Date : May 5, 2014

UNII Declaration Letter

We have	e declared below featured for	or FCC equipment authoriz	zation, Device FCC ID: SC	QG-MSD45N			
(1) DFS Device Master , Client with Radar detection capability ,							
(1)	☐ Client without radar detection capability, ☐ N/A						
(2)							
(2)		A - I I I M I -	A : - t	İ			
	Frequency Band (MHz)	Active Scanning (the device can	passive scanning (where the device is	Ad Hoc Mode capability	Access point capability	İ	
	(IVITZ)	transmit a probe	can listen only with no	Саравіііту	Саравінту	Ì	
		(beacon))	probes)			İ	
	2412 – 2462	Yes , No	Yes , No	⊠ Yes , ☐ No	☐ Yes , ☒ No	Ì	
	2422 - 2452	⊠ Yes , ☐ No	Yes, No	Yes, No	Yes, No	Ì	
	5745 - 5825	⊠ Yes , ☐ No	Yes, No	Yes, No	Yes, No	Ì	
	5765 - 5795	⊠ Yes , ☐ No	⊠ Yes , ☐ No	Yes, No	Yes, No	Ì	
	5180 – 5240	Yes, No	⊠ Yes , ☐ No	Yes, No	Yes, No	İ	
	5190 – 5230	Yes, No	Yes , No	Yes, No	Yes, No	İ	
	5260 - 5320	Yes , No	Yes , No	Yes, No	Yes, No	İ	
	5270 – 5310	☐ Yes , ☒ No	Yes , No	☐ Yes , ☒ No	☐ Yes , ☒ No	İ	
	5500 – 5700	Yes, No	⊠ Yes , ☐ No	Yes , No	☐ Yes , ⊠ No	Ì	
	5510 - 5670	Yes, No	Yes , No	Yes , No	Yes , No	İ	
						İ	
(3)	Country code selection ability - Yes , No						
	If no, pls explain how was implemented :						
(4)							
()	pls check below:						
	A master device is defined as a device operating in a mode in which it has the capability to transmit without receiving an enabling						
	signal. In this mode it is able to select a channel and initiate a network by sending enabling signals to other devices						
		client device is defined as a device operating in a mode in which the transmissions of the device are under control of the					
	master. A device in client mode is not able to initiate a network.						
(E)							
(5)	(5) For client devices that have software configuration control to operate in different modes (active scanning in some and passive						
	scanning in others) in different bands (devices with multiple equipment classes or those that operate on non-DFS frequencies) or						
	modular devices which configure the modes of operations through software, the application must provide software and operations						
	description on how the software and / or hardware is implemented to ensure that proper operations modes can not be modified by						
	end user or an installer.						
	🖾 Apply , 🗌 No Apply ,						
	(If apply , pls help to provide explanation on how it was implement (By hardware or software , and how software was controlled)						
	On DFS channels, the WLAN driver on the device operates under the control of an AP at all times, except when in ad-hoc mode, on US non-DFS channels. As						
	described in the answer to question (2), the device passively scans DFS frequencies until a master device is detected. The control of this functionality is not accessible to anyone under any conditions. Furthermore, the firmware is locked by proprietary password and cannot be changed or modified by end user.						
	accessible to different day contained by the different to locate by proprietary password and contained by the access						
	Applicant	: Laird Technologies					
	44400 Theorem Ave. / 1
