

Operational Description

The transmitter of the EUT is powered by the battery or the power adapter. The antenna is PIFA antenna with I-PAX antenna connector. The other instruction, please have a look at the users manual.

DSSS Information:

Direct Sequence Spread Spectrum, the data is mixed by pseudorandom code which is an orthogonal code. The mixed data is digital modulated by BPSK and QPSK technique depends on the data rates.

The CCK coding is applied for increasing the data rate, and also the processing gain will be increased. The bit rates are 1, 2, 5.5, 11Mbps, the symbol rates are 1, 1.375Mbps, the chip rates are always 11Mbps.

So, the Chip/symbol is 11 and 8 respectively. Although is higher bit rate, the processing gain is lower than 10, but the CCK coding used in higher bit rate will provide 2.5dB coding gain.
