

# 12. Radio Frequency Exposure

### 12.1 Applicable Standards

The measurements shown in this test report were made in accordance with the procedures given in FCC Part 2 (Section 2.1091)

Report No.: 21050017-TRFCC01

### 12.2 EUT Specification

Frequency band	☐ WLAN: 2412MHz ~ 2462MHz					
(Operating)	⊠ Bluetooth: 2402MHz ~ 2480MHz					
Davisa satagami	☐ Portable (<20cm separation)					
Device category						
Exposure	Occupational/Controlled exposure					
classification	☐ General Population/Uncontrolled exposure					
	Single antenna					
	☐ Multiple antennas					
Antenna diversity	☐ Tx diversity					
	☐ Rx diversity					
	☐ Tx/Rx diversity					
<b>Evaluation applied</b>	SAR Evaluation					
	□ N/A					
Remark:						
1. The maximum cond	ducted output power is <u>10.51dBm (11.246mW)</u> at <u>2480MHz</u> (with <u>1.7dB</u>					
antenna gain.)	10000 00400 porror 10 1000 100 100 100 100 100 100 100 10					
2. DTS device is not subject to routine RF evaluation; MPE estimate is used to justify the						
compliance.	abject to reduine rure evaluation, will be estimate to dood to justify the					
•	location transmitters, no SAR consideration applied. The maximum					
	0 mW/cm² even if the calculation indicates that the power density					
would be larger.	7 mw/sm - even in the calculation indicates that the power density					
would be larger.

#### 12.3 Test Results

No non-compliance noted.

#### 12.4 Calculation

Given 
$$E = \frac{\sqrt{30 \times P \times G}}{d}$$
 &  $S = \frac{E^2}{3770}$ 

Where E = Field strength in Volts / meter

P = Power in Watts

G = Numeric antenna gain

d = Distance in meters

S = Power density in milliwatts / square centimeter

Combining equations and re-arranging the terms to express the distance as a function of the remaining variables yields:

$$S = \frac{30 \times P \times G}{3770d^2}$$

Changing to units of mW and cm, using:

$$P(mW) = P(W) / 1000$$
 and  $d(cm) = d(m) / 100$ 

Yields

$$S = \frac{30 \times (P/1000) \times G}{3770 \times (d/100)^2} = 0.0796 \times \frac{P \times G}{d^2}$$
 Equation 1

Where d = Distance in cm

P = Power in mW

G = Numeric antenna gain

 $S = Power density in mW / cm^2$
