### 3.2 Power supply system utilised

Power supply voltage: 12VDC

### 3.3 Short description of the Equipment under Test (EuT)

The Equipment under test (EUT) is a 390MHz transmitter. The main function of the EUT is acted as a remote control to control the on/off of the garage door. When the button is pressed, the transmitter will transmit the signal by Pulsed Code Modulation to the receiver installed in the garage door to control the garage door close or open. The EUT is powered by one 12V alkaline battery

Number of tested samples: One  
 Serial number: Not Labelled  
 Dimensions: L: 8.0cm W: 4.5cm H: 1.2cm

#### EuT operation mode:

The equipment under test was operated during the measurement under the following conditions:

- Operation mode 1: Transimmitting mode \_\_\_\_\_
- Operation mode 2: N/A \_\_\_\_\_

Building 2, 171 Meihua Road,  
Futian District,  
Shenzhen, 518049  
China**

**FCC Registration No.: 746887**

### **4.2 Environmental conditions**

During the measurement the environmental conditions were within the listed ranges:

Temperature: 15-35 ° C

Humidity: 30-60 %

Atmospheric pressure: 86-106 kPa

### **4.3 Statement of the measurement uncertainty**

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16-4-2 /11.2003 „Uncertainties, statistics and limit modelling – Uncertainty in EMC measurements“ and is documented in the quality system acc. to ISO 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.
