## FCC Part 15E TEST REPORT

Application No.:	No.: SHEM1603000991CR						
Applicant:	hejiang Dahua Vision Technology Co., Ltd.						
FCC ID:	SVNDH-PFM880						
Equipment Under Tes NOTE: The following sa	t (EUT): ample(s) was/were submitted and identified by the client as						
Product Name:	Name:         5G Wireless Video Transmission Device AP						
Model No.(EUT):	DH-PFM880						
Add Model No.:	PFM880, DHI-PFM880						
Standards:	FCC PART 15 Subpart E: 2015						
Date of Receipt:	2016-03-16						
Date of Test:	Test:         2016-04-12 to 2016-04-18						
Date of Issue:	2016-05-03						
Test Result:	Pass*						

\*In the configuration tested, the EUT detailed in this report complied with the standards specified above.

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

Report No.: SHEM160300099102 Page: 2 of 72

### 3 Test Summary

Test Item	Test Requirement	Test method	Result
Antenna Requirement	15.203 & 15.407 a(1)&(3)	-	PASS
AC Power Line Conducted Emission	15.407 b(6)	ANSI C63.10 (2013) Clause 6.2	PASS
26 dB Emission bandwidth	15.403 i		PASS
Minimum 6 dB bandwidth (5.725-5.85 GHz band )	15.407 (e)		PASS
Maximum Conducted output power	15.407 a(1)&(3)		PASS
Transmitter Power Control	15.407 (h)(1)	KDB 789033 D02 KDB 644545	N/A
Peak Power spectrum density	15.407 a(1)&(3)	KDB 662911 D01 v02r01 KDB 662911 D02 v01	PASS
Radiated Spurious emissions and Band-edge	15.209 & 15.407		PASS
Transmission in the Absence of Data	15.407 (c)		PASS
Frequency Stability	15.407 (g)		PASS
Dynamic Frequency Selection	15.407 (h)(2)	KDB 905462 D02 KDB 905462 D03	N/A

Notes1: N/A: The device no DFS Band.

Note2: There are series models mentioned in this report, and they are the similar in electrical and electronic characters. Only the model DH-PFM880 was tested since their differences were the model number, trade name and appearance deviation.

### 5 General Information

### 5.1 Client Information

Applicant:	Zhejiang Dahua Vision Technology Co., Ltd.
Address of Applicant:	The 1st Floor, Building F, No.1199 Binan Road, Changhe Street, Binjiang District, Hangzhou, Zhejiang, P.R.China
Manufacturer:	Zhejiang Dahua Vision Technology Co., Ltd.
Address of Manufacturer:	The 1st Floor, Building F, No.1199 Binan Road, Changhe Street, Binjiang District, Hangzhou, Zhejiang, P.R.China
Factory:	Zhejiang Dahua Vision Technology Co., Ltd.
Address of Factory:	No.1199 Binan Road, Changhe Street, Binjiang District, Hangzhou, Zhejiang, P.R.China

### 5.2 General Description of E.U.T.

Product Description:		Portable product with WiFi function			
Rated Input:		DC 48V 0.5A PoE			
	Model No.:	GRT-48005	GRT-480050A-FW		
	Rated Input:	AC 100V-240V 50/60Hz			
Adapter:	Rated Output:	DC 48V 500mA			
	Cable length:	AC port:	2 wires		
		DC port:	90 cm		

### 5.3 Technical Specifications

Operation Frequency:	5745-5825MHz
Modulation Technique:	OFDM(64QAM, 16QAM, QPSK, BPSK)
Data Rate:	802.11a: 6/9/12/18/24/36/48/54Mbps 802.11n: MCS0-15 up to 300Mbps
Antenna Type	Integral antenna (2Tx2R MIMO)
Antenna Gain	16dBi
Number of Channel:	802.11 a/n(HT20): 5 Channel 149, 153, 157, 161, 165 802.11 n(HT40): 2 Channel 151, 159

Report No.: SHEM160300099102 Page: 6 of 72

#### a. Operation Frequency of Each Channel:

Channel No.	Frequency (MHz)			Frequency (MHz)	
149	5745	155	5775	161	5805
151	5755	157	5785	165	5825
153	5765	159	5795		

Note: The above Frequency and Channel in boldface were 40MHz bandwidth; in boldface and Italic were 80MHz bandwidth.

#### b. The device employs MIMO technology. Below are the possible configurations.

Antenna Configurations		Single Input S	Single Output	Spatial Diversity Multiplexing- MIMO function		
		Antenna A	Antenna B	Antenna A	Antenna B	
5GHz	11a	$\boxtimes$	$\boxtimes$			
11n(HT20)		$\boxtimes$				
11n(HT40)		$\boxtimes$	$\square$	$\square$	$\square$	

Remark: Support; NOT Support

#### 5.4 Test Mode

Test Mode	Description of Test Mode
Engineering mode	Using test software to control EUT working in continuous transmitting, and select channel and modulation type.

#### 5.5 Test Channel

Preliminary tests were performed in all tests in different data rata and antenna configurations at lowest channel, the data rates of worse case as below were chosen for final test.

Band	802.11a		802.11 n(HT20)			802.11n(HT40)			
	Channel	Freq	Rate	Channel	Freq	Rate	Channel	Freq	Rate
	149	5745	6Mbps	149	5745	MCS0	151	5755	MCS0
U-NII 3	157	5785	6Mbps	157	5785	MCS0	-	-	-
	165	5825	6Mbps	165	5825	MCS0	159	5795	MCS0

### 5.6 Description of Support Units

The EUT has been tested with support equipments as below.

Description	Manufacturer	Model No.	Supplied By
Laptop	Lenovo	ThinkPad X100e	SGS

Software name	Manufacturer	Version	Supplied By
Atheros Radio Test2	Atheros	V 2.3	SGS

# SGS

Report No.: SHEM160300099102 Page: 7 of 72

### 5.7 Test Location

All tests were performed at: SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. 588 West Jindu Road, Xinqiao, Songjiang, 201612 Shanghai, China Tel: +86 21 6191 5666 Fax: +86 21 6191 5678

### 5.8 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

### • CNAS (No. CNAS L0599)

CNAS has accredited SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

### • FCC – Registration No.: 402683

SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered and fully described in a report filed with the Federal Communications Commission (FCC). The acceptance letter from the FCC is maintained in our files. Registration No.: 402683.

### Industry Canada (IC) – IC Assigned Code: 8617A

The 3m Semi-anechoic chamber of SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 8617A-1.

### • VCCI (Member No.: 3061)

The 3m Semi-anechoic chamber and Shielded Room of SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: R-3868 and C-4336 respectively.

Report No.: SHEM160300099102 Page: 8 of 72

### 5.9 Measurement Uncertainty

No.	Parameter	Measurement Uncertainty
1	Radio Frequency	< ±1 x 10 <sup>-5</sup>
2	Total RF power, conducted	< ±1.5 dB
3	RF power density, conducted	< ±3 dB
4	Spurious emissions, conducted	< ±3 dB
5	All emissions, radiated	< ±6 dB (30MHz – 1GHz) < ±6 dB (above 1GHz)
6	Temperature	< ±1°C
7	Humidity	< ±5 %
8	DC and low frequency voltages	< ±3 %

Report No.: SHEM160300099102 Page: 9 of 72

### 6 Equipments Used during Test

Item	Test Equipment	Manufacturer	Model No.	Serial No.	Cal. Date	Cal. Due date

### 7 Test Results

### 7.1 E.U.T. Test Conditions

Test Voltage: AC 120V, 50Hz

**Requirements:** 15.31(e) For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage. For battery operated equipment, the equipment tests shall be performed using a new battery.

Operating	
Environment:	

	Temperature:	20.0 -25.0 °C
nt:	Humidity:	35-75 % RH
	Atmospheric Pressure:	99.2 -102.0 kPa

**Test frequencies:** 

According to the 15.31(m) Measurements on intentional radiators or receivers, other than TV broadcast receivers, shall be performed and. if required. reported for each band in which the device can be operated with the device operating at the number of frequencies in each band specified in the following table:

Frequency range over which device operates	Number of frequencies	Location in the range of operation
1 MHz or less	1	Middle
1 to 10 MHz	2	1 near top and 1 near bottom
More than 10 MHz	3	1 near top. 1 near middle and 1 near bottom

Pursuant to Part 15.31(c) For swept frequency equipment, measurements shall be made with the frequency sweep stopped at those frequencies chosen for the measurements to be reported

Report No.: SHEM160300099102 Page: 11 of 72

### 7.2 Antenna Requirement

#### Standard requirement:

#### 15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited

This requirement does not apply to carrier current devices. Further, this requirement does not apply to intentional radiators that must be professionally installed, such as perimeter protection systems and some field disturbance sensors, or to other intentional radiators which, in accordance with §15.31(d), must be measured at the installation site. However, the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this part are not exceeded.

#### EUT Antenna:

The antenna is 2Tx2R Spatial Multiplexing MIMO with Cross-Polarized Antenna. The gain is less than 16dBi.

The intentional radiators that must be professionally installed.

Report No.: SHEM160300099102 Page: 12 of 72

### 7.3 Conducted Emissions on Mains Terminals

Frequency Range:	150 KHz
Class/Severity:	Class B
Limit:	Fre

### 150 KHz to 30 MHz

Frequency range	Class B Limits: dB (µV)			
MHz	Quasi-peak	Average		
0.15 to 0.50	66 to 56	56 to 46		
0.50 to 5	56	46		
5 to 30	60	50		

Note1: The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.50MHz.

Note2: The lower limit is applicable at the transition frequency.

#### Test site/setup:

Test instrumentation set-up	):

Frequency Range	Detector	RBW	VBW
9KHz to 150Hz	Quasi-peak	200Hz	500Hz
150KHz to 30MHz	Quasi-peak	9kHz	30kHz

Ground Reference Plane

### **Test Procedure:**

- a) The mains terminal disturbance voltage was measured with the EUT in a shielded room.
- b) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides  $50\Omega/50\mu$ H +  $5\Omega$  linear impedance. The power cables of all other units of the EUT were connected to a second LISN, which was bonded to the ground reference plane in the same way as the LISN for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded
- c) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane, but separated from metallic contact with the ground reference plane by 0.1m of insulation.
- d) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to

Report No.: SHEM160300099102 Page: 13 of 72

the horizontal ground reference plane. The LISN was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISN mounted on top of the ground reference plane. This distance was between the closest points of the LISN and the EUT. The mains lead of EUT excess 0.8m was folded back and forth parallel to the lead so as to form a horizontal bundle with a length between 0.3m and 0.4m. All other units of the EUT and associated equipment were at least 0.8 m from the LISN.

Remark: Pre-scan was performed with peak detected on all ports, Quasi-peak & average measurements were performed at the frequencies at which maximum peak emission level were detected. Pretest under all modes; choose the worst case mode (802.11a in Middle channel) record on the report. Please see the attached Quasi-peak and Average test results.

Test Result: Pass

Report No.: SHEM160300099102 Page: 14 of 72

Remark: Level = Read Level + LISN/ISN Factor + Cable Loss.

### 7.4 Duty Cycle

In order to assist with the determination of the average level of fundamental and spurious emissions field strength, measurements were made of duty cycle to determine the transmission duration and the silent period time of the transmitter. The transmitter duty cycle was measured using a spectrum analyser in the time domain and calculated by using the following calculation:

Duty cycle= T on time / Period

Duty factor = 10 \* log (1/Duty cycle)

If duty cycle of test signal is > 98%, duty factor is not required.

If duty cycle of test signal is < 98%, duty factor shall be considered.

#### Test Data:

Test Mode	T on time(ms)	Period(ms)	Duty Cycle	Duty Factor
802.11a	10	10	100%	0
802.11n(HT20)	10	10	100%	0
802.11n(HT40)	10	10	100%	0

**Test Result:** All measurements are to be performed with the EUT transmitting at 100 percent duty cycle at its maximum power control level. So duty factor is not required.

### 7.5 26dB Emission Bandwidth

For purposes of this subpart the emission bandwidth shall be determined by measuring the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, that are 26 dB down relative to the maximum level of the modulated carrier. Determination of the emissions bandwidth is based on the use of measurement instrumentation employing a peak detector function with an instrument resolution bandwidth approximately equal to 1.0 percent of the emission bandwidth of the device under measurement.

#### Test Data:

#### For Antenna A:

	802.11a 802.11			02.11 n(HT2	.11 n(HT20) 802			02.11n(HT40)

### 7.7 Maximum Conducted output power

### Test Setup:

#### **Test Procedure:**

- dure: a) Place the EUT on the table and set it in transmitting mode.
  - b) Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the spectrum.
  - c) Set the spectrum analyzer as RBW=1MHz, VBW≥3\* RBW, Span=40/80MHz, Sweep=auto, Detector = RMS
  - d) Set the occur band to the entire emission 26dB bandwidth of the signal.
  - e) Trace average at least 100 traces in power averaging (i.e., RMS) mode.
  - f) Compute power by integrating the spectrum across the EBW (or, alternatively, the entire 26dB occupied bandwidth) of the signal using the instrument's band power measurement function with band limits set equal to the EBW (or occupied bandwidth) band edges.
  - g) Record the max. Power channel reading.
  - h) Repeat above procedures until all the frequency measured were complete.

#### Test Limit:

nit:	Frequency Band	EUT Category	Limit
		Outdoor Access Point	1W(30dBm) The maximum e.i.r.p≤125 mW(21 dBm) at any elevation angle above 30 degrees as measured from the horizon.
	U-NII-1	<ul> <li>Fixed Point-to-point</li> <li>Access Point</li> <li>Indoor Access Point</li> </ul>	1W(30dBm)
		Mobile and Portable client device	250mW (24dBm)
	U-NII-2a		Lesser of 250mW (24dBm) or 11dBm +
	U-NII-2c	-	10log B*
	U-NII-3		1W (30dBm)
	Note: *Where B	is the 26dB emission band	width in MHz.

#### Test Result:

Pass

Domork	•	•	•	•	•	•	•		

Remark:

1) Output Peak Power = Reading Power + Cable loss+ Duty Cycle Correction Factor

2) Cable loss= 0.5dB. Duty cycle of test signal is > 98%, duty factor is not required, reference Section 7.4

3) Per KDB 662911, the conducted powers at Antenna A and Antenna B were first measured separately during MIMO transmission as shown in section above. The measured values were then summed in linear power units then converted back to dBm.

Test plot as below:

#### 7.8 Peak Power Spectral Density

#### **Test Setup:**

- **Test Procedure**: a) Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum.
  - b) Set span 40/80/160MHz; RBW = 1 MHz; VBW  $\ge$  3 MHz.
  - c) Number of points in sweep  $\geq$  2 Span / RBW; Sweep time = auto.
  - d) Detector = RMS, Trigger = Free run Record the marker level for the particular mode.
  - e) Use the peak search function on the instrument to find the peak of the spectrum and record its value.
  - f) Repeat these steps for other channel and device modes.

#### Test Limit:

Frequency Band	EUT Category	Limit
	Outdoor Access Point	17dBm/MHz

#### 7.9 Radiated Spurious Emissions and Band-edge

Test site/setup:

Measurement Distance: 3m (Semi-Anechoic Chamber)

Test instrumentation set-up:

Frequency Range(MHz)	Detector	RBW	VBW
0.009-0.090	Peak	10kHz	30kHz
0.009-0.090	Average	10kHz	30kHz
0.090-0.110	Quasi-peak	10kHz	30kHz
0.110-0.490MHz	Peak	10kHz	30kHz
0.110-0.490	Average	10kHz	30kHz
0.490 -30	Quasi-peak	10kHz	30kHz
30-1000	Quasi-peak	100kHz	300kHz
Above 1000	Peak	RBW=1MHz	VBW≥RBW
	Average		VBW=10Hz

Sweep=Auto

#### 15.209 Limit:

Frequency(MHz)	Limit (dBuV/m)
0.009-0.490	128.5 ~ 93.8
0.490-1.705	73.8 ~63.0
1.705-30	69.5
30-88	40.0
88-216	43.5
216-960	46.0
960-1000	54.0
Above 1000	54.0

Note: 15.35(b), Unless otherwise specified, the limit on peak radio frequency emissions is 20dB above the maximum permitted average emission limit applicable to the equipment under test. This peak limit applies to the total peak emission level radiated by the device.

15.407 Limit:

Operation Frequency (MHz)	EIRP Limit (dBm/MHz)	Equivalent Field Strength (dBµV/m)		
5150-5250				
5250-5350	-27	68.3		
5470-5725				
	-27* <sup>1</sup>	68.3* <sup>1</sup>		
5725-5850	-17* <sup>2</sup>	78.3* <sup>2</sup>		

Note: The following formula is used to convert the EIRP to field strength  $E = \frac{1000000\sqrt{30P}}{2}$  uV/m, where P is the EIRP (Watts).

Remark: \*<sup>1</sup> Without 10MHz of band edge; \*<sup>2</sup> Within 10MHz of band edge

Report No.: SHEM160300099102 Page: 57 of 72

**Test Setup:** 

Figure3. Above 1GHz radiated emissions test configuration

Report No.: SHEM160300099102 Page: 58 of 72

- **Test Procedure:** 1) The procedure used was ANSI Standard C63.10. When an emission was found, the table was rotated to produce the maximum signal strength. An initial pre-scan was performed for in peak detection mode using the receiver. The EUT was measured for both the Horizontal and Vertical polarities and performed a pre-test three orthogonal planes. For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage. The worst case emissions were reported.
  - Low noise amplifier was used below 1GHz, High pass Filter and amplifier was used above 3GHz. We did not use any amplifier or filter between 1G and 3GHz.
  - 3) Test were performed for their spatial orthogonal(X, Y, Z), the worst test data (X orthogonal) was submitted.
    - a) For this intentional radiator operates below 25 GHz. the spectrum shall be investigated to the tenth harmonic of the highest fundamental frequency. And above the third harmonic of this intentional radiator, the disturbance is very low. So the test result only displays to 5rd harmonic.
    - b) As shown in Section, for frequencies above 1000MHz. the above field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.
  - 4) Radiated spurious emissions were investigated while operating in SISO mode, however, it was determined that single antenna operation produced the worst emissions. Since the emissions produced from SISO operation were found to be more than 20 dB below the limit, the SISO emissions are not report.
  - 5) Pretest under all modes during 30MHz to 1GHz; choose the worst case mode (Middle channel of 802.11a on band 3) record on the report.
  - 6) No spurious emissions were detected within 20dB of limit below 30MHz.

Test Result: Pass

## SGS

Report No.: SHEM160300099102 Page: 69 of 72

Remark: 1. Test Level = Receiver Reading + Antenna Factor + Cable Loss- Preamplifier Factor

2. No any other emission which falls in restricted bands can be detected and be reported.

3. If the Peak value below the AV Limit, the AV test doesn't perform for this submission.

All frequencies within the "Restricted bands" have been evaluated to compliance. Section 15.205 Restricted bands of operation.

Only spurious emissions are permitted in any of the frequency bands listed below:

Report No.: SHEM160300099102 Page: 70 of 72

#### 7.10 Transmission in the Absence of Data

#### 7.10.1 Standard Applicable

The device shall automatically discontinue transmission in case of either absence of information to transmit or operational failure. These provisions are not intended to preclude the transmission of control or signalling information or the use of repetitive codes used by certain digital technologies to complete frame or burst intervals. Applicants shall include in their application for equipment authorization a description of how this requirement is met.

#### 7.10.2 Test Result

While the EUT is not transmitting any information, the EUT can automatically discontinue transmission and become standby mode for power saving. The EUT can detect the controlling signal of ACK message transmitting from remote device and verify whether it shall resend or discontinue transmission.

Report No.: SHEM160300099102 Page: 71 of 72

#### 7.11 Frequency stability

Test setup:

Test Procedure:

- a) The EUT was place in the temperature chamber, the DC leads and RF output cable exited the chamber though an opening made for that purpose.
- b) After operate the equipment in standby conditions for 15 minutes before proceeding. The temperature was varied from -20 °C to +55 °C at intervals of not more than 10 °C. The frequency stability was read from the spectrum analyzer and the frequency stability and input voltage was record.

#### Test Limit: The frequency of carrier signal shall be maintained within the band of operation

#### Test Data:

Test Co	onditions	Operation	Test Frequency	Freq. Dev.	Limit	Result
Volt (V AC)	Temp (℃)	Frequency(MHz)	(MHz)	(Hz)	(GHz)	nesuit
	Extreme(-20)		5825.0087	0.0087		Pass
	Extreme(-10)	) ) ) ) )	5825.0098	0.0098	5.725-5.85	Pass
	Extreme(0)		5825.0007	0.0007		Pass
Normal(120)	Extreme(+10)		5825.0045	0.0045		Pass
Normal(120)	Extreme(+20)		5825.0007	0.0007		Pass
	Extreme(+30)		5825.0053	0.0053		Pass
	Extreme(+40)		5825.0063	0.0063		Pass
	Extreme(+55)		5825.0058	0.0058		Pass
Extreme(102)	Norma(20)		5825.0080	0.0080		Pass
Extreme(138)	Norma(20)		5825.0015	0.0015		Pass

Remark: Based on the results of the frequency stability test shown above the frequency deviation results measured are very small. As such it is determined that the channels at the band edge would remain in-band when the maximum measured frequency deviation noted during the frequency stability tests is applied. Therefore the device is determined to remain operating in band over the temperature and voltage range as tested.

Report No.: SHEM160300099102 Page: 72 of 72
