

American Telecommunications Certification Body Inc.  
6731 Whittier Ave, McLean, VA 22101

October 13, 2005

RE: Asmobile Communication Inc.

FCC ID: SNFCAS

I have a few comments on the above referenced Application.

- 1) Kindly provide information (i.e. labeled photographs) to show the location of the BT and GSM circuits as well as the location of antennas for each transmitter. If necessary, please provide photographs showing antenna placement.
- 2) It appears that internal photographs underneath one of the shields was not provided (page 6). Please provide.
- 3) Given the nature of the device (portable), was the Bluetooth transmitter checked in 3 positions in effort to obtain worse case positioning?
- 4) Please explain if data and voice modes may operate at the same time. If so, then head evaluation at 0.5 crest factor is necessary.
- 5) The statement of compliance section of the SAR report appears to be missing. Please correct.
- 6) More than 1 hotspot appear on page 44 of the SAR report, but it does not appear to provide information regarding the second hot spot. Please review.
- 7) FCC requires worse case SAR positioning to be tested with Bluetooth turned on and off. This information has not been provided.
- 8) FYI...Please report tuning range on the 731 form for future applications (not band of operation).
- 9) FYI...The manual appears to be missing the required information for DoC's according to 2.1077 of the rules. Please ensure the manufacturer inserts this information.
