

CL-103

Mommy I'm Here
CHILD LOCATOR

BATTERY REPLACEMENT:

1. Use a screwdriver to loosen the screws on the back of the Transmitter (TX) & Receiver (RX) and then remove the battery cover.
2. Follow the marked battery polarities to install 2 CR2032 Lithium batteries (included) for the Receiver and 1 12V battery (included) for the Transmitter.
3. Replace battery covers for each component.

OPERATIONAL DESCRIPTION:

1. Turn on the Teddy Bear Receiver (RX) unit. Illumination of the RED LIGHT indicates that the RX is ready to cooperate with Transmitter (TX). Press the button on the TX. You will hear 3 beeping signals. After this, the beeping sound will stop. This indicates that the TX has successfully connected with the RX. Please note that when the TX connects to the RX, it does not mean that the transmitter transmits constantly. The signals only function as a reminder to users that the transmitter and the receiver are connected. Instead, the transmitter only transmits and performs its function to locate the receiver when users press the button on the transmitter.
2. Once the TX is connected to the RX, use the back clip to attach the RX to your child's shoes while keeping the TX on your person. To use the device and locate your child, press the button on the TX again. The receiver will continuously sound one long and three short beeps for 5 seconds to help you locate the position of your child within the effective distance (above 150 feet). Range may vary from place to place depending on the environment.
3. After turning on the RX, the LED light flashes every 20 seconds and gives out a beep sound, it is indicating the battery power is poor. At this point the batteries should be replaced.

NOTE:

1. Always turn the RX to the off position when not in use.
2. *Signal strength can be effected by radio interference and geographic location.

CAUTION:

Changes or modifications are not expressly approved by the manufacturer could void the user's authority to operate the equipment. Changes or modifications to the device

may void FCC and CE compliance. Infrequently used radio links should be tested regularly to protect against undetected interference or fault.
