12. Radio Frequency Exposure

12.1 Applicable Standards

The measurements shown in this test report were made in accordance with the procedures given in FCC Part 2 (Section 2.1091)

Report No.:21050174-TRFCC03

12.2 EUT Specification

Frequency band						
(Operating)	☐ Bluetooth: 2402MHz ~ 2480MHz					
Davisa astagany	☐ Portable (<20cm separation)					
Device category						
Exposure	Occupational/Controlled exposure					
classification	Mobile (>20cm separation)					
	Single antenna					
	☐ Multiple antennas					
Antenna diversity	☐ Tx diversity					
	☐ Rx diversity					
	☐ Tx/Rx diversity					
Evaluation applied	olied SAR Evaluation					
	□ N/A					
Remark:	Single antenna Multiple antennas Tx diversity Rx diversity Tx/Rx diversity MPE Evaluation* SAR Evaluation N/A Dark: The maximum conducted output power is 18.98dBm(79.068mW) at 2437MHz (with 2.00dBi antenna gain.) The maximum conducted output power is 18.98dBm(79.068mW) at 2437MHz (with						
<u>2.00dBi antenna ga</u>	2.00dBi antenna gain.)					
2. DTS device is not subject to routine RF evaluation; MPE estimate is used to justify the						
compliance.						
For mobile or fixed location transmitters, no SAR consideration applied. The maximum						
power density is 1.0 mW/cm ² even if the calculation indicates that the power density						
would be larger.

12.3 Test Results

No non-compliance noted.

12.4 Calculation

Given
$$E = \frac{\sqrt{30 \times P \times G}}{d}$$
 & $S = \frac{E^2}{3770}$

Where E = Field strength in Volts / meter

P = Power in Watts

G = Numeric antenna gain

d = Distance in meters

S = Power density in milliwatts / square centimeter

Combining equations and re-arranging the terms to express the distance as a function of the remaining variables yields:

$$S = \frac{30 \times P \times G}{3770d^2}$$

Changing to units of mW and cm, using:

$$P(mW) = P(W) / 1000$$
 and $d(cm) = d(m) / 100$

Yields

$$S = \frac{30 \times (P/1000) \times G}{3770 \times (d/100)^2} = 0.0796 \times \frac{P \times G}{d^2}$$
 Equation 1

Where d = Distance in cm

P = Power in mW

G = *Numeric* antenna gain

 $S = Power density in mW / cm^2$
