## FCC ID: SWN-TD41UT

According to KDB 447498 D01 General RF Exposure Guidance v06.

For frequencies below 100  $M_{\rm Z}$ , the following may be considered for SAR test exclusion (also illustrated in Appendix C).

- 1) For test separation distance > 50 mm and < 200 mm, the power threshold at the corresponding test separation distance at 100 Mb in step b) is multiplied by [1 + log(100/f(mb))]
- For test separation distance ≤ 50 mm, the power threshold determined by the equation in C) 1) for 50mm and 100 Mb is multiplied by <sup>1</sup>/<sub>2</sub>

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] x [ $\sqrt{f(GHz)}$ ]  $\leq 3.0$ 

## 1. SAR test exclusion threshold: 3.0

Step a): at 100 ₩ and 50 mm, power threshold = (3.0 \* 50) / sqrt(0.1) = 474.342 mW Step b1): 474.342 + (50 - 50) x (27.195/150) = 474.342 mW Step c1): 474.342 x [1 + log(100/27.195)] = 742.588 mW Step c2): 742.588/2 = 371.294 mW

Frequency	Maximum Average Target Power	Maximum Tune up	Maximum Average Output Power		Limit
	(dB <b>m)</b>	(dB)	(dBm)	(mW)	
27.195 MHz	23	1	24	251.189	371.294 mW

## 2. Conclusion: No SAR is required.

Note: Measured maximum output power: 23.49 dBm / Tune-up tolerance : 23 dBm  $\pm$  1 dB
