#### **Supplementary Information**

The device bearing the brand name and FCC ID specified above has been shown to comply with the applicable technical standards as indicated in the measurement report and was tested in accordance with measurement procedures specified in <u>ANSI C 63.10-2009</u>.

We attest to the accuracy of data and all measurements reported herein were performed by KOSTEC Co., Ltd. and were made under Chief Engineer's supervision. We assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

## **1. GENERAL INFORMATION**

## 1.1 Test Facility

#### Test laboratory and address

KOSTEC Co., Ltd.

128(175-20, Annyeong-dong)406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea

The open area field test site and conducted measurement facility are used for these testing. This site at was fully described in a reports submitted to the Federal Communications Commission (FCC).

The details of these reports have been found to be in complies with the requirements of Section 2.948 of the FCC Rules on November 14, 2002. The facility also complies with the radiated and conducted test site criteria set forth in ANSI C 63.10-2009.

The Federal Communications Commission (FCC) has the reports on file and KOSTEC Co., Ltd. is listed under FCC Registration No.525762. The test site has been approved by the FCC for public use and is List in the FCC Public Access Link CORES (Commission Registration System)

#### **Registration information**

KCC (Korea Communications Commission) Number : KR0041 KOLAS(Korea Laboratory Accreditation Scheme) Number : 232 FCC Registration Number(FRN) : 525762 VCCI Registration Number : R-1657 / C –1763 IC Registration Site Number : 8305A-1

#### 1.2 Location

## 2. EQUIPMENT DESCRIPTION

The product specification described herein was declared by manufacturer. And refer to user's manual for the details.

| Equipment Name        | Handheld Mobile Computer  |
|-----------------------|---|
| Model No              | BM180   |
| Usage                 | Handheld Mobile Computer  |
| Serial Number         | Proto type  |
| Data connection Type  | GFSK  |
| Modulation type       | GSM: GMSK, 8PSK<br>WCDMA: QPSK<br>802.11b: DSSS (DBPSK / DQPSK / CCK)<br>802.11a/g/n: OFDM (BPSK / QPSK / 16QAM / 64QAM)<br>Bluetooth 2.1 BDR (1Mbps) : GFSK<br>Bluetooth 2.1 EDR (2Mbps) : π/4-DQPSK<br>Bluetooth 2.1 EDR (3Mbps) : 8-DPSK<br>Bluetooth 4.0 LE: GFSK<br>NFC: ASK   |
| Max peak output       | 2.17 dBm*   |
| Operated Frequency    | $ \begin{array}{llllllllllllllllllllllllllllllllllll$   |
| Channel Number        | 40 CH   |
| Operation temperature | - 20°C~ + 55 °C   |
| Power Source          | AC/DC adapter<br>Input : AC 100-240 V, 0.3 A, 50 - 60 Hz<br>Output : DC 5 V, 1.0 A<br>Battery : Li-ion DC 3.7 V   |
| Antenna Description   | Type : Internal PCB Antenna   |
| FCC ID                | SS4BM180M   |
| Remark                | <ol> <li>Regarding to the operation frequency, the lowest, middle and highest frequency<br/>are selected to perform the test.</li> <li>The radiation measurements are performed in X, Y, Z axis positioning. Only the<br/>worst case is shown in the report.</li> <li>The above DUT's information was declared by manufacturer. Please refer to the<br/>specifications or user manual for more detailed description.</li> </ol> |

\*\* it is maximum peak conducted power in only BT 4.0

## **3. SYSTEM CONFIGURATION FOR TEST**

## 3.1 Characteristics of equipment

The Equipment Under Test (EUT) contains the following capabilities: GSM850/1900, WCDMA Band II/V, WLAN 802.11abgn, Bluetooth 4.0, NFC. The test data contained in this report pertains only to the emissions due to the BT4.0 transmitter of the EUT.

#### 3.2 Used peripherals list

| Description   | Model No.            | Serial No. | Manufacture                                      | Remark        |
|---------------|----------------------|------------|--|---------------|
| Battery       | EG-520               | -          | Egen   | Li-ion 3.7 V  |
| AC/DC adapter | PSAI05R-050Q CH      | -          | Phihong (Dongguan)<br>Electronics Co.,Ltd        | For EUT       |
| Note book     | Pavilion g4          | -          | HP   |               |
| AC adapter    | AC adapter PPP012H-S |            | CHICONY POWER<br>TECHNOLOGY(SUZH<br>OU) CO., LTD | For note book |

#### **3.3 Product Modification**

N/A

#### 3.4 Operating Mode

\* All measurements were intended to emit maximum RF signal from EUT continuously.

#### 3.5 Test Setup of EUT

The measurements were taken in continuous transmit mode using the TEST MODE.

For controlling the EUT as TEST MODE using test program, test program were provided by the applicant. The test utility for BT is GRCT.

## 3.6 Parameters of Test Software Setting

During testing, Channel & Power Controlling Software provided by the customer was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product.

#### 3.7 Table for Test condition

| Test Items                            | Channel No | Frequency (MHz) |
|---------------------------------------|------------|-----------------|
|                                       | 0          | 2 402           |
| Max. Conducted peak output power      | 19         | 2 440           |
|                                       | 39         | 2 480           |
|                                       | 0          | 2 402           |
| Conducted peak power spectral density | 19         | 2 440           |
|                                       | 39         | 2 480           |
|                                       | 0          | 2 402           |
| 6 dB spectrum Bandwidth               | 19         | 2 440           |
|                                       | 39         | 2 480           |
| Pand adda of PE conducted omissions   | 0          | 2 402           |
| Band edge of RF conducted emissions   | 39         | 2 480           |
|                                       | 0          | 2 402           |
| Spurious RF conducted emissions       | 19         | 2 440           |
|                                       | 39         | 2 480           |
|                                       | 0          | 2 402           |
| Spurious radiated emissions           | 19         | 2 440           |
|                                       | 39         | 2 480           |

## 3.8 Duty Cycle Of Test signal

Duty cycle is < 98%, duty factor shall be considered. Duty cycle = Tx on/(Tx on+ Tx off), Duty factor = 10\*log(1/duty cycle)

| Mode  | Freq  | Duty cycle | Duty factor |
|-------|-------|------------|-------------|
|       | 2 402 | 0.767      | 1.150       |
| BT4.0 | 2 440 | 0.767      | 1.150       |
|       | 2 480 | 0.767      | 1.150       |

## 3.8 Used Test Equipment List

|--|-------------------|---------------------|-----------|-------------|
| Max. Conducted peak output power   | 15.247(b)(3)      | Clause 5.1          |           | Compliance  |
| Conducted peak power spectral density  | 15.247(e)         | Clause 5.2          | $\square$ | Compliance  |
| 6 dB spectrum Bandwidth  | 15.247(a)(2)      | Clause 5.3          | $\square$ | Compliance  |
| Band edge of RF conducted emissions  | 15.247(d)         | Clause 5.4          | $\square$ | Compliance  |
| Spurious RF radiated emissions   | 15.247(d), 15.209 | Clause 5.5          | $\square$ | Compliance  |
| Antenna requirement  | 15.203, 15.247    | Clause 5.6          |           | Compliance  |
| AC Power Conducted emissions   | 15.207            | Clause 5.7          |           | Compliance  |
| Compliance/pass : The EUT complies with the Not Compliance : The EUT does not comply w | •                 |                     | ard.      |             |

N/A : The test was not applicable in the standard.

## **5. MEASUREMENT RESULTS**

#### 5.1 Max. Conducted peak output power

5.1.1 Standard Applicable [FCC §15.247(b)(3)]

For systems using digital modulation in the 902–928 Mz, 2400–2483.5 Mz, and 5725–5850 Mz bands: 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power.

#### 5.1.2 Test Environment conditions

- Ambient temperature : (22 23) °C
- Relative Humidity : (58 67) % R.H.

#### 5.1.3 Measurement Procedure

The transmitter output was connected to the spectrum analyzer with an attenuator. The maximum peak output power was measured and recorded with spectrum analyzer. EUT was programmed to be in continuously transmitting mode.

All conducted power tests were performed using a test receiver in accordance with FCC KDB 558074 v03r01 Section 9.1.1 Measurement Procedure RBW  $\geq$  DTS bandwidth.

Use the instrument's band/channel power measurement function

The spectrum analyzer is set to the as follows :

- Span : ≥3 x RBW
- RBW : ≥ DTS bandwidth
- VBW : ≥ 3 x RBW
- Sweep : auto
- Detector function : peak
- Trace : max hold

Use peak market function to determine the peak amplitude level.

#### 5.1.4 Test setup

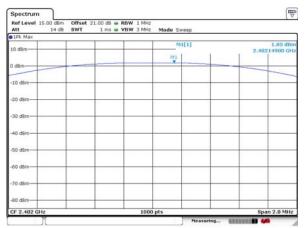

#### 5.1.5 Measurement Result

| Channel | Frequency<br>[Mtb] | Peak Power<br>[dBm] | Peak Power<br>[mW] | Limit<br>[dBm] | Test Results |

## CH 39 (2 480 Mb)

#### 5.2 Conducted peak power spectral density

#### 5.2.1 Standard Applicable [FCC §15.247(e)]

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dB m in any 3 kHz band during any time interval of continuous transmit

5.2.2 Test Environment conditions

- Ambient temperature : (22 23) °C,
- Relative Humidity : (58 67) % R.H.

#### 5.2.3 Measurement Procedure

The power spectral density conducted from the intentional radiator was measured with a spectrum analyzer connected to the antenna terminal, while EUT had the highest, middle and the lowest available channels. After the trace being stable, Use the marker-to-peak function to set the marker to the peak of the emission. The indicated level is the peak power spectral density.

All conducted power tests were performed using a test receiver in accordance with FCC KDB 558074 v03r01 Section 10.1

The spectrum analyzer is set to the as follows :

- Set analyzer center frequency to DTS channel center frequency.
- Set the span to 1.5 times the DTS bandwidth.
- Set the RBW to: 3 kHz  $\leq$  RBW  $\leq$  100 kHz.
- Set the VBW  $\geq$  3 x RBW.
- Detector = peak.
- Sweep time = auto couple.
- Trace mode = max hold.
- Allow trace to fully stabilize.
- Use the peak marker function to determine the maximum amplitude level within the RBW.
- If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.

5.2.4 Test setup

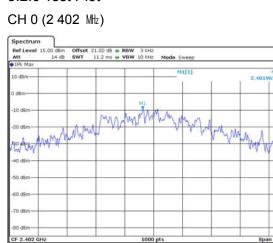

#### 5.2.5 Measurement Result

| Channel | Frequency<br>[ᢂ᠌ᡶ] | Result Value<br>[dBm] | Limit<br>[dB <b>m</b> ] | Test Results |

## 5.3 6 dB spectrum Bandwidth

#### 5.3.1 Standard Applicable [FCC §15.247(a)(2)]

Systems using digital modulation techniques may operate in the 902–928 Mz, 2400–2483.5 Mz, and 5725–5850 Mz bands. The minimum 6 dB bandwidth shall be at least 500 kz.

5.3.2 Test Environment conditions

- Ambient temperature : (22 23) °C,
- Relative Humidity : (58 67) % R.H.

#### 5.3.3 Measurement Procedure

- 1. The transmitter output (antenna port) was connected to the spectrum analyzer in peak hold mode.
- 2. The resolution bandwidth of 100 kHz and the video bandwidth of 100 kHz were used.
- 3. Measured the spectrum width with power higher than 6 dB below carrier.

The spectrum analyzer is set to the as follows :

- Set RBW = 100 kHz.
- Set the video bandwidth (VBW)  $\geq$  3 x RBW.
- Detector = Peak.
- Trace mode = max hold.
- Sweep = auto couple.
- Allow the trace to stabilize.

• Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

## 5.4 Band-edge Compliance of RF Conducted emissions

#### 5.4.1 Standard Applicable [FCC §15.247(d)]

In any 100  $^{\text{kHz}}$  bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20  $^{\text{dB}}$  below that in the 100  $^{\text{kHz}}$  bandwidth within the band that contains the highest level of the desired power, based on RF conducted.

#### 5.4.2 Test Environment conditions

- Ambient temperature : (22 23) ℃,
- Relative Humidity : (58 67) % R.H.

#### 5.4.3 Measurement Procedure

- ① Pre-calibration for the spectrum analyzer has to be done first through a reference CW signal from CAL OUT(-10 dBm)
- ② Reference frequency generated from the signal generator is supply to spectrum analyzer input port via RF cable and attenuator, and then, it's apply to offset value on spectrum analyzer.
- ③ Remove the antenna from the EUT and then, connected to spectrum analyzer via a dc Block, suitable low loss RF cable and attenuator.
- ④ Place the EUT on the table and set on the emission at the band-edge,
- (5) After the trace being stable, Use the marker-to-peak function to move the marker to the peak of the in-band emission.
- 6 The marker-delta value now displayed must comply with the limit specified in above standard.
- ⑦ please refer to the detailed procedure method KDB 558074 v03r01.

The spectrum analyzer is set to the as follows :

- Span : Wide enough to capture the peak level of the emission operating on the channel closet to the Band-edge, as well as any modulation products which fall outside of the authorized band of operation
- RBW : 100 kHz ( $\geq$  1 % of the span)
- VBW : ≥ RBW
- Sweep : auto
- Detector function : peak
- Trace : Max hold

## 5.5 Spurious RF Radiated emissions

#### 5.5.1 Standard Applicable [ FCC §15.247(d) ]

All other emissions outside these bands shall not exceed the general radiated emission limits specified in §15.209(a). And according to §15.33(a)(1), for an intentional radiator operates below 10  $_{\text{GHz}}$ , the frequency Range of measurements : to the tenth harmonic of the highest fundamental frequency or to 40  $_{\text{GHz}}$ , Whichever is lower. In addition, radiated emissions which fall in the restricted bands, as defined in Sec.15.205(a), must also comply with the radiated emission limits specified in Sec. 15.209(a)

#### 5.5.2 Test Environment conditions

- Ambient temperature : (22 23) ℃,
- Relative Humidity : (58 67) % R.H.

#### 5.5.3 Measurement Procedure

The measurements procedure of the transmitter radiated E-field is as following describe method.

The test is performed in a Shield chamber to determine the accurate frequencies, after maximum emissions level will be checked on a test chamber and measuring distance is 3 m from EUT to test antenna. (The chamber is ensured that comply with at least 6 dB above the ambient noise level)

- ① The EUT was powered ON with continuously operating mode and placed on a 0.8 meter high nonconductive table on the reference ground plane.
- ② The test antenna was used on Horn antenna for above 1 <sup>GHz</sup>, and if the below 1 <sup>GHz</sup>, broad-band antenna and Loop antenna were used for below 30 <sup>MHz</sup> and it's antenna positioned in both the horizontal and vertical plane was location at EUT during the test for maximized the emission measurement.
- ③ The output of the test antenna will be connected to a measuring receiver, and it is set to tuned over the frequency range according to required standard
- ④ The resolution bandwidth below 30MHz setting on the field strength meter is 9kHz and 30MHz~1GHz is 120kHz and above 1GHz, both Peak and Average level were measured with Spectrum Analyzer, and the RBW is set at 1MHz, VBW is set at 3MHz for Peak measure; RBW is set at 1MHz, VBW is set at 10Hz for Average measure(according ANSI C63.10:2009 clause 4.2.3.2.3 procedure for average measure). Both PK and AV level test, PK detector is used.
- (5) The fundamental frequency at which a relevant radiated signal component is detected, the test antenna will be raised and lowered through the specified range of heights in horizontal and vertical polarized orientation, until an maximum signal level is detected on the measuring receiver.
- 6 The transmitter is position x, y, z axis on rotating through 360 degrees, until the maximum signal level is detected by the measuring receiver.
- $\bigcirc$  The receiver is scanned from requested measuring frequency band and then the maximum meter reading is recorded. The radiated emissions were measured with required standard.
- The measurement results are obtained as described below: Result(dBµN/m) = Reading(dBµN) + Antenna factor(dB/m)+ CL(dB) + other applicable factor (dB)
- According to §15.33 (a)(1), Frequency range of radiated measurement is performed the tenth harmonic.

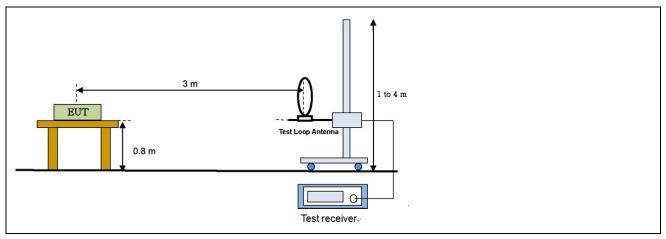

#### 5.5.4 Measurement Uncertainty

All measurements involve certain levels of uncertainties. The factors contributing to uncertainties are test receiver, Cable loss, Antenna factor calibration, antenna directivity, antenna factor variation with height, antenna phase center variation, Antenna frequency interpolation, measurement distance variation, Site imperfection, mismatch, and system repeatability based on NIS 80,81, The measurement uncertainty level with a 95 % confidence level were apply to Uncertainty of a radiation emissions measurement at Chamber of KOSTEC is  $\pm$  6.0 dB

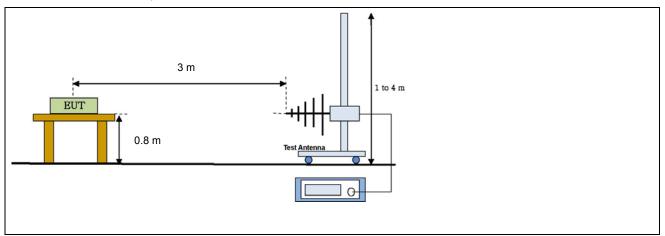

## 5.5.5 Test Configuration

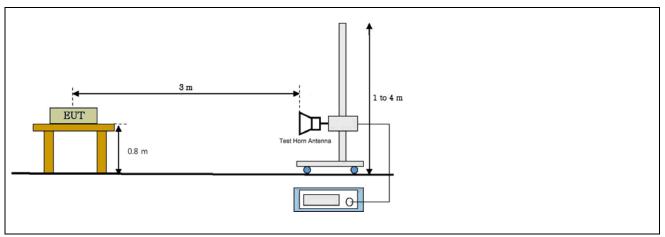

Radiated emission setup, Below 30 MHz

Radiated emission setup, Below 1 000 MHz

#### Radiated emission setup, Above 1 GHz

#### 5.5.6 Measurement Result

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates.

Following channel(s) was (were) selected for the final test as listed below.

| Freq band   | Mode | Measured CH |
|-------------|------|-------------|
| Below 1 GHz | GFSK | 19          |
| Above 1 GHz | GFSK | 0, 19, 39   |

Above 1 GHz

#### 

- Above 1 GHz is measured average and peak detector mode on Spectrum analyzer in accordance with FCC Rule15.35
- Limit: 54 dB / //m(Average), 74 dB / //m(Peak), Attenuated more than 20 dB below the permissible value.
- It is not recorded on the report that the reading of emissions are attenuated more than 20 dB below the permissible limits or the field strength is too small to measured.
- For the below 30 Mb, measured any other signal is not detected on test receiver
- The transmitter radiated spectrum was investigated from 9  $\,\rm kHz\,$  to 25  $\,\rm GHz.$

Freq.(Mtz) : Measurement frequency, Reading(dB, //m) : Indicated value for test receiver,

Table (Deg) : Directional degree of Turn table,

Antenna (Height, Pol, Fctr) : Antenna Height, Polarization and Factor

Cbl(dB) : Cable loss, Pre AMP(dB) : Preamplifier gain(dB)

Meas Result (dB,W/m) :Reading(dB,W/m)+ Antenna factor.(dB/m)+ CL(dB) - Pre AMP(dB)

Limit(dB µ/m): Limit value specified with FCC Rule, Mgn(dB): FCC Limit (dB µ/m) - Meas Result(dB µ/m)

#### 5.6 Antenna requirement

#### 5.6.1 Standard applicable [FCC §15.203, §15.247(4)(1)]

For intentional device, according to §15.203, an intentional radiator shall be designed to ensure that no antenna other than furnished by responsible party shall be used with the device.

The use of a permanently attached antenna or of an antenna that user a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section.

The manufacturer may design the unit So that broken antenna can be replaced by the user, but the Use of a standard antenna jack or electrical connector is prohibited.

And according to \$15.247(4)(1), the conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi.

#### 5.6.2 Antenna gain

| Frequency Band | Gain [dBi]           | Limit [dBi] | Results    |
|----------------|----------------------|-------------|------------|
| <b>2.4</b> GHz | 1.56 <sup>dB</sup> i | ≤ 6         | Compliance |

## 5.7 AC Power Conducted emissions

#### 5.7.1 Standard Applicable [FCC §15.207(a)]

For intentional radiator that is designed to be connected to the public utility(AC)power line, the radio frequency. Voltage that is conducted back onto the AC power line on any frequencies hopping mode within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a 50 uH/50 ohms line Impedance stabilization network(LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between the frequency ranges.

#### §15.207 limits for AC line conducted emissions;

| Frequency of Emission(Mt) | Conducted Limit (dB µV) |            |  |  |  |  |
|---------------------------|-------------------------|------------|--|--|--|--|
|                           | Quasi-peak              | Average    |  |  |  |  |
| 0.15 ~ 0.5                | 66 to 56 *              | 56 to 46 * |  |  |  |  |
| 0.5 ~ 5                   | 56                      | 46         |  |  |  |  |
| 5 ~ 30                    | 60                      | 50         |  |  |  |  |

\* Decreases with the logarithm of the frequency

#### 5.7.2 Test Environment conditions

- Ambient temperature : (22 23) °C
- Relative Humidity : (58 67) % R.H.

#### 5.7.3 Measurement Procedure

The measurements were performed in a shielded room. EUT was placed on a non-metallic table Height of 0.4 m above the reference ground plane. They were folded back and forth forming a bundle 30 cm to 40 cm long and were hanged at a 40 cm height to the ground plane. Each EUT power lead, except ground (safety) lead, was individually connected through a LISN to Input power source. Both lines of power cord, live and neutral, were measured.

#### 5.7.4 Used equipment

| Equipment     | Model No. | Serial No. | Manufacturer    | Next cal date | Cal<br>interval | Used |

\*Test Program: "ESXS-K1 V2.2"

#### Measurement uncertainty

Conducted Emission measurement: 3.5 dB (CL: Approx 95%, k=2)

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates.

Following channel(s) was (were) selected for the final test as listed below.

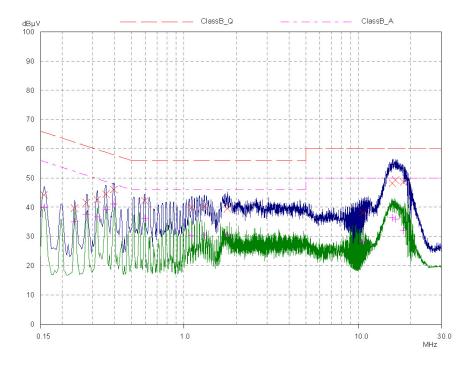

| Mode | Measured CH |
|------|-------------|
| GFSK | 19          |

#### 5.7.5 Measurement Result
