# 12. Radio Frequency Exposure

### 12.1 Applicable Standards

The measurements shown in this test report were made in accordance with the procedures given in FCC Part 2 (Section 2.1091)

## 12.2 EUT Specification

Frequency band (Operating)	<ul> <li>□ WLAN: 2412MHz ~ 2462MHz</li> <li>□ WLAN: 5150MHz ~ 5250MHz</li> <li>□ WLAN: 5250MHz ~ 5350MHz</li> <li>□ WLAN: 5470MHz ~ 5725MHz</li> <li>□ WLAN: 5725MHz ~ 5850MHz</li> <li>☑ Bluetooth: 2402MHz ~ 2480MHz</li> </ul>					
Device category	☐ Portable (<20cm separation) ☐ Mobile (>20cm separation)					
Exposure classification	<ul> <li>☐ Occupational/Controlled exposure (S = 5mW/cm²)</li> <li>☐ General Population/Uncontrolled exposure (S=1mW/cm²)</li> </ul>					
Antenna diversity	<ul> <li>Single antenna</li> <li>Multiple antennas</li> <li>☐ Tx diversity</li> <li>☐ Rx diversity</li> <li>☐ Tx/Rx diversity</li> </ul>					
Evaluation applied	<ul><li>✓ MPE Evaluation*</li><li>✓ SAR Evaluation</li><li>✓ N/A</li></ul>					
Remark:						
<ul><li><u>antenna gain</u>.)</li><li>DTS device is not s compliance.</li><li>For mobile or fixed</li></ul>	clucted output power is 8.89dBm (7.745mW) at 2480MHz (with 0dBi subject to routine RF evaluation; MPE estimate is used to justify the location transmitters, no SAR consideration applied. The maximum of mW/cm² even if the calculation indicates that the power density					

Cerpass Technology Corp.

would be larger.

#### 12.3 Test Results

No non-compliance noted.

#### 12.4 Calculation

Given 
$$E = \frac{\sqrt{30 \times P \times G}}{d}$$
 &  $S = \frac{E^2}{3770}$ 

Where E = Field strength in Volts / meter

P = Power in Watts

G = Numeric antenna gain

*d* = *Distance in meters* 

S = Power density in milliwatts / square centimeter

Combining equations and re-arranging the terms to express the distance as a function of the remaining variables yields:

$$S = \frac{30 \times P \times G}{3770d^2}$$

Changing to units of mW and cm, using:

$$P(mW) = P(W) / 1000$$
 and  $d(cm) = d(m) / 100$ 

Yields

$$S = \frac{30 \times (P/1000) \times G}{3770 \times (d/100)^2} = 0.0796 \times \frac{P \times G}{d^2}$$
 Equation 1

Where d = Distance in cm

P = Power in mW

G = Numeric antenna gain

 $S = Power density in mW / cm^2$
