## **Overall Assessment Letter for the Toshiba GSM/UMTS/HSDPA mobile phone**

**FCC id: SP2-SG4-E01**

I have assessed the above referenced submission for the SG4-E01 and found it to be compliant.

The product is a Quad-Band GSM/UMTS/HSDPA mobile phone which supports the 1900 MHz frequency.

The following points were noted and resolved during the evaluation:-

### **1. Bluetooth Transmitter**

The original application referred to a Bluetooth transmitter however the supporting documentation had no information concerning the Bluetooth FHSS in accordance with Public Notice DA 00-705. The applicant subsequently confirmed that the Bluetooth feature was not provided in this product.

### **2. SAR report**

There were no results in the SAR report with the headset connected. A further report was provided which included the nominated accessory.

### 3. External Photos

The External photographs did not show all views of the product. A further set of photos was provided to show the controls on the narrow sides.

### 4. Agent's letter

The original agent's authorisation letter did not nominate an individual in the TMC laboratory with whom correspondence could be maintained. A revised letter was provided.

### 5. The original letters of confidentiality were addressed "To whom it may Concern" and were not addressed to FCC or BABT. This was corrected with the submission of replacement letters.

### 6. General

The product was tested for both Head and Body SAR.

The highest reported Head SAR for the product was 0.545 W/kg.

The highest reported Body SAR for the product with 1.5 cm separation was 0.657 W/kg.

I have reviewed the SAR using the FCC supplied Checklist.

I underwent the FCC SAR evaluation training at BABT in May 2006 and July 2007.

Yours sincerely
