

Operational description

The WM-B-AG-02 wireless module allows devices running the Microsoft® Pocket PC operating system to connect to a Wi-Fi IEEE 802.11b WLAN or communicate directly with other devices connected to a WLAN.

This product is a 802.11b 11 Mbps wireless network adapter that provides CF+ host interface with 22* 29 *3.5 mm mechanical design. The WM-B-AG-02 is designed to meet the mobility, performance, security, interoperability, management, and reliability requirements of the IEEE 802.11b high data rate standard. The Wireless LAN SIP module provides PDA or handheld PC users highly mobility from cell-to-cell roaming. With a CF-to PCMAIA adapter, users can easily implement this WLAN device under most \Windows platforms.

The product contains one antenna connector that provides RF connection which support cost effective antenna solution.

In addition to WEP, WPA and TKIP are supported to provide the security on your network.
