10. ELECTRICAL INTERFACE

10.1 Transmission line and matching

The matching network has to be individually designed using one, two or three components.

t, w = Unique dimensioning according to your PCB *
 C = Inductor and capacitor values according to your specific device*

* gigaAnt provides this service upon request

10.2 Test board dimensions

The testboard is designed for evaluation purposes for Comata 2.4 GHz SMD antenna. The board has the same size as a typical CF card and is fitted with an U.FL connector.

10.3 Test board matching

The testboard is matched with above specified component. Note! The component value(s) will vary depending on size of PCB, surrounding components etc.

11. SOLDERING

11.1 Recommended soldering conditions

11.2 Leadfree soldering

The antenna has been tested and approved for leadfree soldering. The reflow curve and solder paste used is listed below.

12. RELIABILITY

12.1 Temperature and Humidity

Item	Standard	Low	High	Duration
Operating temperature	EN/IEC 60068-2-2, Test Bd: Dry heat	-30 degC	+90 degC	-
Temperature cycling	EN/IEC 60068-2-14, Test Na: Change of temperature	-40 degC	+90 degC	500 cycles /10 min
Storage life Humidity	EN/IEC 60068-2-1, Test Ca: Damp heat	+60 degC / 90% RH		500 h

12.2 Mechanical

Item	Standard	Low	High	Duration
Bending	IEC 60068-2-21, Test Ue1: Bending	Bending 1 mm at a rate of 1 mm/s with support at end of PCB 1mm depth on reference board		
Shear	IEC 60068-2-21, Test Ue3: Shear	Force of 5 N applied to the side of the antenna.		
Drop test		Dummy weight: 150g Height: 170cm		One drop at each side, total drops: 6

12.3 Miscellaneous

Item	Standard	Low	High	Duration
Solderability	EN/IEC 60068-2-58, Test Td	Visual inspection of soldering pads. Estimation of how many % of the pads that are well tin plated.		

12.4 Judgement standard

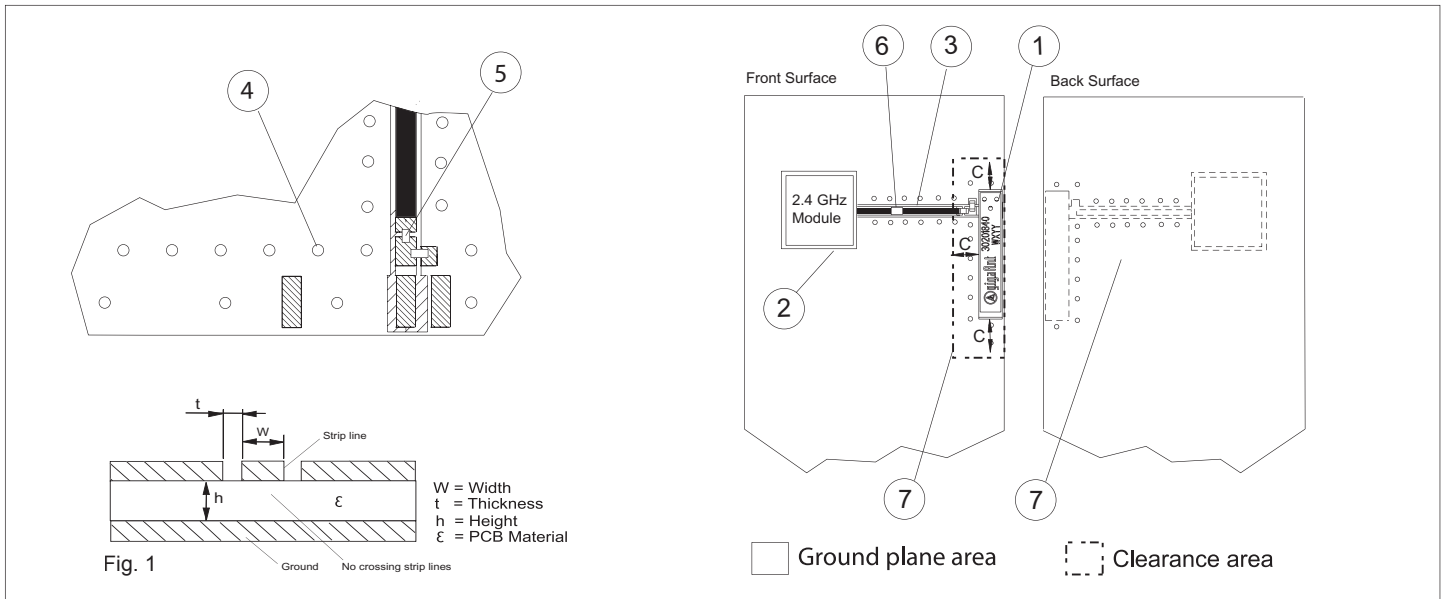

The judgement of the above tests should be made as follows:

1. Visual inspection - Normal appearance with no obvious cracking, peeling-off.
2. Electrical inspection - The DUT satisfies the VSWR specification throughout the 2.4-2.5 GHz band

13. HAZARDOUS MATERIAL REGULATION CONFORMANCE

Cadmium and cadmium compound.	Lead and lead compound
Organic brominated compound (PBB, PBDE)	Mercury and mercury compound
Polychlorinated biphenyl (PCB)	Sexivalent chrome compound
Polychlorinated naphthalene (PCN)	Chlorinated paraffin (CP)
Organic tin compound	Mirex
Asbestos	Formaldehyde
Azo compound	Tetra-bromo-bisphenol-A-bis (TBBP-A-bis)

14. APPLICATION EXAMPLE

The antenna is of a quarter wave type and is dependent on the groundplane area to complete the antenna function. The antenna performance is also dependent on the size of the groundplane.

1.	<p>Placement of the antenna</p> <p>The antenna shall be placed on a groundplane area, preferably at the edge of the PCB oriented as above.</p>
2.	<p>Placement of 2.4 GHz module</p> <p>To avoid losses in the strip line, the module shall be placed as close to the antenna as possible.</p>
3.	<p>Strip line</p> <p>The strip line must be dimensioned according to your specific PCB. (see fig 1). No crossing strip lines are allowed between the strip line and its ground plane.</p>
4.	<p>Via connections</p> <p>To avoid spurious effects, via connections must be made to analogue ground.</p>
5.	<p>Component matching</p> <p>Component values are depending on antenna placement, PCB dimensions and location of other components.</p>
6.	<p>DC Block</p> <p>Might be needed depending on RF Module configuration.</p>
7.	<p>Clearance</p> <p>Front surface: Minimum clearance to other components, C = 2-5 mm. Back surface: Components allowed.</p>
8.	<p>Casing material</p> <p>No metal casing or plastics using metal flakes shall be used, avoid also metallic based paint or laquer.</p>

**Note ! Incorrect implementation of the antenna will affect the performance.
