1 General Information

1.1 Notes

The results of this test report relate exclusively to the item tested as specified in chapter "Description of test item" and are not transferable to any other test items.

Eurofins Product Service GmbH is not responsible for any generalisations and conclusions drawn from this report. Any modification of the test item can lead to invalidity of test results and this test report may therefore be not applicable to the modified test item.

The test report may only be reproduced or published in full. Reproducing or publishing extracts of the report requires the prior written approval of the Eurofins Product Service GmbH.

This document is subject to the General Terms and Conditions and the Testing and Certification System of Eurofins Product Service GmbH, available on request or accessible at www.pt.eurofins.com

1.9 Additional information

None

2 Exposure Assessment

2.1 Device Types

Fixed

A fixed device is defined as a device physically secured at one fixed location and cannot be easily re-located.

Mobile

A mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons. (47 CFR 2.1091)

Portable

A portable device is defined as a transmitting device designed to be used so that the radiating structure(s) of the device is/are within 20 centimeters of the body of the user. (47 CFR 2.1093)

2.2 Exposure Categories

Occupational / Controlled Exposure

In general, occupational/controlled exposure limits are applicable to situations in which persons are exposed as a consequence of their employment, who have been made fully aware of the potential for exposure and can exercise control over their exposure. This exposure category is also applicable when the exposure is of a transient nature due to incidental passage through a location where the exposure levels may be higher than the general population/uncontrolled limits, but the exposed person is fully aware of the potential for exposure and can exercise control over his or her exposure by leaving the area or by some other appropriate means. Awareness of the potential for RF exposure in a workplace or similar environment can be provided through specific training as part of a RF safety program. If appropriate, warning signs and labels can also be used to establish such awareness by providing prominent information on the risk of potential exposure and instructions on methods to minimize such exposure risks.

General Public / Uncontrolled Exposure

The general population/uncontrolled exposure limits are applicable to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Members of the general public would come under this category when exposure is not employment-related; for example, in the case of a wireless transmitter that exposes persons in its vicinity. Warning labels placed on low-power consumer devices such as cellular telephones are not considered sufficient to allow the device to be considered under the occupational/controlled category, and the general population/uncontrolled exposure limits apply to these devices.

2.3 MPE Limits

| IC Limits for maximum permissible exposure (MPE) | | | | |
|---|-------------------------------|------------------------------------|-----------------------------------|----------------------|
| Frequency range [MHz] | Electric field strength [V/m] | Magnetic field strength [A/m] | Power density [W/m ²] | Averaging time [min] |
| Limits for Occupational / Controlled Exposure | | | | |
| 0.003 – 1.0 | 600 | 4.9 | | 6 |
| 1 – 10 | 600/f | 4.9/f | | 6 |
| 10 – 30 | 60 | 4.9/f | | 6 |
| 30 – 300 | 60 | 0.163 | 10.0* | 6 |
| 300 – 1500 | $3.54 \cdot f^{0.5}$ | $0.0094 \cdot f^{0.5}$ | f/30 | 6 |
| 1500 – 15000 | 137 | 0.364 | 50 | 6 |
| 15000 – 150000 | 137 | 0.364 | 50 | $616000/f^{0.5}$ |
| 150000 – 300000 | $0.354 \cdot f^{0.5}$ | $9.4 \cdot 10^{-4} \cdot f^{0.5}$ | $3.33 \cdot 10^{-4} \cdot f$ | $616000/f^{0.5}$ |
| Limits for General Population / Uncontrolled Exposure | | | | |
| 0.003 – 1.0 | 280 | 2.19 | | 6 |
| 1 – 10 | 280/f | 2.19/f | | 6 |
| 10 – 30 | 28 | 2.19/f | | 6 |
| 30 – 300 | 28 | 0.073 | 2.0* | 6 |
| 300 – 1500 | $1.585 \cdot f^{0.5}$ | $0.0042 \cdot f^{0.5}$ | f/150 | 6 |
| 1500 – 15000 | 61.4 | 0.163 | 10 | 6 |
| 15000 – 150000 | 61.4 | 0.163 | 10 | $616000/f^{0.5}$ |
| 150000 – 300000 | $0.158 \cdot f^{0.5}$ | $4.21 \cdot 10^{-4} \cdot f^{0.5}$ | $6.67 \cdot 10^{-5} \cdot f$ | $616000/f^{0.5}$ |

* = Plane-wave equivalent power density

f in MHz

47 CFR 1.1310

Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.

General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.

*Figure 1. FCC Limits for Maximum Permissible Exposure (MPE)
Plane-wave Equivalent Power Density*

2.4 Transmission modes

| UPCS | |
|--------------------------------|--|
| TX frequency range | 2400 - 2483.5 |
| Channels | 13 (20MHz) / 9 (40MHz) |
| Transmission modes | 20MHz - DSSS, 20MHz – OFDM, 20MHz – HT20, 40MHz – HT40 |
| Modulation | BPSK, QPSK, 16-QAM, 64-QAM |
| Maximum duty cycle used | 100% |
| Radiated power | 20.7 (20MHz - DSSS), 24.6 (20MHz – OFDM) 24.6 (20MHz – HT20), 24.5 (40MHz – HT40) |
| Antenna type | External dedicated rubber band antenna |
| Antenna gain | 1.7dBi |
| Antenna diameter | 10cm |

2.5 Exposure assessment

| IEEE 802.11b | | |
|---------------------------------------|--|-----------|
| Transmission mode | | |
| Exposure Category | General Public | |
| TX frequency range [MHz] | 2412-2462MHz | |
| Assessment frequency | 2462.00MHz | |
| Duty cycle | 100.0% | |
| Conducted power | 20.70dBm | |
| Radiated power | 22.40dBm | |
| Antenna gain | 1.70dBi | |
| Antenna diameter | 10.00cm | |
| Far-field distance | | |
| Wavelength | 0.122m | 12.19cm |
| Antenna far-field distance | 0.164m | 16.41cm |
| Power Evaluation | | |
| Conducted power | 117.49mW | 20.70dBm |
| Antenna gain | 1.48 | 1.70dBi |
| Calculated radiated power | 173.78mW | 22.40dBm |
| Measured radiated power | 173.78mW | 22.40dBm |
| Source averaged power | | |
| Duty cycle | 100.0% | |
| Duty cycle correction | 1 | 0.00dB |
| Maximum radiated power | 173.78mW | 22.40dBm |
| Averaged radiated power | 173.78mW | 22.40dBm |
| Power density | | |
| Compliance power density limit | 1.000mW/cm² | 10.00W/m² |
| Power density @ far-field distance | 0.051mW/cm² | 0.513W/m² |
| Power density @ 20cm | 0.035mW/cm² | 0.346W/m² |
| Distance for compliance power density | 0.037m | 3.72cm |
| Verdict | The power density of the EUT at 20cm is below the FCC/IC MPE limit | |

| IEEE 802.11g | | |
|---------------------------------------|--|-----------------------|
| Transmission mode | | |
| Exposure Category | General Public | |
| TX frequency range [MHz] | 2412-2462MHz | |
| Assessment frequency | 2462.00MHz | |
| Duty cycle | 100.0% | |
| Conducted power | 24.60dBm | |
| Radiated power | 26.30dBm | |
| Antenna gain | 1.70dBi | |
| Antenna diameter | 10.00cm | |
| Far-field distance | | |
| Wavelength | 0.122m | 12.19cm |
| Antenna far-field distance | 0.164m | 16.41cm |
| Power Evaluation | | |
| Conducted power | 288.40mW | 24.60dBm |
| Antenna gain | 1.48 | 1.70dBi |
| Calculated radiated power | 426.58mW | 26.30dBm |
| Measured radiated power | 426.58mW | 26.30dBm |
| Source averaged power | | |
| Duty cycle | 100.0% | |
| Duty cycle correction | 1 | 0.00dB |
| Maximum radiated power | 426.58mW | 26.30dBm |
| Averaged radiated power | 426.58mW | 26.30dBm |
| Power density | | |
| Compliance power density limit | 1.000mW/cm ² | 10.00W/m ² |
| Power density @ far-field distance | 0.126mW/cm ² | 1.260W/m ² |
| Power density @ 20cm | 0.085mW/cm ² | 0.849W/m ² |
| Distance for compliance power density | 0.058m | 5.83cm |
| Verdict | The power density of the EUT at 20cm is below the FCC/IC MPE limit | |

| IEEE 802.11n (HT20) | | |
|---------------------------------------|--|-----------|
| Transmission mode | | |
| Exposure Category | General Public | |
| TX frequency range [MHz] | 2412-2462MHz | |
| Assessment frequency | 2462.00MHz | |
