

M5 Family Approval

Ubiquiti Networks is requesting the FCC to allow us to complete testing the remaining models of the M5 family with the average method since testing began before the new UNII test procedure was published and our family products must have the same channel plan.

Our products are for outdoor use only; the band edge limit for 5.25GHz is stricter for our units with the peak method. We need to continue using the average method to match the LocoM5 grant.

The LocoM5 is part of a family of 4. We need the remaining 3 models to match the LocoM5 grant.

M5 Family Models:

- LocoM5
- NanoBridgeM5
- NanoStationM5
- PowerBridgeM5
