RF exposure analysis for the Wireless Thermostat AZDZKZTS1W (FCC ID: SVS-DZK-ZTS)

The output power of the device is extremely low (89.83 dBuV/m at 3 m, equivalent to 0.29 mW) and far below the 60/f(GHz) mW (60/2.45 mW = 24.48 mW) threshold. For that reason the equipment is categorically excluded from routine environmental evaluation for RF exposure and it is deemed to comply with FCC limits for exposure to electromagnetic fields.

Sincerely,

By: Mr. Luis Martín Title: R&D Dirección
