Installation Requirements

- Clear line of sight between airFiber AP and station
- Clear view of the sky for proper GPS operation
- Vertical mounting orientation
- Mounting point:
 - At least 1 m below the highest point on the structure
 - For tower installations, at least 3 m below the top of the tower
- Outdoor, shielded Category 6 (or above) cabling and shielded RJ45 connectors are required for all wired Ethernet connections.
- Surge protection should be used for all outdoor installations. We recommend that you use two Ethernet Surge Protectors, model ETH-SP-G2, one near the airFiber radio and the other at the entry point to the building. The ETH-SP-G2 will absorb power surges and safely discharge them into the ground.

Note: For guidelines about grounding and lightning protection, follow your local electrical regulatory codes.

Hardware Overview

5. Click the  icon.
6. Configure the following settings:
 - a. For one airFiber radio, enable *Access Point* mode. For the other airFiber radio (the Station), keep *Access Point* disabled.
 - b. Enter a name in the *SSID* field. This should be the same on both the AP and the Station.
 - c. In the *WPA2 Preshared Key* field, enter a combination of alphanumeric characters (0-9, A-Z, or a-z).

Note: The key is an alphanumeric password between 8 and 63 characters long.

7. Click **Save Changes**.
8. Configure each airFiber radio with a unique IP address:
 - a. Click the  icon.
 - b. Review the *Network* settings to ensure that the AP and Station each have a unique IP address. Each can get its IP address via DHCP, or use the fallback IP address.
 - **DHCP** By default DHCP client is enabled; if there is a DHCP server on your network, the airFiber radio will receive its address via DHCP.
 - **Fallback IP** If you use the fallback IP address on one radio, you must change the *IP Address* setting on the other radio. The fallback IP address is: *192.168.1.20*

Alignment

Tips

- To accurately align the airFiber radios for best performance, you **MUST** align only one end of the link at a time.
- You may need to use additional hardware to compensate for issues such as the improper orientation of a mounting pole or significant elevation differences between airFiber radios.

Establishing a Link

Adjust the aim of the *AP* and the *Station* to establish a link.

-  **Note:** The *AP* must be aimed first at the *Station* because the *Station* does not transmit any RF signal until it detects transmissions from the *AP*.

1. **AP** Visually aim the *AP* at the *Station* by loosening the Flange Nuts on the Mounting Bracket to allow adjustments to the azimuth and the elevation.

Adjust the azimuth:

Adjust the elevation:

 **Note:** Do NOT make simultaneous adjustments on the AP and Station.

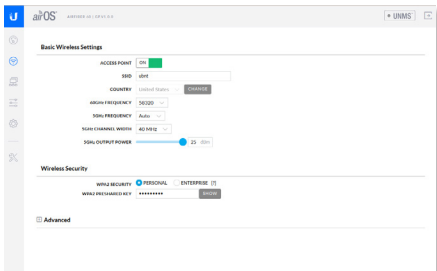

2. **Station** Visually aim the *Station* at the *AP*. To adjust the *Station's* position, adjust the azimuth and elevation as described in step 1.
3. Open the Configuration Interface. Select **Tools** and then select **Align Antenna**.
4. Check to see if a link is established. Ensure that the 60G LED or the 5G LED is solidly lit blue.
5. **Station** Aim the *Station* at the *AP* to achieve the strongest signal level on the *AP*.

 **Note:** Maximum signal strength can best be achieved by iteratively sweeping through both azimuth and elevation.

6. **AP** Aim the *AP* at the *Station* to achieve the strongest signal level on the *Station*.
7. Repeat steps 4 and 5 until you achieve an optimal link. This ensures the best possible data rate between the airFiber radios.
8. Lock the alignment on both airFiber radios by tightening all the nuts and bolts.
9. Observe the signal level of each airFiber radio to ensure that the values remain constant while tightening the nuts. If any value changes during the locking process, loosen the nuts, finalize the alignment of each airFiber radio again, and retighten the nuts.

Installer Compliance Responsibility

Devices must be professionally installed and it is the professional installer's responsibility to make sure the device is operated within local country regulatory requirements.
