Summary

 \bowtie

The device under test does:

- fulfill the general approval requirements as identified in this test report
- not fulfill the general approval requirements as identified in this test report

Attestations

This equipment has been tested in accordance with the standards identified in this test report. To the best of my knowledge and belief, these tests were performed using the measurement procedures described in this report.

All instrumentation and accessories used to test products for compliance to the indicated standards are calibrated regularly in accordance with ISO 17025: 2005 requirements.

I attest that the necessary measurements were made, under my supervision, at:

Timco Engineering Inc. 849 NW State Road 45 Newberry, Fl 32669

Remarks: Power source options for EUT:

Either 4 AA alkaline batteries (LR3), a 5V only AC adapter, or external DC power (10-34V) is available as power supply. Power is converted to 4.0V by regulator and supplied to the circuit. It is possible to use the batteries in conjunction with the AC adapter or the external DC power. When batteries are installed in the device, if the AC adapter or external DC power is connected, power supply from the batteries is disabled by Solid state Switch (QF1).

EUT Test Modes

The EUT was tested in a continuous transmit and receive mode. Control of the tuned frequency was done through engineering test software provided by the applicant. The software allowed the EUT to be tuned to the lowest, middle, and highest frequencies with and without modulation. A receive only mode was also available at the lowest, middle, and highest frequencies used in the 902-928 MHz band.
