

**SPORTON LAB**

Response For FCC Application  
2005/10/17

RE: Asmobile Communication Inc.

FCC ID: SNFCAS

1. Updated
2. Updated
3. Yes, the data in the report is the worst position.
4. No, voice and data modes can not operate at the same time.
5. SAR report has been updated to include the statement of compliance.
6. The default setting of DASY4 is to omit the second hot spot if the SAR is below 0.5 W//kg. However, we compare the 2-D SAR of the these 2 hot spots and find the SAR for 2<sup>nd</sup> hot spot is around 0.18 W/kg.
7. We re-verified the BT on and off mode on this worst body-worn position and found their value is quite close. Please find the final results in the updated SAR report.

.

Sincerely Yours

Daniel Lee

EMC/SAR Director
