Intentional Radiator Test Report

For the

Raveon Technologies Corporation

DART Data Modem M7UC

Tested under

The FCC Rules contained in Title 47 of the CFR, Part 90 for

Private Land Mobile Radio Services

January 13, 2016

Prepared for:

Raveon Technologies, Corp

Cert # ATL-0062-E

Engineering Statement: The measurements shown in this report were made in accordance with the procedure indicated, and the emissions from this equipment were found to be within the limits applicable. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them. It is further stated that upon the basis of the measurement made, the equipment tested is capable of operation in accordance with the requirements of Part 90 of the FCC Rules under normal use and maintenance.

EXECUTIVE SUMMARY

1. Testing Summary

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 90. All tests were conducted using measurement procedure from ANSI TIA/EIA-603-D-2010 as appropriate.

Test Name	Test Method/Standard	Result	Comments
RF Output Power	2.1046; 90.205	Pass	
Modulation Characteristics	2.1047(a)	Pass	The EUT does not transmit voice. The device transmit data signal only
Occupied Bandwidth	2.1049; 90.210	Pass	EUT Meets Mask D
Spurious Emissions at Antenna Terminals	2.1051; 90.210	Pass	
Radiated Spurious Emissions	2.1053; 90.210	Pass	
Frequency Stability over Temperature Variations	2.1055(a)(1); 90.213	Pass	
Frequency Stability over Voltage Variations	2.1055(d)	Pass	
Transient Frequency Behavior	90.214	Pass	

EQUIPMENT CONFIGURATION

1. Overview

H.B Compliance Solutions was contracted by Raveon Technologies Corporation to perform testing on the M7UC DART Data Modem under the purchase order number 7145.

This document describes the test setups, test methods, required test equipment, and the test limit criteria used to perform compliance testing of the Raveon Technologies Corporation, M7UC DART Data Modem.

The tests were based on FCC Part 90 Rules. The tests described in this document were formal tests as described with the objective of the testing was to evaluate compliance of the Equipment Under Test (EUT) to the requirements of the aforementioned specifications. Raveon Technologies Corporation should retain a copy of this document and it should be kept on file for at least five years after the manufacturing of the EUT has been permanently discontinued. The results obtained relate only to the item(s) tested.

Product Name:	DART Data Modem
Model(s) Tested:	M7UC
FCC ID:	SRS-M7-UC
Supply Voltage Input:	Primary Power : 12 Vdc
Frequency Range:	450MHz to 470MHz
No. of Channels:	Single Channel
Necessary Bandwidth	11.25 & 20kHz
Type(s) of Modulation:	2-FSK & 4-FSK
Range of Operation Power:	5.1W
Voltage into final Transistor	12 volts
Current into final Transistor	2.5 amps
Emission Designator:	8K40F1D & 13K2F1D
Channel Spacing(s)	None
Test Item:	Pre-Production
Type of Equipment :	Fixed
Antenna:	50 ohm MMCX Connector
Environmental Test Conditions:	Temperature: 15-35°C Humidity: 30-60% Barometric Pressure: 860-1060 mbar
Modification to the EUT:	None
Evaluated By:	Staff at Artesyn Embedded & H.B. Compliance Solutions
Test Date(s):	09/02/15 till 10/26/15

2. Test Facility

Radiated Emission testing was performed at Artesyn Embedded Technologies. This facility is located at 2900 S. Diablo Way, Suite 190, Tempe, AZ 85282. All equipment used in making physical determination is accurate and bears recent traceability to the National Institute of Standards and Technology.

Test facility at Artesyn Embedded Technologies is an A2LA accredited test site. The A2LA certificate number is 2716.01. The scope of accreditation covers the FCC Method - 47 CFR Part 15, ICES-003, CISPR 22, AS/NZS 3548 and VCCI

Conducted testing was performed at H.B. Compliance Solutions. This facility is located at 5005 S. Ash Avenue, Suite # A-10, Tempe AZ 85282.

Radiated Emissions measurements were performed in a semi-anechoic chamber (equivalent to an Open Area Test Site). In accordance with §2.948(a)(3), a complete site description is contained at Emerson Network Power.

3. Description of Test Sample

The Raveon Technologies, RV-M7UC Data radio modem, is a high-speed narrow-band data communications device. The components are contained in a metal enclosure. It runs off 12 Vdc via a 2 wire cord. This model transmit data in a in the 450 to 470MHz range.

4. Equipment Configuration

Ref. ID	Name / Description	Model Number	Serial Number
# 1	DART Data Modem	M7UC	N/A

Table 1. Equipment Configuration

5. Support Equipment

All support equipment supplied is listed in the following Support Equipment List.

Ref ID	Name / Description	Manufacturer	Model #	Serial #
#2	DC Power Supply	Lambda	LA-200	LA2-AA20-1433535
#3	Laptop	Dell	Inspiron 1545	17934612445

Table 2. Support Equipment

6. Ports and Cabling Information

Ref ID	Port name on the EUT	Cable Description	Qty.	Length (m)	Shielded? (Y/N)	Termination Box ID & Port ID
#4	Power	2 wire	1	2	N	DC Power Supply

Table 3. Ports and Cabling Information

7. Method of Monitoring EUT Operation

A test receiver will be used to monitor the data transmission from the EUT.

8. Mode of Operation

The EUT will be configured to transmit at maximum power level. Test mode was provided to select the lower, middle and upper band of the transmitter by customer provided software. This software programmed the transmitter from three frequencies modulated and the other three in CW mode. These settings were created for testing purpose only.

9. Modifications

9.1 Modifications to EUT

No modifications were made to the EUT

9.2 Modifications to Test Standard

No Modifications were made to the test standard.

10. Disposition of EUT

The test sample including all support equipment submitted to H.B Compliance Solutions for testing will be returned to Raveon Technologies Corporation upon completion of testing & certification

Criteria for Intentional Radiators

1. RF Power Output

Test Requirement(s):	§2.1046 and §90.215	Test Engineer(s):	Keith T.
Test Results:	Pass	Test Date(s):	09/02/2015

Test Procedures: As required by 47 CFR 2.1046, RF Power output measurements were made at the RF output terminals of the EUT.

Customer provided a test mode internal to the EUT to control the RF modulation, and frequency channel. The EUT was connected through an attenuator to a Spectrum Analyzer capable of making power measurements. Measurements were made at the low, mid, and high channels of the entire frequency band.

Frequency (MHz)	Conducted Power (dBm)	Conducted Power (W)
450.0	37.0	5.0
460.0	37.1	5.1
469.98	37.09	5.1

Table 4. RF Power Output, Test Results

Plot 2 – Output Power – Mid

Plot 3 – Output Power – High

2. Modulation Characteristics

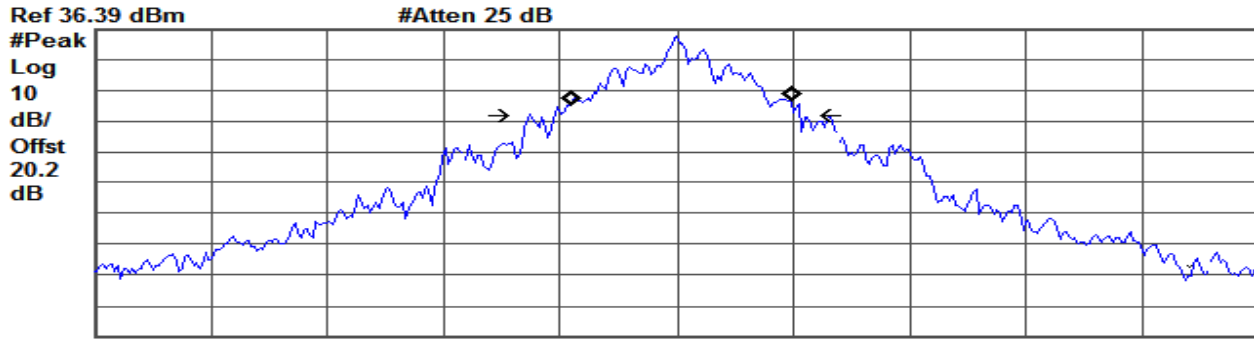

Test Requirement(s):	2.1047 and §90.207	Test Engineer(s):	Keith T.
Test Results:	Pass	Test Date(s):	10/26/2015

Test Procedure: As required by 47 CFR 2.1047, Modulation characteristics measurements were made at the RF output terminals of the EUT.

Customer provided a test mode internal to the EUT to control the RF modulation, and frequency channel. The EUT was connected through an attenuator to a Spectrum Analyzer.

As per standard a curve or equivalent data of the EUT is shown

The plot(s) of the modulation characteristic is presented hereinafter as reference.

3. Occupied Bandwidth (Emission Mask)

Test Requirement(s):	2.1049 and §90.210 with FCC (Emission Mask D)	Test Engineer(s):	Keith T.
Test Results:	Pass	Test Date(s):	10/01/2015

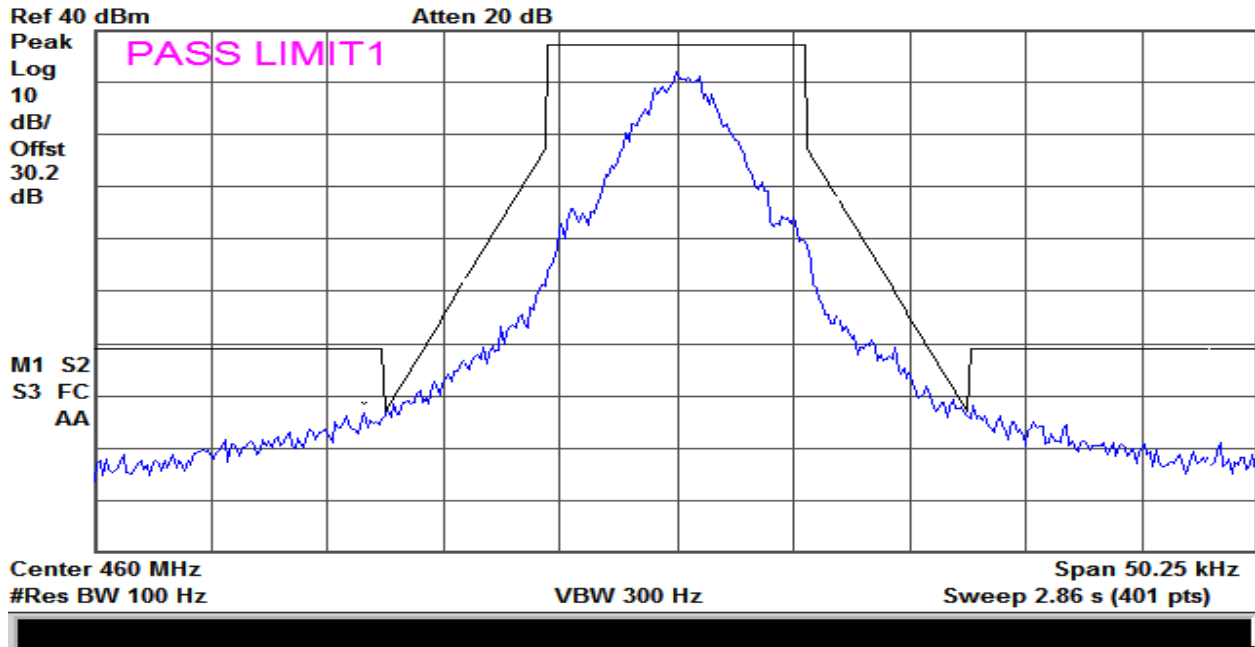

Test Procedure: As required by 47 CFR 2.1049, occupied bandwidth measurements were made at the output terminals of the EUT.

Customer provided a test mode internal to the EUT to control the RF modulation, and frequency channel. The EUT was connected through an attenuator to a Spectrum Analyzer. The measured highest peak power was set relative to zero dB reference. The RBW of the Spectrum Analyzer was set to at least 1% of the channel bandwidth. Measurements were carried out at the low, mid and high channels of the TX band.

The following pages show measurements of Emission Mask plots:

4. Spurious Emissions at Antenna Terminals

Test Requirement(s):	§2.1051 and 90.210(m)	Test Engineer(s):	Keith T.
Test Results:	Pass	Test Date(s):	10/01/2015

Test Procedures:

As required by 47 CFR 2.1051, spurious emissions at antenna terminal measurements were made at the RF output antenna terminal of the EUT.

Customer provided a test mode internal to the EUT to control the RF modulation, and frequency channel. The EUT was connected through an attenuator to a Spectrum Analyzer. The Spectrum Analyzer was set to sweep from 30MHz up to 10th harmonic of the fundamental or 40GHz whichever is the lesser. Measurements were made at the low, mid and high frequency of the transmit band.

5. Radiated Spurious Emissions

Test Requirement(s):	§2.1053 and 90.210(j)	Test Engineer(s):	Keith T.
Test Results:	Pass	Test Date(s):	10/21/2015

Test Procedures: As required by 47 CFR 2.1053, field strength of radiated spurious measurements were made in accordance with the procedures of the TIA/EIA-603-D-2010.

The EUT was placed on a wooden table inside a 3 meter semi-anechoic chamber. The EUT was transmitting into a non-radiating load which was directly connected to the EUT antenna port.

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The test was performed by placing the EUT on 3 orthogonal axis. The frequency range up to the 10th harmonic was investigated.

The EUT is removed and replaced with a substitution antenna. A signal generator was connected to the substitution antenna by a non-radiating cable. The absolute levels of the spurious emissions were measured by the substitution.

Spurious emissions in dB = $10 \log (T_{pwr} \text{ in Watts}/0.001)$ -the absolute level

Spurious attenuation limit in dB = $50 + 10 \log_{10} (P)$ dB or 70dB whichever is the lesser attenuation

6. Frequency Stability vs Temperature

Test Requirement(s):	§2.1055 and 90.213	Test Engineer(s):	Jerry Mejak
Test Results:	Pass	Test Date(s):	10/14/2015

Test Procedures: As required by 47 CFR 2.0155, Frequency Stability measurements were made at the RF antenna output terminals of the EUT.

The EUT was placed in an Environmental Chamber with all the support equipment outside the chamber. The EUT was set to transmit a modulated carrier. The reference frequency at 20°C was observed and noted down. The frequency drift was investigated for every 10°C increment until the unit was stabilized then recorded the reading in tabular format with the temperature range of -30°C to 50°C.

Temperature centigrade	Measured Frequency (MHz)	Upper Margin (MHz)	Lower Margin (MHz)
-30	460.00025	-0.00435	0.00485
-20	460.00033	-0.00427	0.00493
-10	460.00025	-0.00435	0.00485
0	460.00033	-0.00427	0.00493
10	460.00042	-0.00418	0.00502
20	460.00050	-0.00410	0.00510
30	460.00042	-0.00418	0.00502
40	460.00042	-0.00418	0.00502
50	460.00044	-0.00377	0.00543

Table 8 – Temperature vs Frequency Test Result

Plot 18 – Temperature vs Frequency

7. Frequency Stability vs Voltage

Test Requirement(s):	§2.1055	Test Engineer(s):	Jerry Mejak
Test Results:	Pass	Test Date(s):	10/14/2015

Test Procedures: As required by 47 CFR 2.0155, Frequency Stability measurements were made at the RF antenna output terminals of the EUT.

The EUT was connected to a variable DC source. The frequency was measured at both the nominal 12 Vdc of the EUT and at the extreme lower and upper voltages.

With the voltage set to a measurement point, the transmitted signal was captured by the spectrum analyzer and the frequency value determined. The frequencies are compared to the tuned frequency. All data for these measurements are found in the table 9.

Reference Frequency: 460.0MHz at 12VdC at 20°C

Input Voltage (Vdc)	Measured Frequency (MHz)	Upper Margin (MHz)	Lower Margin (MHz)
9.50	459.99996	-0.00464	0.00456
12.00	459.99992	-0.00468	0.00452
16.00	459.99967	-0.00493	0.00427

Table 9. Temperature vs. Voltage Test Result

Plot 19 – Temperature vs Voltage

8. Transient Frequency Behavior

Test Requirement(s):	§90.214	Test Engineer(s):	Keith T.
Test Results:	Pass	Test Date(s):	10/01/15

Test Procedures: The EUT was tested for transient frequency behavior using the test method of TIA/EIA 603.

RF Frequency	Channel Bandwidth	Transient Period	Transient Behavior	Result
450MHz	12.5KHz	t1= 10ms	<±12.5kHz	Pass
		t2= 25ms	<±6.25kHz	Pass
		t3= 10ms	<±12.5kHz	Pass

Table 7. Transient Frequency – Test Requirement

The following pages show measurements of Transient Frequency Behavior plots:

TDS 3052 - 2:34:47 PM 10/1/2015

Plot 20 – On Time

TDS 3052 - 2:44:50 PM 10/1/2015

Plot 21 – Off Time

9. Necessary Bandwidth

Referencing Part 2.202 of the FCC Rules and Regulation and using the following formula for calculating the Necessary Bandwidth

$$B = 2M + 2DK$$

Where M = Baud Rate, D = Deviation and K= Constant

Digital Data: 2 level FSK; 4800 bps; Narrow Band; 12.5 KHz Channel Spacing

Calculation

Data Rate in bps (R) = 4800

Peak Deviation of Carrier (D) = +/-1.8KHz

Number of States in Each Symbol = 2

$$B_n = 3.86 + 0.27R$$

$$B_N = [3.86*(1800) + 0.27*4800]=8.24 \text{ KHz}$$

Emission Designator: 8K20F1D

Digital Data: 2 level FSK; 9600 bps; Wide Band; 12.5 KHz Channel Spacing

Calculation

Data Rate in bps (R) = 9600

Peak Deviation of Carrier (D) = +/-1.8KHz

Number of States in Each Symbol = 2

$$B_n = 3.86 + 0.27R$$

$$B_N = [3.86*(1800) + 0.27*9600] = 9.54 \text{ KHz}$$

Emission Designator: 9K50F1D
