

FCC ID: SXO-K002

According to KDB 447498 D01 General RF Exposure Guidance v06, section 4.3.1

At 100 MHz to 6 GHz and for test separation distances ≤ 50 mm, the SAR test exclusion threshold is determined according to the following [(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)]

 $x [\sqrt{f(GHz)}] \le 3.0$ 

## 1. SAR test exclusion threshold

Frequency: 2 402MHz (min. separation distances = 5 mm)

SAR test exclusion thresholds (5 mm) = 3 x 5 / ( $\sqrt{2.402}$ ) = 9.678mW

| Max. Tune-up Tolerance | SAR Test Exclusion Thresholds |
|------------------------|-------------------------------|
| (mW)                   | (5mm) (mW)                    |
| 1.26                   | 9.678                         |

Calculation Value: 2 (mW) / 5 (mm) x  $\sqrt{2.402}$  = 0.62

So, Calculation value ≤ 3.0

## Remark:

- -Max. conducted power 1.26 (mW) is closet 2 (mW), so 2 (mW) was calculated.
- -When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

## 2. Conclusion: No SAR is required.
