

The AirFiber radio is a highly efficient 880 carrier OFDM radio utilizing low inter-carrier spacing (110 kHz) and higher order 256QAM modulation with two transmitters and two receivers in a MIMO configuration. The output stages have been designed for ultra-low distortion for both the fidelity of the 256QAM modulation, and to meet the spectral emissions at the band edges. These design choices lead to a highly spectrally efficient system with a very sharp roll off at the band edges. Due to the sharp roll off, the spectral measurements are done on an Agilent PXA spectrum analyzer with band power measurements enabled to demonstrate compliance. The main carrier power is set to nominal output to meet 2500mV/m at 3m (as demonstrated in the radiated tests). The measured fundamental power is normalized to 0dB(m) so the band edge rejection can be observed directly. All measurements use average power (RMS) detectors. Out-of-band measurement bandwidths are 1 MHz.

On the lowest frequency (shown below), both transmitter outputs are shown to meet the general radiation emission limits of part 15.209 limit of 500uV/m at 3m (which is 74dB below the fundamental output of 2500mV/m) in the first 1MHz below 24.0GHz.

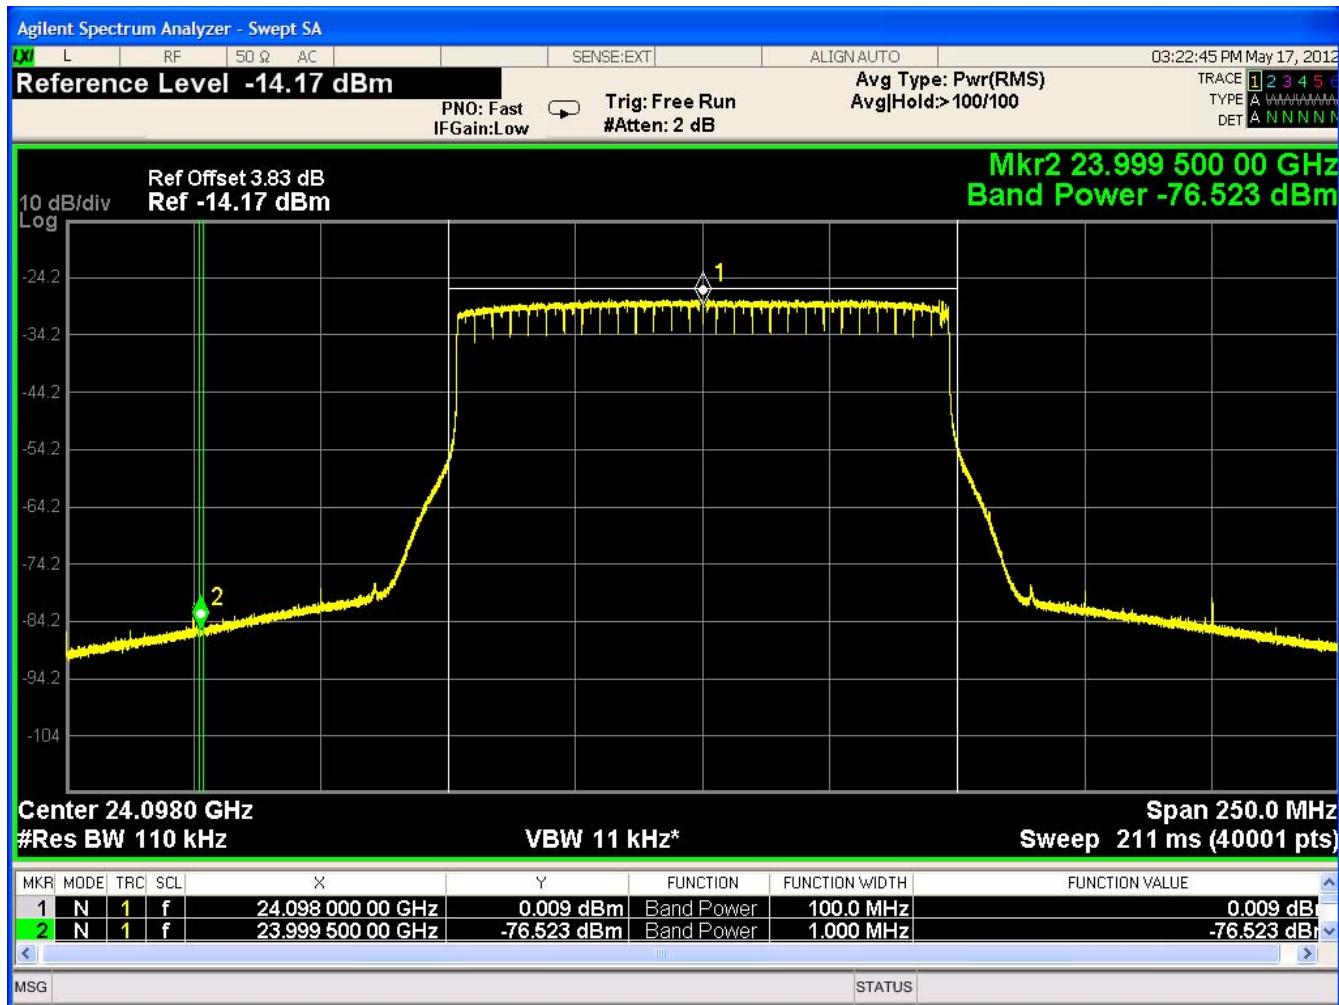

### TX0 – QPSK Modulation

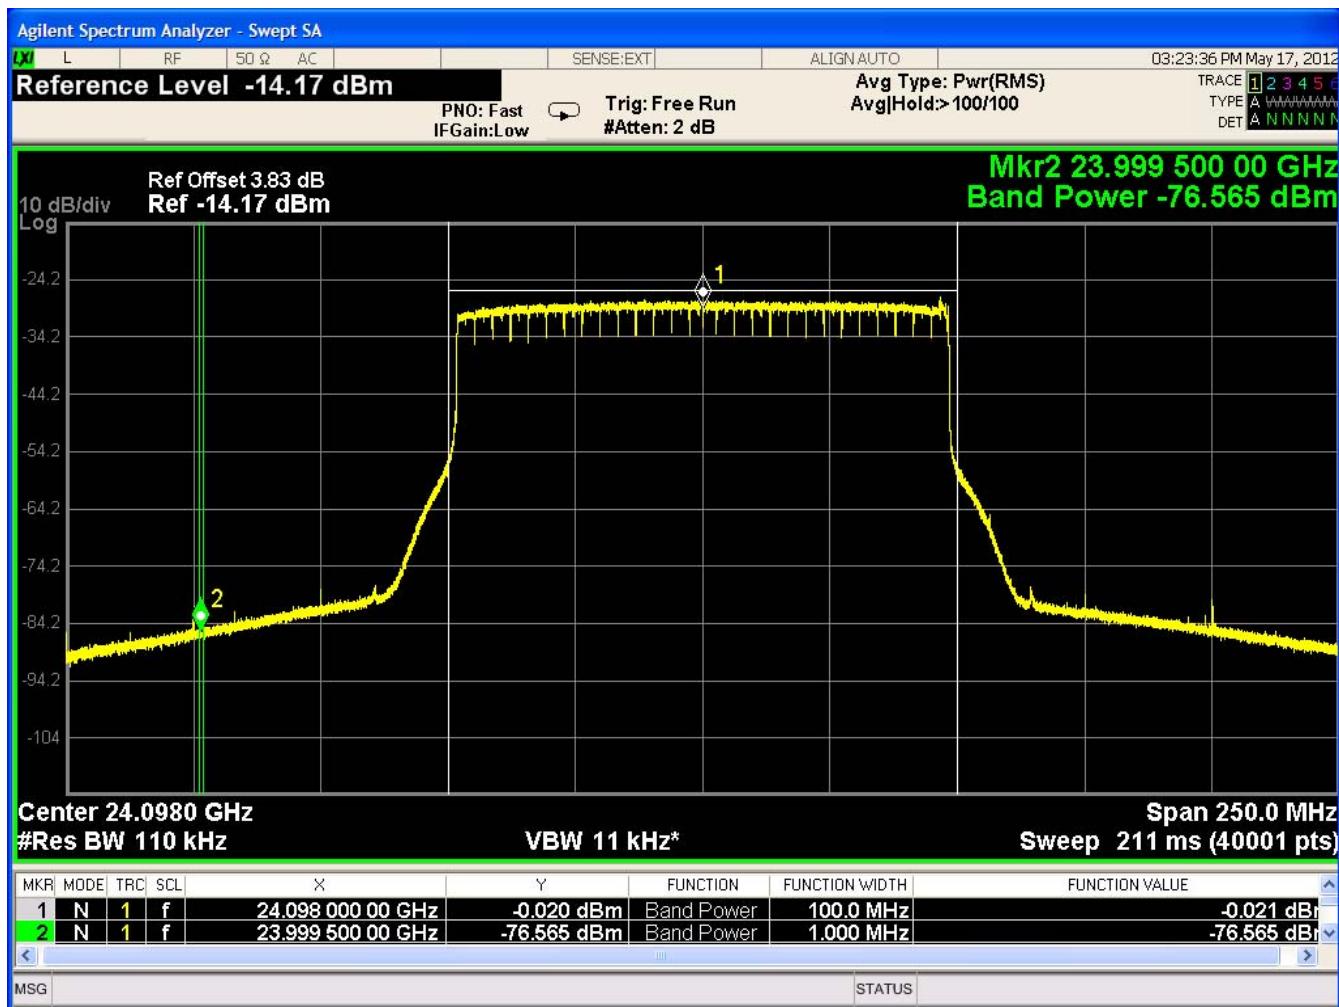

## **TX0 – 256QAM Modulation**

## TX1 – QPSK Modulation

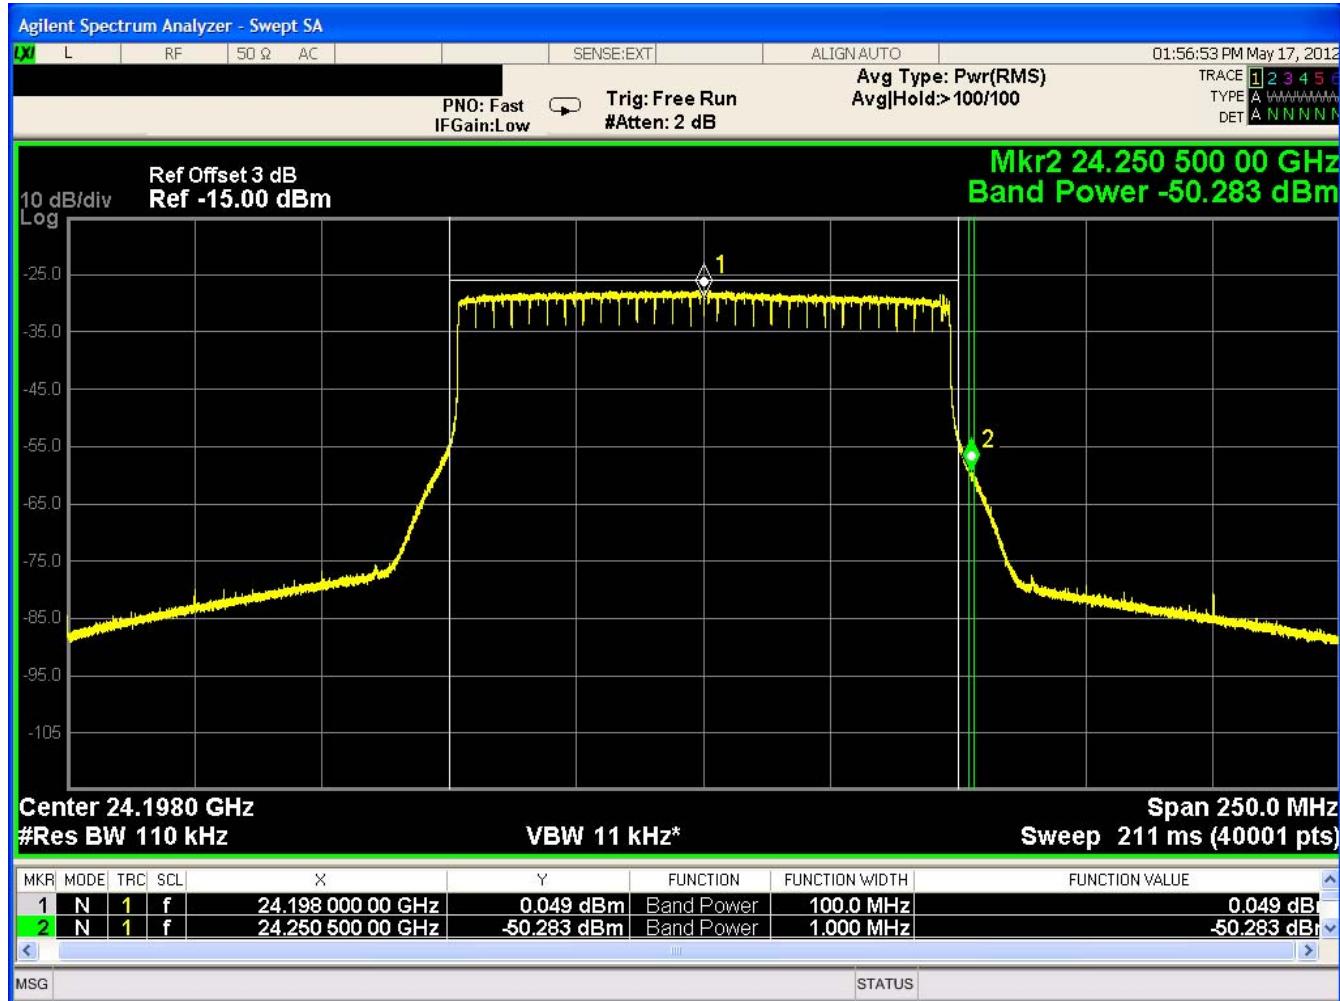

## TX1 – 256QAM Modulation

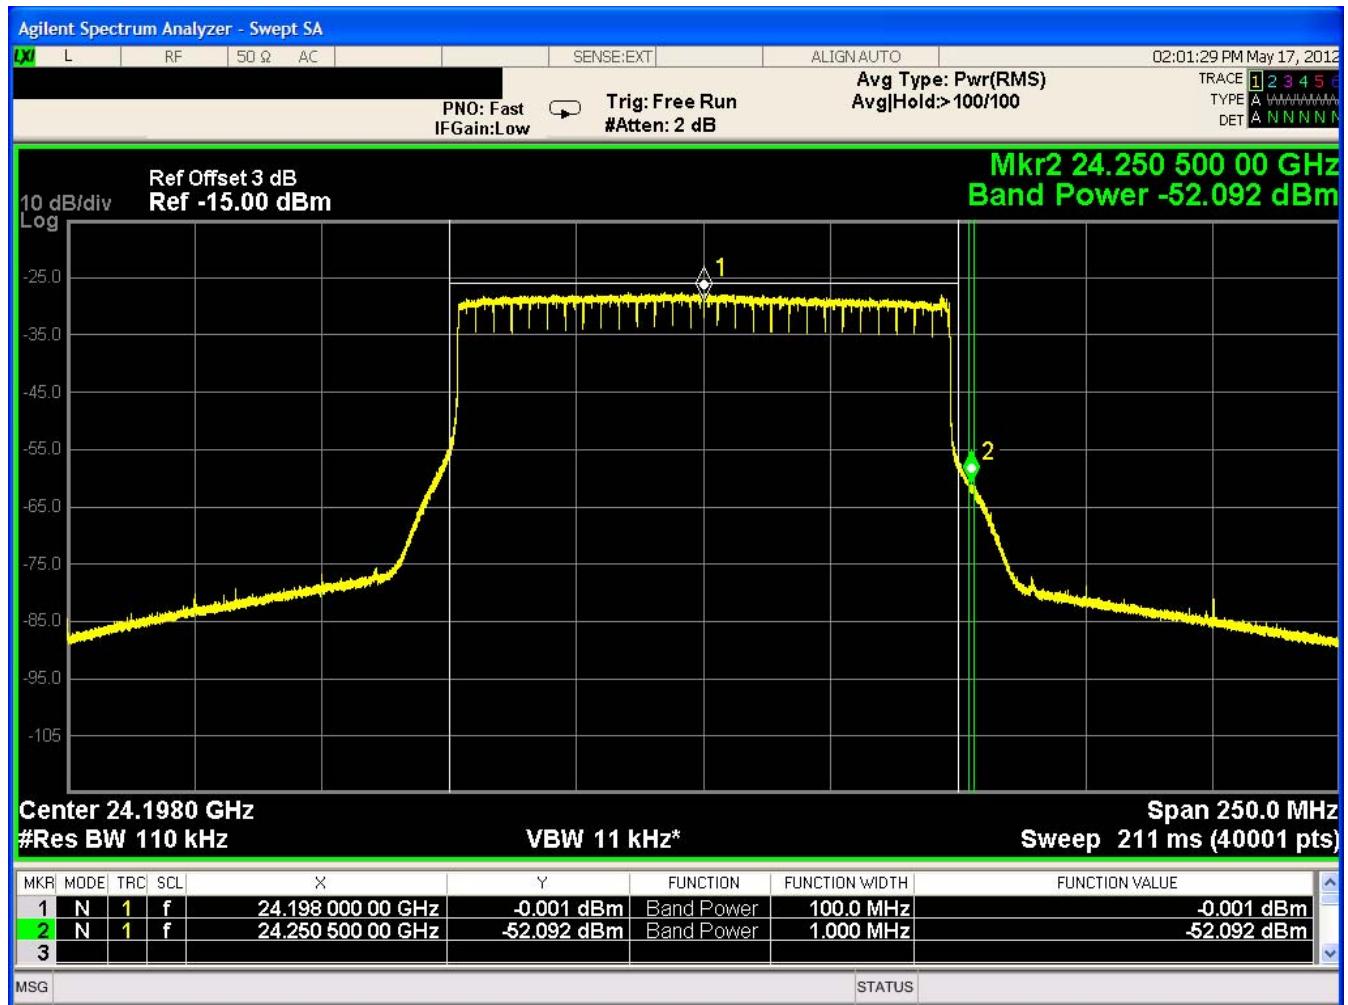

On the upper frequency both transmitters meet the specification of part 15.249(d) where out-of-band emissions are 50dB below the fundamental power in the first 1 MHz above 24.25GHz.

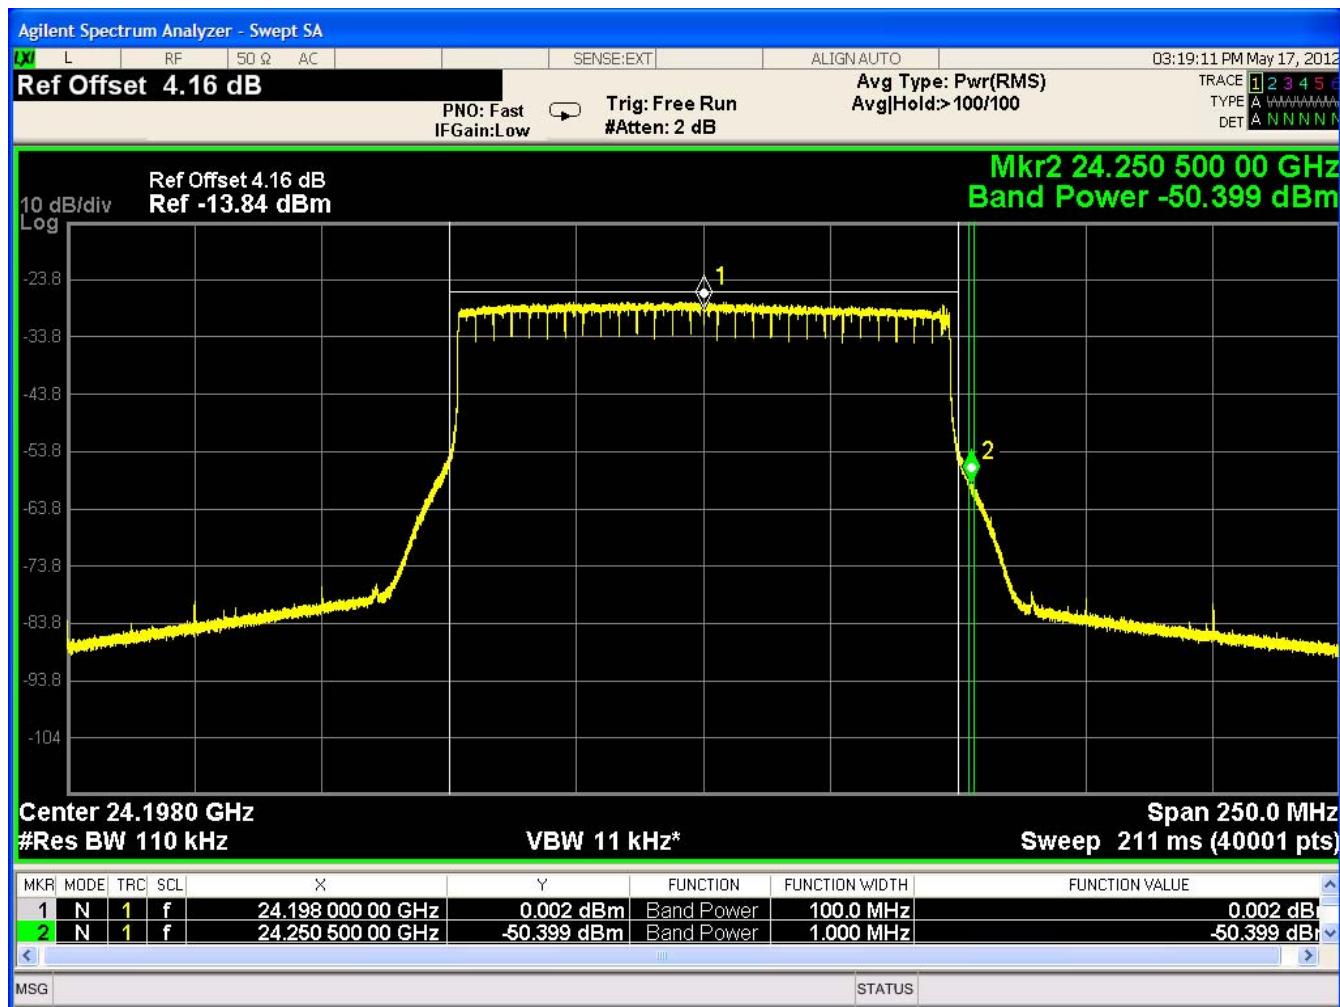

### **TX0 – QPSK Modulation**

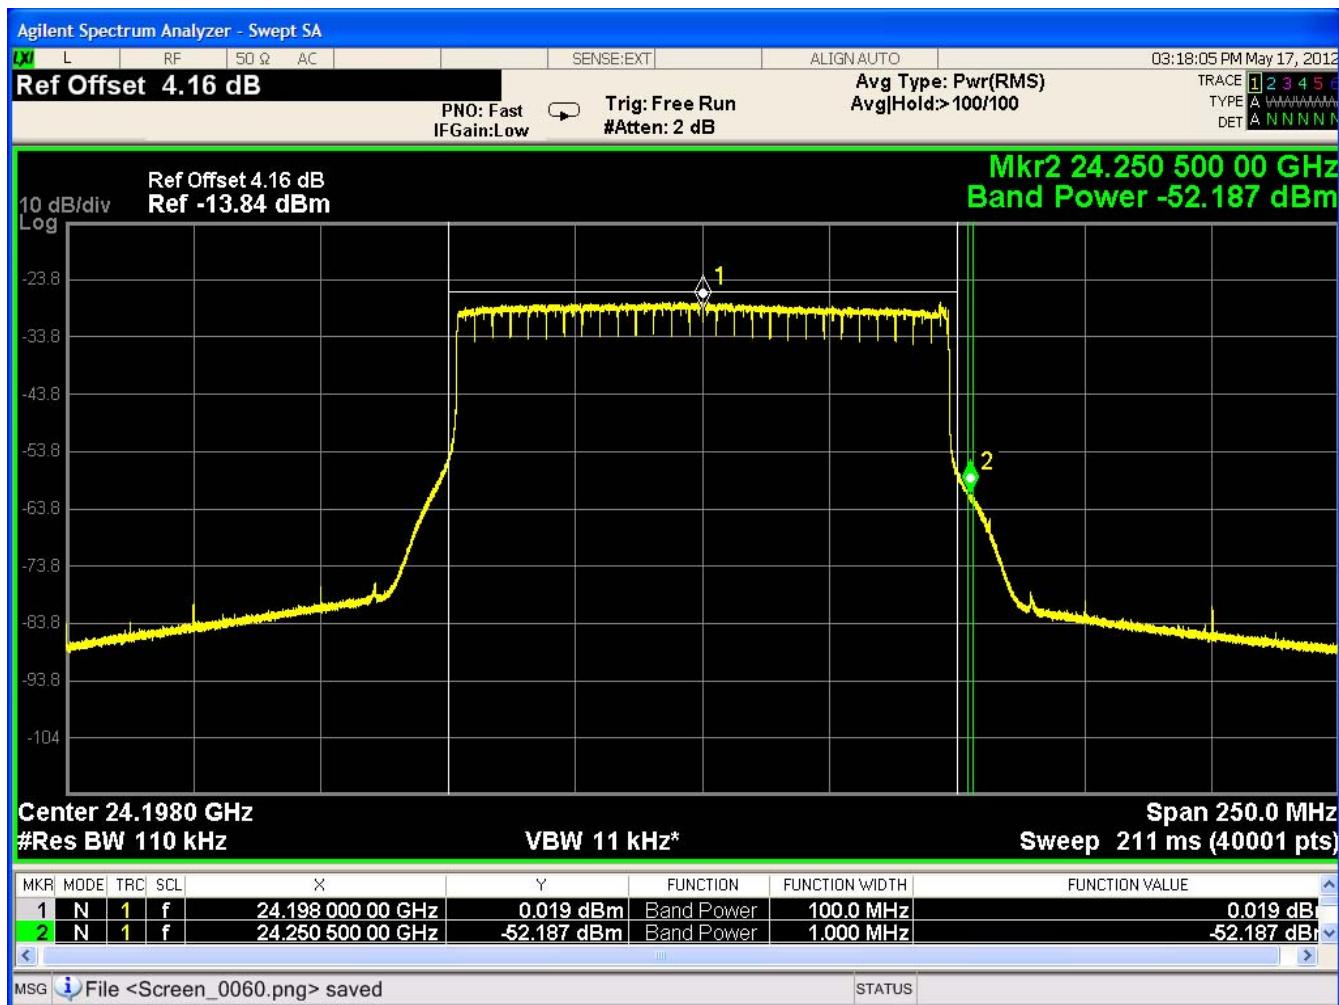

## **TX0 – 256QAM Modulation**

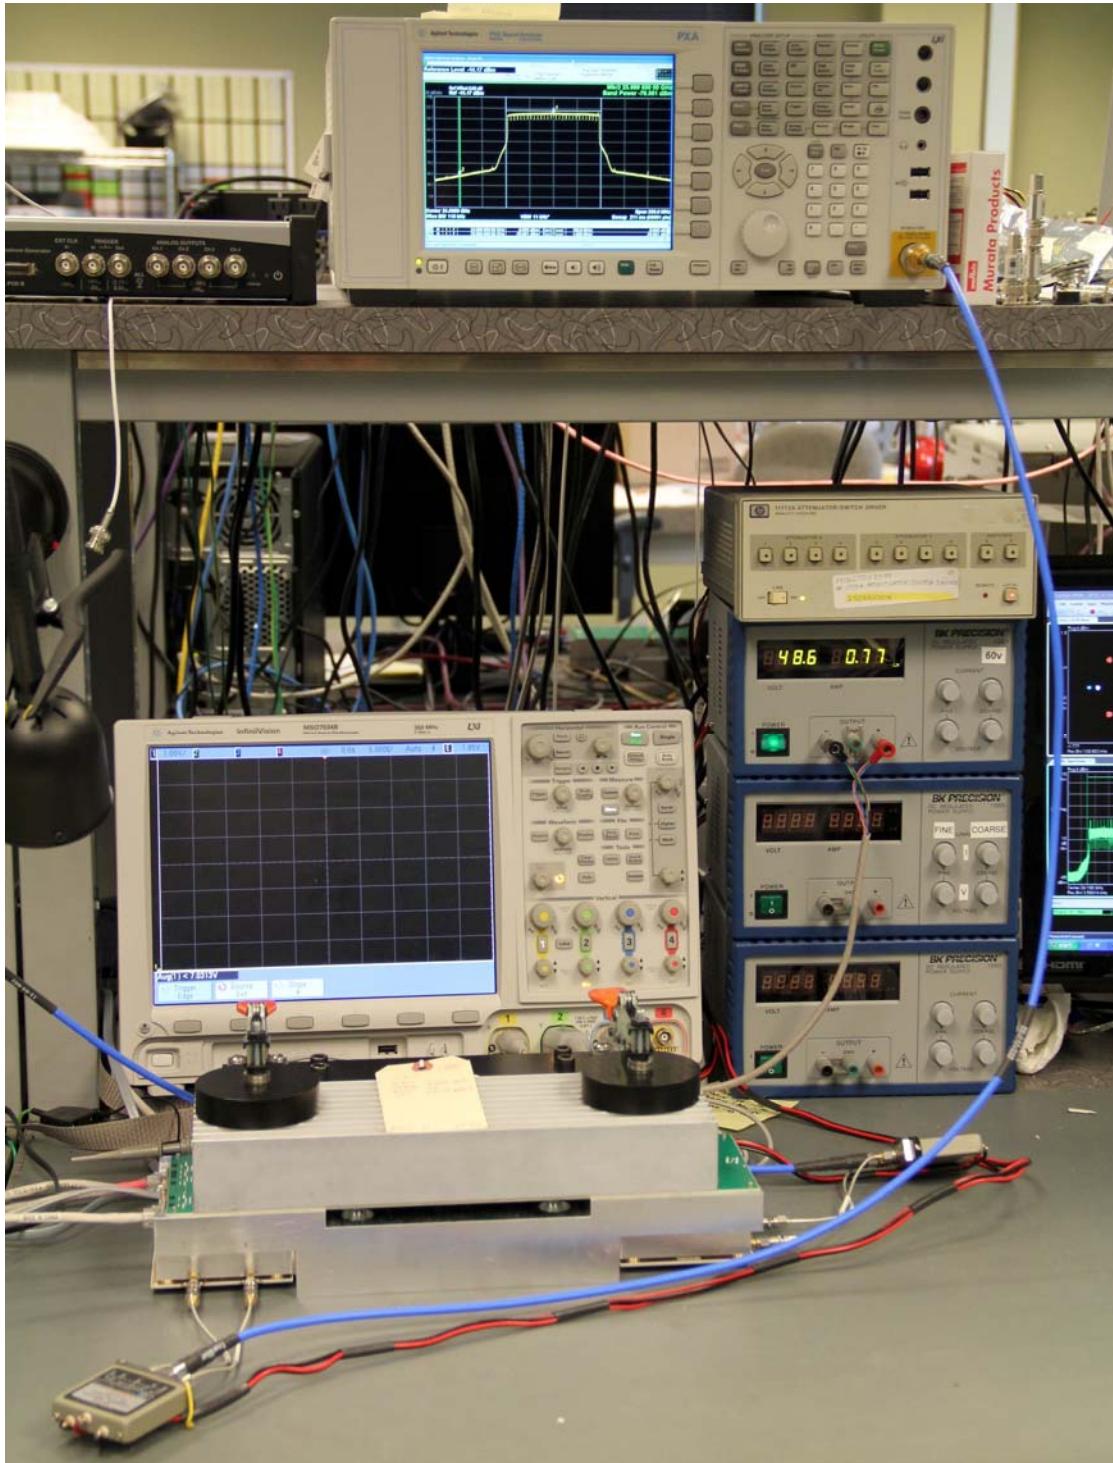

## TX1 – QPSK Modulation

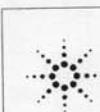

## TX1 – 256QAM Modulation

The test station configuration is shown below. The radio board uses a PCB etched OMT to launch into the fixture waveguide where a second PCB OMT picks up and conducts the signal to the measuring analyzer. A 3dB attenuator pad, RF switch (0.7dB loss) and 1m coaxial cable (2.1dB loss) is in line between the test fixture connector and the measuring analyzer.

## Certificate Of Calibration

Certificate No: 2231834-2557113-1

Manufacturer: Agilent Technologies

Description: Spectrum Analyzer

Model No: N9030A

Serial No: MY49432012

Options Installed With Specifications: 526 B1X EPI FSA LFE LNP MPB NFE NUL PFR

Date of Calibration: 29-NOV-2011

Humidity: (20 to 70)% RH

Temperature: (24 ± 4) °C

Procedure: LINE CAL - EPSG1030142

This certifies that the above product was calibrated in compliance with a quality system registered to ISO 9001:2008, using applicable Agilent Technologies' procedures.

**As Received:** Factory tested. No incoming data available.

**As Shipped Conditions:** At the completion of the calibration, measured values were IN SPECIFICATION at the points tested.

These calibration procedures and test points are those recommended in a procedure developed by Agilent.

### Remarks or special requirements:

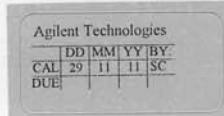

**Traceability Information:** Traceability is to the International System of Units (SI), consensus standards or ratio type measurements through national standards realized and maintained by the NIST U.S., NRC Canada, NMII Japan, KRISS Korea, Euramet members (NPL, PTB, etc.), NML-SIRIM in Malaysia or other National Measurement Institutes signatories to the CIPM MRA. Supporting documentation relative to traceability is available for review by appointment. This report shall not be reproduced, except in full, without prior written approval of the calibration facility.
