Mr. Tim Johnson
ATCB
RE: Nivis, LLC.
FCC ID: SQB-NIVISP9050103

After a review of the submitted information for FCC, I have a few comments on the above referenced Application.

1) Review of the power listed for the Ma-Com module shows different power levels for 800 MHz CDMA and 1900 MHz PCS. It appears that 800 MHz CDMA is 296.48 mW and 1900 MHz is 285.76 mW. Please review, recalculate and correct.

Output Power for the 800 MHz CDMA was pulled from the original test report, which was replaced by another set of data. The most recent original report data is now included in the report.

2) RF exposure has several references to GSM. Please note that CDMA is not GSM. Please correct.

Corrected both instances of GSM.

3) Is the reference to SGM48 correct in the first paragraph of the RF exposure?

No, it should and now does say CDMA. Corrected.

Please contact me with any further comments,

Sincerely,

Louis A. Feudi
Operations Manager
