Purpose of the Change

To whom may concern,

This letter is to declare that the changes made to the original/previous certified equipment fall in the categories of changes allowed by the corresponding class of permissive change being applied for.

There is a Line-in audio reference path from speaker to A33 line-in port. The previous version uses the electronic wire for the path connection while path connection in the new version is embedded in the new layout.

The reason and purpose of such change is that we need a reference audio from speaker to do the echo cancellation function.

RF module remains the same as original/previous certified equipment.

If you have questions or need further information, please contact the undersigned.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jackal", written over a horizontal line.

Jackal Ma

QA Manager
