1. GENERAL INFORMATION

1.1 Test Facility

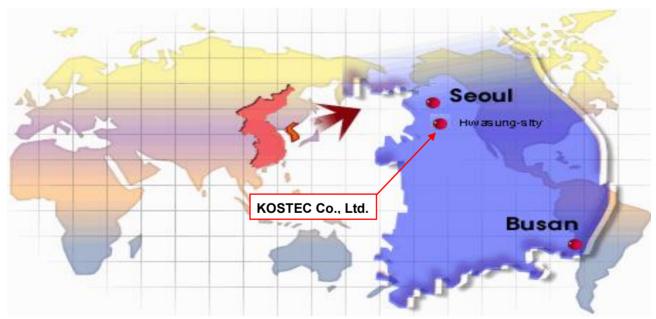

Test laboratory and address

KOSTEC Co., Ltd. 28(175-20,Annyeong-dong)406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea Telephone Number: 82-31-222-4251 Facsimile Number: 82-31-222-4252

Registration information

KOLAS No.: KT232 RRA (National Radio Research Agency): KR0041 FCC Designation No.: KR0041 IC Designation No.: KR0041 VCCI Membership No.: 2005

1.2 Location

1.3 Revision History of test report

| Rev. | Revisions | Effect page | Reviewed | Date |
|------|---------------|-------------|--------------------|---------------|
| - | Initial issue | All | Gyeong Hyeon, Park | 2023. 07. 03. |
| | | | | |

2. EQUIPMENT DESCRIPTION

The product specification described herein was declared by manufacturer. And refer to user's manual for the details.

| Equipment Name | Pathfinder2 MINI |
|-----------------------|---|
| Model No | PM20C (Family model names: PM 20C, PM-20C, PATHFINDER2 MINI, PATHFINDER2 MINI TRX) |
| Usage | Dog training device |
| Serial Number | Proto type |
| Modulation technology | FHSS |
| Modulation type | GFSK |
| Emission Type | F1D |
| Maximum output power | 28.94 dBm |
| Operated Frequency | 915.25 MHz ~ 927.75 MHz |
| Channel Number | 51 |
| Operation temperature | -20 °C ~ 50 °C |
| Power Source | DC 3.7 V |
| Antenna Description | Whip antenna fixed on PCB by special screw bolt, gain : 0 dBi |
| Remark | The device was operating at its maximum output power for all measurements. The radiation measurements are performed in X, Y, Z axis positioning. Only the worst case (X) is shown in the report. The above DUT's information was declared by manufacturer. Please refer to the specifications or user manual for more detailed description. |
| FCC ID | SWN-PM20C |

3. SYSTEM CONFIGURATION FOR TEST

3.1 Characteristics of equipment

The Equipment Under Test (EUT) contains the following capabilities: This equipment is Dog training device. The detailed explanation is refer as user manual.

3.2 Used peripherals list

| Description | Model No. | Serial No. | Manufacture | Remark |
|-------------|-----------|------------|-------------|--------|
| - | - | - | - | - |

3.3 Product Modification

N/A

3.4 Operating Mode

Constantly transmitting with a modulated carrier at maximum power on the low, middle and high channels.

3.5 Test Setup of EUT

The measurements were taken in continuous transmit / receive mode using the TEST MODE.

For controlling the EUT as TEST MODE, the test program and the test cables were provided by the applicant.

3.6 Parameters of Test Software Setting

During testing, Channel & Power Controlling Software provided by the customer was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product.

TX Power setting value during test

| Band | TX Power setting value | | | | |
|--------------|------------------------|-----------|---------|--|--|
| Band | Low CH | Middle CH | High CH | | |
| 900 MHz band | Default | Default | Default | | |

3.7 Table for Test condition

| Test Items | Channel No | Frequency (^{MIZ}) | Operated Condition |
|---------------------------------|------------|------------------------------|---|
| Channel Separation | 24, 25 | 921.25, 921.5 | Hopping on and continuous modulation setting mode |
| Number of Hopping Channels | 0 ~ 50 | 915.25 ~ 927.75 | Hopping on mode |
| Time of occupancy | 38 | 921.5 | Hopping on mode |
| | 0 | 915.25 | |
| Peak Output Power | 25 | 921.5 | Hopping off and continuous modulation setting mode |
| | 50 | 927.75 | |
| Danda dan Oran Kanan | 0 | 915.25 | Hopping off and continuous |
| Band-edge Compliance | 50 | 927.75 | modulation setting mode |
| Spurious RF conducted emissions | - | - | Frequency band setting by required |
| Spurious radiated emissions | - | - | standard (FCC Rules)* |

*Note: Channel number is selected lowest, middle, highest channel and also hopping on/off mode operation

4. SUMMARY TEST RESULTS

| Description of Test | FCC Rule | Reference Clause | Used | Test Result |
|----------------------------------|---------------------------------------|------------------|-------------|-------------|
| Peak Output Power | § 15.247(b)(2) | Clause 5.1 | \boxtimes | Compliance |
| 20 dB Bandwidth | § 15.247(a)(1) | Clause 5.2 | \boxtimes | Compliance |
| Channel Separation | § 15.247(a)(1) | Clause 5.3 | \boxtimes | Compliance |
| Number of Hopping Channels | § 15.247(a)(1) | Clause 5.4 | \boxtimes | Compliance |
| Time of Occupancy | § 15.247(a)(1) | Clause 5.5 | \boxtimes | Compliance |
| Conducted Spurious Emissions | § 15.247(d) | Clause 5.6 | \boxtimes | Compliance |
| Radiated Spurious Emissions | § 15.247(d), § 15.209 and § 15.205 | Clause 5.7 | \boxtimes | Compliance |
| Antenna Requirement | § 15.203 | Clause 5.8 | \boxtimes | Compliance |
| AC Power Conducted emissions | § 15.207 | Clause 5.9 | \boxtimes | Compliance |
| Compliance: The ELIT complies wi | th the essential requirements in | the standard | | |

Compliance: The EUT complies with the essential requirements in the standard.

Not Compliance : The EUT does not comply with the essential requirements in the standard.

 $\ensuremath{\mathsf{N/A}}$: The test was not applicable in the standard.

Procedure Reference

FCC CFR 47, Part 15. Subpart C-15.247 558074 D01 15.247 Meas Guidance v05r02 ANSI C 63.10-2013

5. MEASUREMENT RESULTS

5.1 Peak Output Power

5.1.1 Standard Applicable [FCC §15.247(b)(2)]

For frequency hopping systems operating in the 902–928 MHz band: 1 watt for systems employing at least 50 hopping channels; and, 0.25 watts for systems employing less than 50 hopping channels, but at least 25 hopping channels, as permitted under paragraph (a)(1)(i) of this section.

5.1.2 Test Environment conditions

• Ambient temperature : (22 ~ 23) °C • Relative Humidity : (43 ~ 45) % R.H.

5.1.3 Measurement Procedure

ANSI C63.10 (2013) : Filing and Measurement Guidelines for Frequency Hopping Spread Spectrum Systems. The peak output power was measured using the marker to peak function of the spectrum analyzer.

The spectrum analyzer is set to the as follows :

- Span : approximately 5 times the 20 dB bandwidth
- RBW : > 20 dB bandwidth of the emission being measured
- VBW \geq RBW.
- Sweep time = auto
- Detector = peak.
- Trace mode = max hold.
- Allow trace to fully stabilize.
- Use the peak marker function to determine the maximum amplitude level.

5.2 20 dB Bandwidth

5.2.1 Standard Applicable [FCC §15.247(a)(1)]

Operation under the provisions of this Section is limited to frequency hopping and digitally modulated intentional radiators that comply with the following provisions:

(1) (i) For frequency hopping systems operating in the 902–928 MHz band: if the 20 dB bandwidth of the hopping channel is less than 250 kHz, the system shall use at least 50 hopping frequencies and the average time of occupancy on any frequency shall not be greater than 0.4 seconds within a 20 second period; if the 20 dB bandwidth of the hopping channel is 250 kHz or greater, the system shall use at least 25 hopping frequencies and the average time of occupancy on any frequency on any frequencies of a least 25 hopping frequencies and the average time of occupancy on any frequency shall not be greater than 0.4 seconds within a 10 second period. The maximum allowed 20 dB bandwidth of the hopping channel is 500 kHz.

5.2.2 Test Environment conditions

• Ambient temperature : (22 ~ 23) °C • Relative Humidity : (43 ~ 45) % R.H.

5.2.3 Measurement Procedure

ANSI C63.10 (2013): Filing and Measurement Guidelines for Frequency Hopping Spread Spectrum Systems.

1. The transmitter output (antenna port) was connected to the spectrum analyzer in peak hold mode.

2. The bandwidth of the fundamental frequency was measured by spectrum analyzer with RBW \geq 1 % of the 20 dB bandwidth and VBW \geq RBW.

3. Measured the spectrum width with power higher than 20 dB below carrier.

5.2.4 Test setup

5.3 Channel Separation

5.3.1 Standard Applicable [FCC §15.247(a)(1)]

Operation under the provisions of this Section is limited to frequency hopping and digitally modulated intentional radiators that comply with the following provisions:

(1) Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW. The system shall hop to channel frequencies that are selected at the system hopping rate from a pseudo randomly ordered list of hopping frequencies. Each frequency must be used equally on the average by each transmitter. The system receivers shall have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shall shift frequencies in synchronization with the transmitted signals.

5.3.2 Test Environment conditions

• Ambient temperature : (22 ~ 23) °C • Relative Humidity : (43 ~ 45) % R.H.

5.3.3 Measurement Procedure

ANSI C63.10 (2013) : Filing and Measurement Guidelines for Frequency Hopping Spread Spectrum Systems.

1. The transmitter output (antenna port) was connected to the spectrum analyzer in peak hold mode.

2. The resolution bandwidth of 30 kHz and the video bandwidth of 100 kHz were used.

3. After the trace being stable, the reading value between the peak of the adjacent channels using the marker- Delta function was recorded as the measurement results.

The spectrum analyzer is set to the as follows :

- Span : wide enough to capture the peak of two adjacent channels
- RBW : ≥ 1% of the span
- VBW : ≥ RBW
- Sweep : auto
- Detector function : peak
- Trace : max hold

572 Test Environment conditions

• Ambient temperature : (22 ~ 23) °C • Relative Humidity : (42 ~ 43) % R.H.

5.7.3 Measurement Procedure

The measurements procedure of the Spurious RF Radiated emissions is as following describe method.

1. The EUT was placed on the top of a rotating table (0.8 meters for below 1 GHz and 1.5 meters for above 1 GHz) above the ground at a 3 meter camber. The table was rotated 360 degree to determine the position of the highest radiation.

2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna master.

3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both Horizontal and vertical polarizations of the antenna are set to make the measurement. 4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotating table was turned from 0 - 360 degrees to find the maximum reading.

5. The measuring receiver was set to peak detector and specified bandwidth with max hold function. 6. Low, Middle and high channels were measured, and radiation measurements are performed in X, Y, Z axis positioning. And found the worst axis position and only the test worst case mode is recorded in the report.

- · The measurement results are obtained as described below: Result(dB μ V/m) = Reading(dB μ V) + Antenna factor(dB/m)+ CL(dB) + other applicable factor (dB)
- The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 3 MHz for RMS Average (Duty cycle < 98 %) for Average detection (AV) at frequency above 1 GHz, then the measurement results was added to a correction factor (10 log(1/duty cycle)).
- The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 10 Hz (Duty cycle ≥ 98 %) for Average detection (AV) at frequency above 1 GHz.
- According to §15.33 (a)(1), Frequency range of radiated measurement is performed the tenth harmonic.

Above test was performed in accordance with ANSI C63.10-2013 Section 6.10.5 & 6.4, 6.5, 6.6

5.7.4 Measurement Uncertainty

The measurement uncertainties shown below were calculated in accordance with the requirements of ANSI C63.10-2013. All measurement uncertainty values are shown with a coverage factor of k = 2 to indicate a 95% level of confidence. The measurement uncertainty shown below meets or exceeds the UCISPR measurement uncertainty values specified in CISPR 16-4-2 and, thus, can be compared directly to specified limits to determine compliance.

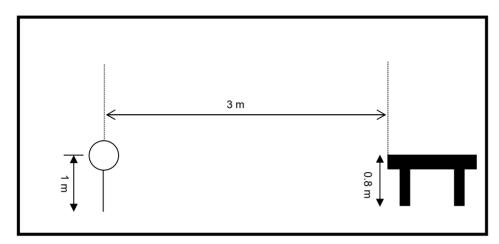

Radiated Emission measurement: Below 1 GHz: 3.80 dB (CL: Approx 95 %, k=2)

Above 1 GHz: 3.42 dB (CL: Approx 95 %, k=2)

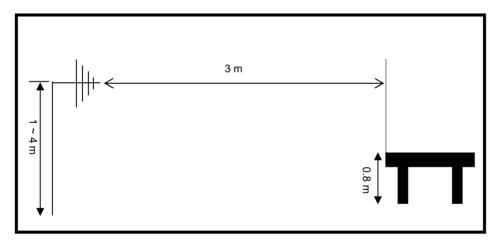

5.7.5 Test Configuration

¥Note

• Above 1 GHz is measured average and peak detector mode on Spectrum analyzer in accordance with FCC Rule15.35

• Limit: 54 dB,///m(Average), 74 dB,///m(Peak), Attenuated more than 20 dB below the permissible value.

• It is not recorded on the report that the reading of emissions are attenuated more than 20 dB below the permissible limits or the field strength is too small to measured.

• For the below 30 MHz and above 2.785 GHz, measured any other signal is not detected on test receiver

• The transmitter radiated spectrum was investigated from 9 kHz to 26.5 GHz.

• The reading includes values for Antenna factor, Cable loss, and Amp gain.

5.8 Antenna requirement

5.8.1 Standard applicable [FCC §15.203]

For intentional device, according to §15.203, an intentional radiator shall be designed to ensure that no antenna other than furnished by responsible party shall be used with the device.

The use of a permanently attached antenna or of an antenna that user a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section.

The manufacturer may design the unit so that broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

5.8.2 Antenna details

| Frequency Band | Antenna Type | Gain [dBi] | Results |
|----------------|---|------------|------------|
| 900 MHz | Whip antenna fixed on PCB by special screw bolt | 0 dBi | Compliance |

KOSTEC

5.9 AC Power Conducted emissions

5.9.1 Standard Applicable [FCC §15.207(a)]

For intentional radiator that is designed to be connected to the public utility(AC)power line, the radio frequency. Voltage that is conducted back onto the AC power line on any frequencies hopping mode within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a 50 μ H/50 ohms line Impedance stabilization network(LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between the frequency ranges.

§15.207 limits for AC line conducted emissions;

| Frequency of Emission(ML) | Conducted Limit (dBµV) | | | | | | |
|---------------------------|------------------------|------------|--|--|--|--|--|
| Frequency of Emission(Mb) | Quasi-peak | Average | | | | | |
| 0.15 ~ 0.5 | 66 to 56 * | 56 to 46 * | | | | | |
| 0.5 ~ 5 | 56 | 46 | | | | | |
| 5 ~ 30 | 60 | 50 | | | | | |

* Decreases with the logarithm of the frequency

5.9.2 Test Environment conditions

• Ambient temperature : (22 ~ 23) °C • Relative Humidity : (42 ~ 43) % R.H.

5.9.3 Measurement Procedure

EUT was placed on a non- metallic table height of 0.8 m above the reference ground plane. Cables connected to EUT were fixed to cause maximum emission. Test was made with the antenna positioned in both the horizontal and vertical planes of polarization. The measurement antenna was varied in height above the conducting ground plane to obtain the Maximum signal strength.

5.9.4 Used equipment

| Equipment | Model No. | Serial No. | Serial No. Manufacturer | | Cal interval | Used |

*Test Program: "ESXS-K1 V2.2"

Measurement uncertainty

The measurement uncertainties shown below were calculated in accordance with the requirements of ANSI C63.10-2013. All measurement uncertainty values are shown with a coverage factor of k = 2 to indicate a 95% level of confidence. The measurement uncertainty shown below meets or exceeds the UCISPR measurement uncertainty values specified in CISPR 16-4-2 and, thus, can be compared directly to specified limits to determine compliance.

0.009 kHz ~ 30 MHz(L) : 3.94 dB(CL: Approx 95 %, *k*=2) 0.009 kHz ~ 30 MHz(N) : 3.32 dB(CL: Approx 95 %, *k*=2)
