TRIAL

Aircraft

The DJI™ MAVIC™ 3E/3T features upward, downward, and horizontal omnidirectional Vision Systems and Infrared Sensing System*, allowing for hovering and flying indoors as well as outdoors and for automatic Return to Home while avoiding obstacles in all directions. With precise three-axis gimbal to stabilize high-performance multi-camera load, the DJI Pilot 2 app can be used to observe the real-time view from the cameras and take photos and videos. The built-in DJI AirSense detects nearby aircraft in the surrounding airspace to ensure safety and beacon help to identify the aircraft during flight. With a PSDK port so the aircraft can be equipped with designated accessories to adapt to different application scenarios such as security, patrol inspection, and mapping.

Remote Controller

The DJI RC Pro Enterprise remote controller features O3 Enterprise, the latest version of DJI's signature OCUSYNC™ image transmission technology, and can transmit a live HD view from the camera of an aircraft at a distance of up to 15 km*. The remote controller comes with a wide range of aircraft and gimbal controls as well as customizable buttons. The built-in microphone allows recording voice and 5.5-in high brightness 1000 cd/m² screen boasts a resolution of 1920×1080 pixels. Users can connect to the internet via Wi-Fi and the Android operating system comes with a variety of functions such as Bluetooth and GNSS.

* The remote controller is able to reach its maximum transmission distance (FCC) in a wide-open area with no electromagnetic interference at an altitude of about 400 ft (120 m).

1. Watching the Tutorials

Scan the QR code or visit www.dji.com/mavic-3-enterprise to watch the tutorial videos.

2. Charging the Battery

Charge to activate the Intelligent Flight Battery and the internal battery of the Remote Controller before using for the first time.

Check battery level: press once.

Power on/off: press, then press and hold.

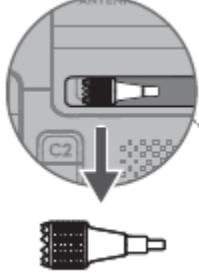

3. Preparing the Aircraft

 Unfold the front arms before the rear ones. All arms and propellers must be unfolded before takeoff.

4. Preparing the Remote Controller

		
Remove the control sticks from the storage slots	Attach the control sticks and twist to secure	Unfold the antennas

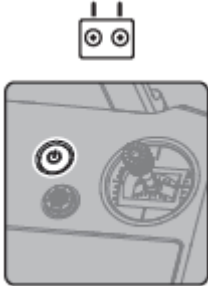

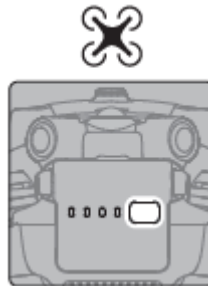

The optimal transmission range is where the antennas are facing toward the aircraft and the angle between the antennas and the back of the remote controller is 180° or 270°.

 • DO NOT operate other wireless devices at the same frequency as the remote controller, to avoid signal interference.

• A warning prompt appears in DJI Pilot 2 if the transmission signal is weak. Adjust the antennas to make sure that the aircraft is within the optimal transmission range.

5. Getting Ready for Takeoff

		
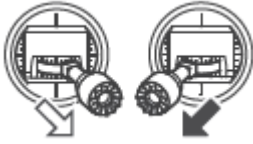

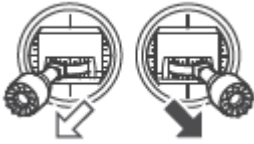

Power on the remote controller	Power on the aircraft	Launch DJI Pilot 2

 Use a DJI account to activate the aircraft and the remote controller. Activation requires an internet connection. Before activating the aircraft in DJI Pilot 2, power on the remote

controller and follow the prompts to activate.

6. Flight
