHz
- 9. Measurement value only up to 6 maximum emissions noted, or would be lesser if no specific emissions from the EUT are recorded (ie: margin > 20 dB from the applicable limit) and considered that's already beyond the background noise floor.
- 10. Distance extrapolation factor = 20log (test distance / specific distance) (dB)
- 11. Total (Measurement Type: Peak)
  - = Peak Measured Value

Total(Measurement Type: Average)

- = Average Measured Value
- We apply to the offset in range 1 GHz 18 GHz
- The offset = Antenna Factor(A.F) + Cable Loss(C.L) + Distance Factor(D.F) Amp.Gain(A.G)

F-TP22-03 (Rev. 05) Page 23 of 69

#### 8.8. AC Power line Conducted Emissions

#### Limit

For an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a  $50 \, \mu H/50$  ohms line impedance stabilization network (LISN).

| Fraguency Pango (MHz) | Limits                  | (dB <sub>μ</sub> V)     |
|-----------------------|-------------------------|-------------------------|
| Frequency Range (MHz) | Quasi-peak              | Average                 |
| 0.15 to 0.50          | 66 to 56 <sup>(a)</sup> | 56 to 46 <sup>(a)</sup> |
| 0.50 to 5             | 56                      | 46                      |
| 5 to 30               | 60                      | 50                      |

<sup>(</sup>a) Decreases with the logarithm of the frequency.

Compliance with this provision shall be based on the measurement of the radio frequency voltage between each power line (LINE and NEUTRAL) and ground at the power terminals.

## **Test Configuration**

See test photographs attached in Annex A for the actual connections between EUT and support equipment.

#### **Test Procedure**

- 1. The EUT is placed on a wooden table 80 cm above the reference ground plane.
- 2. The EUT is connected via LISN to a test power supply.
- 3. The measurement results are obtained as described below:
- 4. Detectors: Quasi Peak and Average Detector.

## **Sample Calculation**

Quasi-peak(Final Result) = Measured Level + Correction Factor

F-TP22-03 (Rev. 05) Page 24 of 69

## 8.9. Receiver Spurious Emissions

## Limit

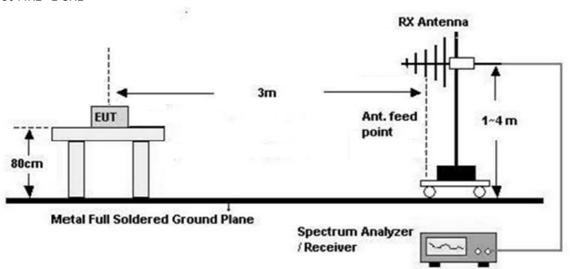

| Frequency (MHz) | Field Strength (μV/m) | Measurement Distance (m) |
|-----------------|-----------------------|--------------------------|
| 30-88           | 100                   | 3                        |
| 88-216          | 150                   | 3                        |
| 216-960         | 200                   | 3                        |
| Above 960       | 500                   | 3                        |

Note:

Measurements for compliance with the limits in table may be performed at distances other than 3 metres.

## **Test Configuration**

## 30 MHz - 1 GHz

F-TP22-03 (Rev. 05) Page 25 of 69

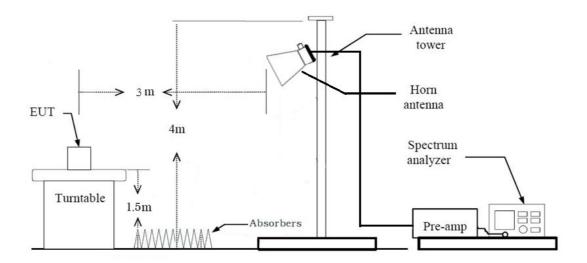

## Test Procedure of Receiver Spurious Emissions (Below 1GHz)

- 1. The EUT was placed on a non-conductive table located on semi-anechoic chamber.
- 2. The EUT is placed on a turntable, which is 0.8 m above ground plane.
- 3. The Hybrid antenna was placed at a location 3 m from the EUT, which is varied from 1 m to 4 m to find out the highest emissions.
- 4. We have done x, y, z planes in EUT and horizontal and vertical polarization in detecting antenna.
- 5. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level.
- 6. Spectrum Setting
  - (1) Measurement Type(Peak):
    - Measured Frequency Range: 30 MHz 1 GHz
    - Detector = Peak
    - Trace = Maxhold
    - RBW = 100 kHz
    - VBW ≥  $3 \times RBW$
  - (2) Measurement Type(Quasi-peak):
    - Measured Frequency Range: 30 MHz 1 GHz
    - Detector = Quasi-Peak
    - RBW = 120 kHz
- 7. Total = Measured Level + Antenna Factor(A.F) + Cable Loss(C.L)

F-TP22-03 (Rev. 05) Page 26 of 69

#### Above 1 GHz

## Test Procedure of Radiated spurious emissions (Above 1 GHz)

- 1. The EUT is placed on a turntable, which is 1.5 m above ground plane.
- 2. We have done x, y, z planes in EUT and horizontal and vertical polarization in detecting antenna.
- 3. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level.
- 4. EUT is set 3 m away from the receiving antenna, which is varied from 1m to 4m to find out the highest emissions.
- 5. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
- 6. Each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 7. Spectrum Setting
  - (1) Measurement Type(Peak):
    - Measured Frequency Range: 1 GHz 25 GHz
    - Detector = Peak
    - Trace = Maxhold
    - RBW = 1 MHz
    - VBW  $\geq$  3 x RBW
  - (2) Measurement Type(Average):
    - Duty cycle < 98%, duty cycle variations are less than  $\pm 2\%$
    - Measured Frequency Range: 1 GHz 25 GHz
    - Detector = RMS
    - Averaging type = power (*i.e.*, RMS)

F-TP22-03 (Rev. 05) Page 27 of 69

- RBW = 1 MHz
- VBW ≥  $3 \times RBW$
- Sweep time = auto.
- 8. Measurement value only up to 6 maximum emissions noted, or would be lesser if no specific emissions from the EUT are recorded (ie: margin > 20 dB from the applicable limit) and considered that's already beyond the background noise floor.
- 9. Total = Measured Level + Antenna Factor(A.F) + Cable Loss(C.L) Amp Gain(A.G) + Distance Factor(D.F)

F-TP22-03 (Rev. 05) Page 28 of 69

## 8.10. Worst case configuration and mode

#### **Radiated test**

- 1. All modes of operation were investigated and the worst case configuration results are reported.
  - Mode: Stand alone
- 2. EUT Axis
  - Radiated Spurious Emissions: Z
- 3. All data rate of operation were investigated and the test results are worst case of each mode.
  - 125 kHz (SF 7, 8, 9, 10)
  - Worst case: 125 kHz SF 10
- 4. All Packet length of operation were investigated and the test results are worst case of each mode.
  - 125k SF 7, 8, 9 (1 to 36)
  - 125k SF 10 (1 to 24)
  - Worst case: Packet length 24
- 5. All position of loop antenna were investigated and the test result is a no critical peak found at all positions.
  - Position: Horizontal, Vertical, Parallel to the ground plane

## **AC Power line Conducted Emissions**

1. We don't perform powerline conducted emission test. Because EUT is used DC.

## **Conducted test**

- 1. All modes of operation were investigated and the worst case configuration results are reported.
  - Mode: 125kHz (SF 7, 8, 9, 10)
  - Worst case: 125 kHz SF7, 10
- 2. All Packet length of operation were investigated and the test results are worst case of each mode.
  - 125k SF 7, 8, 9 (1 to 36)
  - 125k SF 10 (1 to 24)
  - Worst case: Packet length 1 & 36 (SF7), 1 &24 (SF10)

# 11. LIST OF TEST EQUIPMENT

# **Conducted Test**

| Equipment                                    | Model     | Manufacturer    | Serial No. | Due to<br>Calibration | Calibration<br>Interval |
|--|-----------|-----------------|------------|-----------------------|-------------------------|
| LISN   | ENV216    | Rohde & Schwarz | 102245     | 08/02/2024            | Annual                  |
| EMI Test Receiver                            | ESR       | Rohde & Schwarz | 101910     | 05/26/2024            | Annual                  |
| Temperature Chamber                          | SU-642    | ESPEC           | 93008124   | 02/22/2024            | Annual                  |
| Signal Analyzer                              | N9030A    | Keysight        | MY55410508 | 09/04/2024            | Annual                  |
| Power Meter                                  | N1911A    | Agilent         | MY45100523 | 03/06/2024            | Annual                  |
| Power Sensor                                 | N1921A    | Agilent         | MY57820067 | 03/06/2024            | Annual                  |
| Directional Coupler                          | 87300B    | Agilent         | 3116A03621 | 10/30/2024            | Annual                  |
| Power Splitter                               | 11667B    | Hewlett Packard | 10545      | 02/06/2024            | Annual                  |
| DC Power Supply                              | E3632A    | Agilent         | KR75305528 | 01/03/2024            | Annual                  |
| Attenuator(10 dB)(DC-26.5 GHz)               | 8493C-010 | Agilent         | 08285      | 06/02/2024            | Annual                  |
| Attenuator(20 dB)                            | 18N-20dB  | Rohde & Schwarz | 8          | 03/08/2024            | Annual                  |
| Software                                     | EMC32     | Rohde & Schwarz | N/A        | N/A                   | N/A                     |
| FCC WLAN&BT&BLE Conducted Test Software v3.0 | N/A       | HCT CO., LTD.   | N/A        | N/A                   | N/A                     |
| Bluetooth Tester                             | СВТ       | Rohde & Schwarz | 100808     | 02/16/2024            | Annual                  |

# Note:

- 1. Equipment listed above that calibrated during the testing period was set for test after the calibration.
- 2. Equipment listed above that has a calibration due date during the testing period, the testing is completed before equipment expiration date.

| RF Switching System                    | FBSR-03A<br>(3dB ATT+LNA)              | T&M SYSTEM                | S3L4        | 11/17/2024            | Annual                  |
| Power Amplifier                        | CBL18265035                            | CERNEX                    | 22966       | 11/17/2024            | Annual                  |
| Power Amplifier                        | CBL26405040                            | CERNEX                    | 25956       | 03/02/2024            | Annual                  |
| Bluetooth Tester                       | TC-3000C                               | TESCOM                    | 3000C000175 | 03/28/2024            | Annual                  |
| Spectrum Analyzer                      | FSVA40<br>(10 Hz ~ 40 GHz)             | Rohde & Schwarz           | 101502      | 03/17/2024            | Annual                  |
| Spectrum Analyzer                      | FSV40<br>(10 Hz ~ 40 GHz)              | Rohde & Schwarz           | 100900      | 12/06/2024            | Annual                  |

#### Note:

- 1. Equipment listed above that calibrated during the testing period was set for test after the calibration.
- 2. Equipment listed above that has a calibration due date during the testing period, the testing is completed before equipment expiration date.
- 3. Especially, all antenna for measurement is calibrated in accordance with the requirements of C63.5(Version : 2017).
