0 Summary

0.1 Technical Report Summary

Type of Authorization

Certification for a GSM cellular radiotelephone device

Applicable FCC Rules

Prepared in accordance with the requirements of FCC Rules and Regulations as listed in 47 CFR Ch.1 Parts 0 to 19 and Parts 20 to 69 (10-1-06 Edition). The following subparts are applicable to the results in this test report.

Part 2

Subpart J - Equipment Authorization Procedures, Certification

§ 2.1046 Measurement required: RF power output

§ 2.1049 Measurement required: Occupied bandwidth

§ 2.1051 Measurement required: Spurious emissions at antenna terminals

§ 2.1053 Measurement required: Field strength of spurious radiation

§ 2.1055 Measurement required: Frequency stability

§ 2.1057 Frequency spectrum to be investigated

Part 22

Subpart C – Operational and Technical Requirements

§ 22.355 Frequency tolerance

Subpart H – Cellular Radiotelephone Service

§ 22.913 Effective radiated power limits

§ 22.917 Emission limitations for cellular equipment

Test Summary

The EUT complied with all performed tests as listed in chapter 0.2 Measurement Summary.

In order to demonstrate that the maximum output power of the new variant is within ± 0.5 dB of the original module, a delta measurement between the two modules was performed. The results are listed in the annex of this report.

0.2 Measurement Summary

Field strength of spurious radiation

The measurement was performed according to FCC §2.1053 10-1-06

OP-Mode	Setup	Port	Final Result
op-mode 1	Setup_a02	Enclosure	N/P
op-mode 2	Setup_a02	Enclosure	passed
op-mode 3	Setup_a02	Enclosure	N/P
op-mode 4	Setup_a02	Enclosure	N/P
op-mode 5	Setup_a02	Enclosure	N/P
op-mode 6	Setup_a02	Enclosure	N/P
op-mode 7	Setup_a02	Enclosure	N/P
op-mode 8	Setup_a02	Enclosure	N/P
op-mode 9	Setup_a02	Enclosure	N/P

N/P: Not Performed.

- The test was performed in the operating mode with the highest output power based on the output power comparison measurement.

1 Administrative Data

1.1 Testing Laboratory

Company Name: 7 Layers AG
Address: Borsigstr. 11
40880 Ratingen
Germany

This facility has been fully described in a report submitted to the FCC and accepted under the registration number 96716 .

The test facility is also accredited by the following accreditation organisation:
- Deutscher Akkreditierungs Rat DAR-Registration no. DAT-P-192/99-01

Responsible for Accreditation Scope: Dipl.-Ing. Bernhard Retka
Dipl.-Ing. Robert Machulec
Dipl.-Ing. Thomas Hoell

Report Template Version: 2007-08-29

1.2 Project Data

Responsible for testing and report: Dipl.-Ing. Arndt Stoecker
Receipt of EUT: 2007-11-27
Date of Test(s): 2007-12-04 to 2007-12-05
Date of Report: 2007-12-13

1.3 Applicant Data

Company Name: Siemens AG
Address: Siemensdamm 50
13629 Berlin
Germany
Contact Person: Mr. Halawi

1.4 Manufacturer Data

Company Name: please see applicant data

2 Testobject Data

2.1 General EUT Description

Equipment under Test:	GSM/UMTS module
Type Designation:	Siemens Cellular Engine HC25
Kind of Device:	GSM 850/900/1800/1900/FDDII/FDDV
(optional)	
Voltage Type:	DC
Nominal Voltage:	4.2 V
Maximum Voltage:	4.2 V
Minimum Voltage:	3.5 V

General product description:

The Equipment Under Test (EUT) is a GSM 850/900/1800/1900 module and supports EDGE, and FDD V with HSDPA.

The manufacturer declared that nominal voltage is equal to high voltage.

In GSM 850 mode the EUT operates in channel blocks A and B from 824.2 MHz (lowest channel = 128) to 848.8 MHz (highest channel = 251).

In FDD V mode the EUT operates in channel blocks A and B from 826.4 MHz (lowest channel = 4132) to 846.6 MHz (highest channel = 4233).

The EUT provides the following ports:

Ports

- antenna connector
- enclosure
- System port

The main components of the EUT are listed and described in Chapter 2.2

2.2 EUT Main components

Type, S/N, Short Descriptions etc. used in this Test Report

Short Description	Equipment under Test	Type Designation	Serial No.	HW Status	SW Status	Date of Receipt
EUT A (Code: 10900EF27)	GSM/UMTS module	Siemens Cellular Engine	010009	rev. 01.760 (SV 07)	B2.11	2007-11-27
Remark: EUT A is equipped with a permanent antenna connector.						
EUT B (Code: 10900ED27)	GSM/UMTS module	Siemens Cellular Engine	015077	rev. 01.760 (SV 07)	B2.11	-
Remark: EUT B is equipped with a permanent antenna connector.						

NOTE: The short description is used to simplify the identification of the EUT in this test report.

2.3 Ancillary Equipment

For the purposes of this test report, ancillary equipment is defined as equipment which is used in conjunction with the EUT to provide operational and control features to the EUT. It is necessary to configure the system in a typical fashion, as a customer would normally use it. But nevertheless Ancillary Equipment can influence the test results.

Short Description	Equipment under Test	Type Designation	HW Status	SW Status	Serial no.	FCC ID
AE_1	External antenna Algon MiniMag	Dualband antenna Ordering number 1140.26	-	-	-	--
Remark: the antenna gain is declared by the applicant as: 1.65 dBi = -0.49dBD						
AE_2	Development board DSB3	DSB75	DSB75_B1.1	-	DBI_ICM-100012-03	-
AE_3	Adapter board	Quinn DSB75 Adapter A1	-	-	Q_DSB75_A1_334	-
AE_4	Housing for DSB75	-	-	-	DSB75_B10009	-
AE_5	Flexcable 1	-	-	-	-	--

2.4 EUT Setups

This chapter describes the combination of EUT's and ancillary equipment used for testing.

Setup No.	Combination of EUTs	Description
setup_a01	EUT A + AE_1 + AE_2 + AE_3 + AE_5	setup for conducted tests
setup_a02	EUT B + AE_1 + AE_2 + AE_3 + AE_4 + AE_5	setup for radiated spurious emissions tests

2.5 Operating Modes

This chapter describes the operating modes of the EUT's.

Op. Mode	Description of Operating Modes	Remarks
PCS voice call		
op-mode 1	Call established on Traffic Channel (TCH) 128, Carrier Frequency 824.2 MHz	128 is the lowest channel PCS data call
op-mode 2	Call established on Traffic Channel (TCH) 190, Carrier Frequency 836.6 MHz. Additionally the GPS receiver is active.	190 is a mid channel PCS data call
op-mode 3	Call established on Traffic Channel (TCH) 251, Carrier Frequency 848.8 MHz	251 is the highest channel PCS data call
EDGE data call		
op-mode 4	Call established on Traffic Channel (TCH) 128, Carrier Frequency 824.2 MHz	128 is the lowest channel EDGE data call
op-mode 5	Call established on Traffic Channel (TCH) 190, Carrier Frequency 836.6 MHz	190 is a mid channel EDGE data call
op-mode 6	Call established on Traffic Channel (TCH) 251, Carrier Frequency 848.8 MHz	251 is the highest channel EDGE data call
FDD V data call		
op-mode 7	Call established on Traffic Channel (TCH) 4132, Carrier Frequency 826.4 MHz	4132 is the lowest channel FDD V data call
op-mode 8	Call established on Traffic Channel (TCH) 4183, Carrier Frequency 836.6 MHz	4183 is a mid channel FDD V data call
op-mode 9	Call established on Traffic Channel (TCH) 4233, Carrier Frequency 846.6 MHz	4233 is the highest channel FDD V data call

3 Test Results

3.1 Field strength of spurious radiation

Standard FCC Part 22, 10-1-06
Subpart H

The test was performed according to: FCC §2.1053, 10-1-06

3.1.1 Test Description

1) The EUT was placed inside an anechoic chamber. Refer to chapter "Setup Drawings". The EUT was coupled to the R&S CMU200 Digital Communication Tester which was located outside the chamber via coaxial cable.

2) A call was established on a Traffic Channel (TCH) between the EUT and the base station simulator (R&S CMU200 Digital Communication Tester).

Important Settings:

- Discontinuous Transmission: OFF
- Modulation Signal: PSR16-1 (Pseudo Random Sequence)
- Output Power: Maximum
- Channel : Varied during measurements

3) A pre-calibration procedure is used so that the readings from the spectrum analyser are corrected and represent directly the equivalent radiated power (related to a $\lambda/2$ dipole).

4) All spurious radiation measurements were made with spectrum analyser and the appropriate calibrated antennas for the frequency range of 30 MHz to 10 GHz (up to the 10th harmonic of the transmit frequency).

5) Important Analyser Settings

- [Resolution Bandwidth / Video Bandwidth]:

a) [3 kHz / 10 kHz] in the Span of 1 MHz directly below and above the GSM-Band,

b) [10 kHz / 30 kHz] in case the curve of the analyser IF-Filter leads to an exceeding of the limit, in this case a worst case correction factor of 20 dB (1 MHz -> 10 kHz) was used

c) [1 MHz / 3 MHz] otherwise

- Sweep Time: Calculated by using a formula given in the Product Standard "GSM 11.10-1 edition 4" for spurious emissions measurements (depending on the transmitting signal, the span and the resolution bandwidth)

6) The spurious emissions (peak) were measured in both vertical and horizontal antenna polarisation during the call is established on the lowest channel, mid channel and on the highest channel.

3.1.2 Test Requirements / Limits

§ 2.1053 Measurements required: Field strength of spurious radiation.

Measurements shall be made to detect spurious emissions that may be radiated directly from the cabinet, control circuits, power leads, or intermediate circuit elements under normal conditions of installation and operation. Curves or equivalent data shall be supplied showing the magnitude of each harmonic and other spurious emission. For this

test, single sideband, independent sideband, and controlled carrier transmitters shall be modulated under the conditions specified in paragraph (c) of Sec. 2.1049, as appropriate. For equipment operating on frequencies below 890 MHz, an open field test is normally required, with the measuring instrument antenna located in the far-field at all test frequencies. In the event it is either impractical or impossible to make open field measurements (e.g. a broadcast transmitter installed in a building) measurements will be accepted of the equipment as installed. Such measurements must be accompanied by a description of the site where the measurements were made showing the location of any possible source of reflections which might distort the field strength measurements. Information submitted shall include the relative radiated power of each spurious emission with reference to the rated power output of the transmitter, assuming all emissions are radiated from halfwave dipole antennas.

(b) The measurements specified in paragraph (a) of this section shall be made for the following equipment:

(2) All equipment operating on frequencies higher than 25 MHz.

§ 2.1057 Frequency spectrum to be investigated.

(a) In all of the measurements set forth in Secs. 2.1051 and 2.1053, the spectrum shall be investigated from the lowest radio frequency signal generated in the equipment, without going below 9 kHz, up to at least the frequency shown below:

(1) If the equipment operates below 10 GHz: to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

(b) Particular attention should be paid to harmonics and subharmonics of the carrier frequency as well as to those frequencies removed from the carrier by multiples of the oscillator frequency. Radiation at the frequencies of multiplier stages should also be checked.

(c) The amplitude of spurious emissions which are attenuated more than 20 dB below the permissible value need not be reported.

(d) Unless otherwise specified, measurements above 40 GHz shall be performed using a minimum resolution bandwidth of 1 MHz.

§ 22.917 Emission limitations for cellular equipment

(a) The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P)$ dB.

This is calculated to be -13 dBm (effective radiated power) which corresponds to 84.6 dB μ V/m (field strength) in a distance of 3 m.

(b) Compliance with these rules is based on the use of measurement instrumentation employing a resolution bandwidth of 100 kHz or greater. In the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. A narrower resolution bandwidth is permitted in all cases to improve measurement accuracy provided the measured power is integrated over the full required measurement bandwidth (*i.e.* 100 kHz or 1 percent of emission bandwidth, as specified). The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emissions are attenuated at least 26 dB below the transmitter power.

(c) Licensees in this service may establish an alternative out of band emission limit to be used at specified band edge(s) in specified geographical areas [...].

(d) If any emission from a transmitter operating in this service results in interference to users of another radio service, the FCC may require a greater attenuation of that emission than specified in this section.

3.1.3 Test Protocol

Temperature: 24°C
Air Pressure: 1007 hPa
Humidity: 39%

Op. Mode	Setup	Port
op-mode 2	setup_a02	Enclosure

Frequency MHz	Antenna Polarisation	Bandwidth kHz	Measured Level dBm	Limit dBm
2509.0	Vertical	1000	-26.2	-13.0
2509.0	Horizontal	1000	-23.3	-13.0

Remark: No (further) spurious emissions were found in the range 20 dB below the limit.

3.1.4 Test result: Field strength of spurious radiation
