

## **Circuit Description**

The "Kama" Wireless Controller for Wii, when power on, the MCU ZPD20S2, which osc is 8MHz, will work in normal mode, will the EUT work, the EUT will receive the command from the transmitter and translate the signal to the MCU ZPD20S2 what have done, and the LED will flash, that's said the EUT working in normal states, after the MCU ZPD20S2, the result will be send to RF module ZPM00-0N, the osc is 12MHz, the RF module will send the client signal to the antenna.
