

FCC ID: SW8ST25200 Page: 1 / 1 **Report No.:** T210422D09-MF Rev.: 00

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] *-[$\sqrt{f(GHz)}$] ≤ 3.0

The tune-up power is -4 dBm +/- 1dB, therefore the highest tune-up power is -3.00 dBm (0.50 mW) @ 2402 MHz

When the minimum *test separation distance* is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

So,

```
(0.50 \text{mW} / 5 \text{mm}) * (2.402 \text{GHz} ^0.5) = 0.2
```

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] * [$\sqrt{f(GHz)}$] = 0.2 < 3.0

Therefore, standalone SAR measurements are not required for both head and body.

Note:

1. The tune up power referred the AVG power of the test report T210422D09-RP for SAR test exclusion purpose.
