Class 2 – Permissive Change Request

FCC ID: STZSRM9000TU – TMC Radio PTY Ltd

TMC Radio PTY Ltd request a Class 2 permissive change for the radio listed above.

The enclosure of a standard SRM9000 TU radio has been changed to a lower mechanical profile and given the model number PSRM9000 TU.

No other changes have been made to the radio with the internal electronics remaining identical to those previously certified

Testing has been carried out to determine whether the EMC signature of this radio has changed with regard the following parameters:

- transmitter power output
- frequency stability
- conducted power output
- radiated power output

While the radio has remained compliant with FCC parts 22 and 90 several of the results indicate an degradation in the EMC signature of this radio

Therefore a Class 2 permissive change is requested.

Documents showing this change have been submitted to support this change but I have not submitted the previous documents as no changes have been made

A handwritten signature in black ink that reads "Andrew Cutler". The signature is written in a cursive, flowing style.

Andrew Cutler
General Manager
EMC Technologies NZ Ltd
